Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

B1416-HFM RIGHT AUDIO OUTPUT CIRCUIT HIGH

**B1416-HFM RIGHT AUDIO OUTPUT CIRCUIT HIGH (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects high voltage on the (X704) Right Audio Output circuit.

Possible Causes
(X704) RIGHT AUDIO OUTPUT CIRCUIT OPEN
(X795) COMMON AUDIO OUTPUT CIRCUIT OPEN
(X704) RIGHT AUDIO OUTPUT CIRCUIT SHORT TO VOLTAGE
HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. (X704) RIGHT AUDIO OUTPUT CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

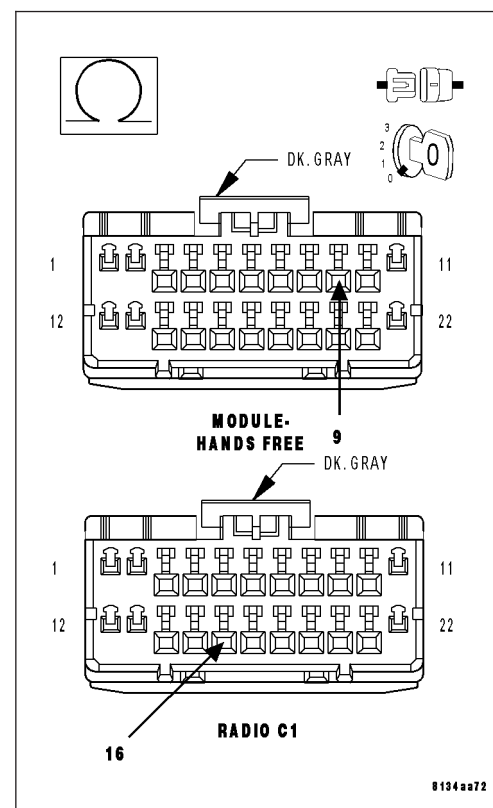

Disconnect the Radio C1 harness connector.

Measure the resistance of the (X704) Right Audio Output circuit between the HFM connector and the radio connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the (X704) Right Audio Output circuit for an open  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**B1416-HFM RIGHT AUDIO OUTPUT CIRCUIT HIGH (CONTINUED)****3. (X795) COMMON AUDIO OUTPUT CIRCUIT OPEN**

Measure the resistance of the (X795) Common Audio Output circuit between the HFM connector and the radio connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the (X795) Common Audio Output circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**4. (X704) RIGHT AUDIO OUTPUT CIRCUIT SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the (X704) Right Audio Output circuit.

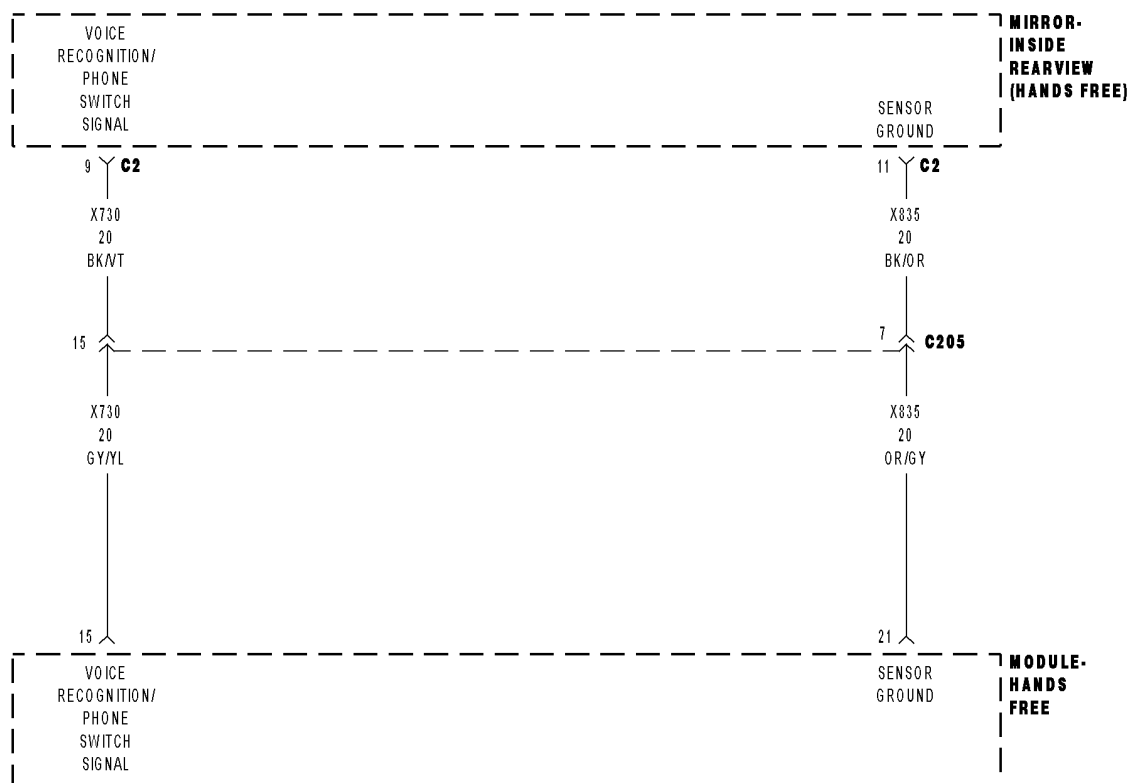

**Is the voltage above 1.0 volts?**

**Yes** >> Repair the (X704) Right Audio Output circuit for a short to voltage.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

## B1435-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT PERFORMANCE

**B1435-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT PERFORMANCE (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects an invalid voltage signal on the (X730) Voice Recognition/Phone Switch Signal circuit.

Possible Causes
INSIDE REAR VIEW MIRROR
HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. CHECK THE VOLTAGE OF THE (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL**

Turn the ignition off.

Disconnect the Inside Rear View Mirror C2 harness connector.

Turn the ignition on.

With the scan tool, monitor the VR Phone Switch voltage.

While monitoring the VR Phone Switch voltage, momentarily connect a jumper wire between the (X730) Voice Recognition/Phone Switch Signal circuit and ground.

**Note:** The scan tool sensor voltage should switch from above 4.7 volts when the jumper is not connected to below 0.6 volts when the jumper is connected.

**Does the sensor voltage switch from above 4.7 volts to below 0.6 volt as described?**

**Yes** >> Replace the Inside Rear View Mirror in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

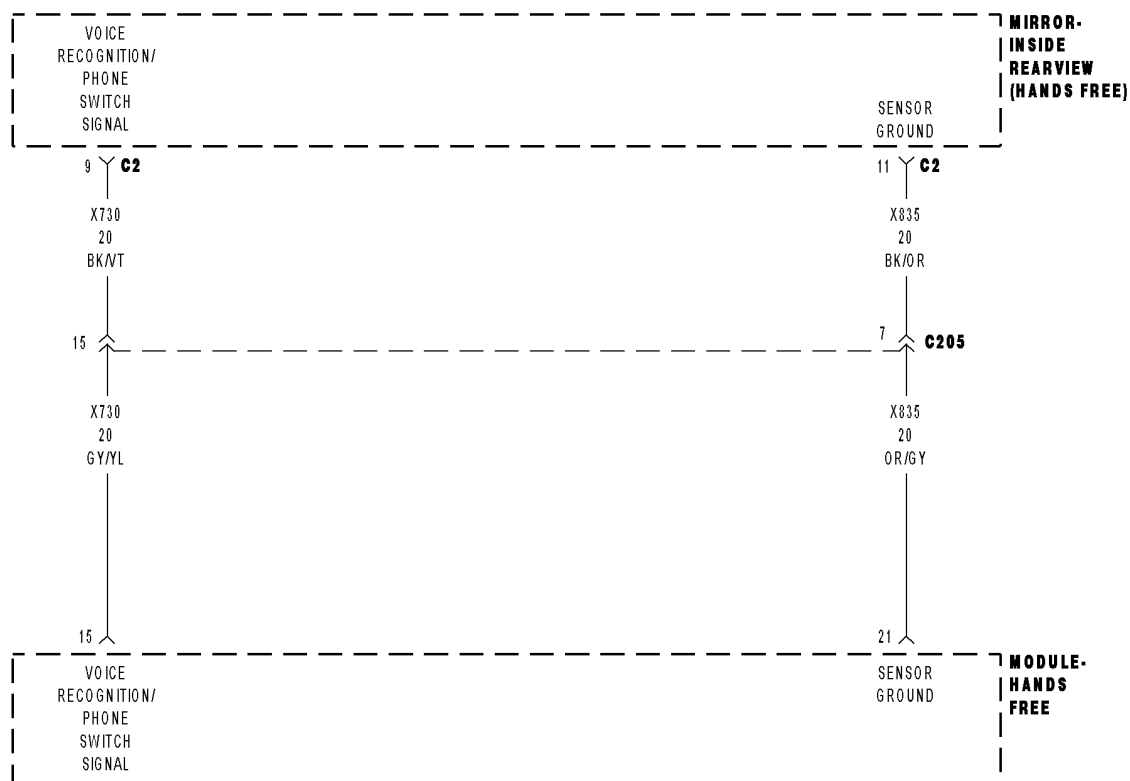

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

81348724

## B1436-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT LOW

**B1436-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT LOW (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects voltage below 0.6 volts on the (X730) Voice Recognition/Phone Switch Signal circuit.

Possible Causes
INSIDE REAR VIEW MIRROR (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT SHORT TO (X835) SENSOR GROUND CIRCUIT (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT SHORT TO GROUND HANDS FREE MODULE

**Diagnostic Test****1. Check for active DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. CHECK THE VOLTAGE OF THE (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL**

Turn the ignition off.

Disconnect the Inside Rear View Mirror C2 harness connector.

Turn the ignition on.

With the scan tool, monitor the VR Phone Switch voltage.

**Is the voltage above 4.7 volts?**

**Yes** >> Replace the Inside Rear View Mirror in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 3

**B1436-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT LOW (CONTINUED)****3. (X730) VOICE/RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT SHORTED TO THE (X835) SENSOR GROUND CIRCUIT**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

Measure the resistance between the (X730) Voice Recognition/Phone Switch Signal circuit and the (X835) Sensor Ground circuit.

**Is the resistance below 100.0 ohms?**

**Yes** >> Repair the (X730) Voice Recognition/Phone Switch Signal circuit for a short to the (X835) Sensor Ground circuit.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 4

**4. (X730) VOICE/RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (X730) Voice Recognition/Phone Switch Signal circuit.

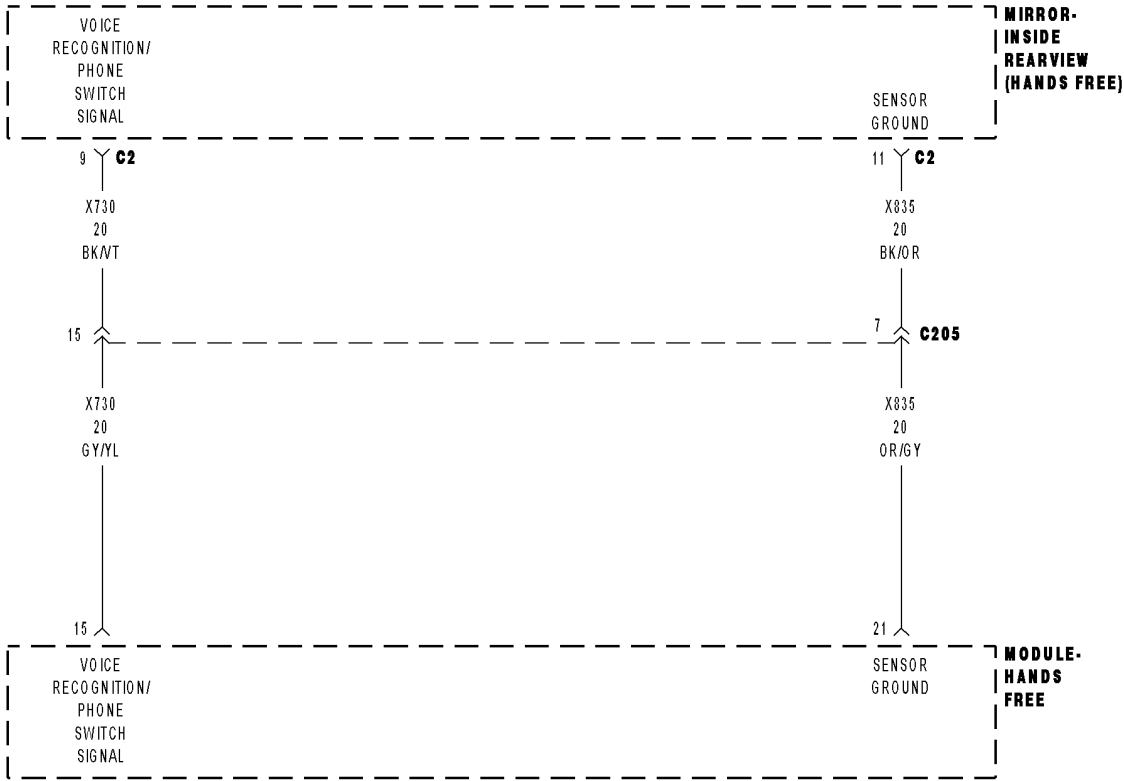

**Is the resistance below 100.0 ohms?**

**Yes** >> Repair the (X730) Voice Recognition/Phone Switch Signal circuit for a short to ground.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

B1437-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT HIGH

**B1437-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT HIGH (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects voltage above 4.7 volts on the (X730) Voice Recognition/Phone Switch Signal circuit.

Possible Causes
(X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT SHORT TO VOLTAGE
(X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT OPEN
(X835) SENSOR GROUND CIRCUIT OPEN
INSIDE REAR VIEW MIRROR
HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. CHECK THE VOLTAGE OF THE (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL**

Turn the ignition off.

Disconnect the Inside Rear View Mirror C2 harness connector.

Turn the ignition on.

Measure the voltage of the (X730) Voice Recognition/Phone Switch Signal circuit.

**Is the voltage above 5.3 volts?**

**Yes** >> Repair the (X730) Voice Recognition/Phone Switch Signal circuit for a short to voltage.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 3

**B1437-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT HIGH (CONTINUED)****3. INSIDE REAR VIEW MIRROR**

Turn the ignition off.

Connect a jumper wire between (X730) Voice Recognition/Phone Switch Signal circuit and the (X835) Sensor Ground circuit.

Turn the ignition on.

With the scan tool, monitor the VR Phone Switch Voltage.

**Is the voltage approximately 0 volts?**

**Yes** >> Replace the Inside Rear View Mirror in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 4

**4. (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

Measure the resistance of the (X730) Voice Recognition/Phone Switch Signal circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (X730) Voice Recognition/Phone Switch Signal circuit for an open.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**B1437-VOICE RECOGNITION/PHONE SWITCH INPUT CIRCUIT HIGH (CONTINUED)****5. (X835) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (X835) Sensor Ground circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

- Yes** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No** >> Repair the (X835) Sensor Ground circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

## B1438-VOICE RECOGNITION SWITCH STUCK

**B1438–VOICE RECOGNITION SWITCH STUCK (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects voltage between 3.5 volts and 4.0 volts on the (X730) Voice Recognition/Phone Switch Signal circuit for more than 30 seconds.

Possible Causes
INSIDE REAR VIEW MIRROR
HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTCS**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. CHECK THE VOLTAGE OF THE (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL**

Turn the ignition off.

Disconnect the Inside Rear View Mirror C2 harness connector.

Turn the ignition on.

With the scan tool, monitor the VR Phone Switch voltage.

While monitoring the VR Phone Switch voltage, momentarily connect a jumper wire between (X730) Voice Recognition/Phone Switch Signal circuit and ground.

**Note:** The scan tool sensor voltage should switch from above 4.7 volts when the jumper is not connected to below 0.6 volts when the jumper is connected.

**Does the sensor voltage switch from above 4.7 volts to below 0.6 volt as described?**

**Yes** >> Replace the Inside Rear View Mirror in accordance with the service information.

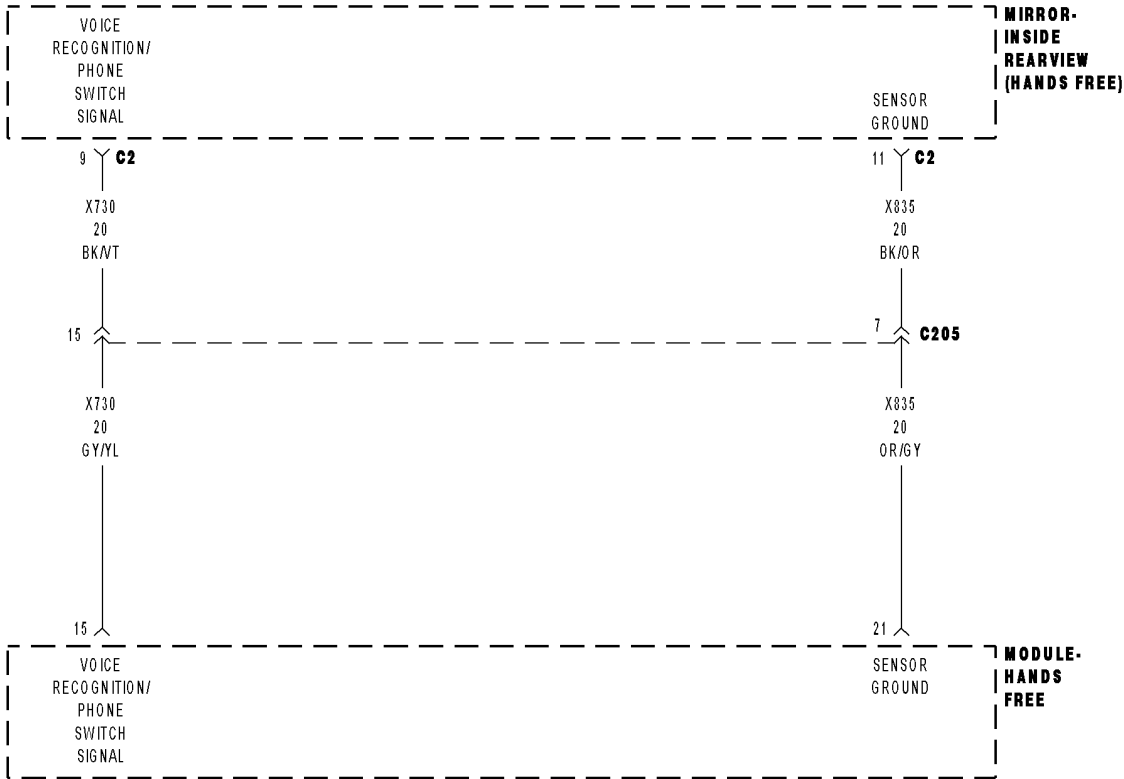

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

B1439-PHONE SWITCH STUCK

**B1439-PHONE SWITCH STUCK (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects voltage between 2.8 volts and 3.3 volts on the (X730) Voice Recognition/Phone Switch Signal circuit for more than 30 seconds.

Possible Causes
INSIDE REAR VIEW MIRROR
HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTCS**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**2. CHECK THE VOLTAGE OF THE (X730) VOICE RECOGNITION/PHONE SWITCH SIGNAL**

Turn the ignition off.

Disconnect the Inside Rear View Mirror C2 harness connector.

Turn the ignition on.

With the scan tool, monitor the VR Phone Switch voltage.

While monitoring the VR Phone Switch voltage, momentarily connect a jumper wire between (X730) Voice Recognition/Phone Switch Signal circuit and ground.

**Note:** The scan tool sensor voltage should switch from above 4.7 volts when the jumper is not connected to below 0.6 volts when the jumper is connected.

**Does the sensor voltage switch from above 4.7 volts to below 0.6 volt as described?**

**Yes** >> Replace the Inside Rear View Mirror in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**B145A-TELEMATICS MIRROR CONTROL CIRCUIT HIGH**

**B145A-TELEMATICS MIRROR CONTROL CIRCUIT HIGH (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects high voltage on the (X793) Microphone Feed circuit.

Possible Causes
(X793) MICROPHONE FEED CIRCUIT OPEN (X793) MICROPHONE FEED CIRCUIT SHORT TO VOLTAGE INSIDE REAR VIEW MIRROR HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

---

**B145A-TELEMATICS MIRROR CONTROL CIRCUIT HIGH (CONTINUED)****2. (X793) MICROPHONE FEED CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

Disconnect the Inside Rear View Mirror C2 harness connector.

Measure the resistance of the (X793) Microphone Feed circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the (X793) Microphone Feed circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**3. (X793) MICROPHONE FEED CIRCUIT SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the (X793) Microphone Feed circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the (X793) Microphone Feed circuit for short to voltage.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 4

**B145A-TELEMATICS MIRROR CONTROL CIRCUIT HIGH (CONTINUED)****4. INSIDE REAR VIEW MIRROR**

Replace the Inside Rear View Mirror in accordance with the service information.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Repair is complete.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

---

B1459-TELEMATICS MIRROR CONTROL CIRCUIT LOW

**B1459-TELEMATICS MIRROR CONTROL CIRCUIT LOW (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects low voltage on the (X793) Microphone Feed circuit.

Possible Causes
(X793) MICROPHONE FEED CIRCUIT OPEN (X793) MICROPHONE FEED CIRCUIT SHORT TO GROUND INSIDE REAR VIEW MIRROR HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

---

**B1459-TELEMATICS MIRROR CONTROL CIRCUIT LOW (CONTINUED)****2. (X793) MICROPHONE FEED CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

Disconnect the Inside Rear View Mirror C2 harness connector.

Measure the resistance of the (X793) Microphone Feed circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the (X793) Microphone Feed circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**3. (X793) MICROPHONE FEED CIRCUIT SHORT TO GROUND**

Measure the resistance between ground and the (X793) Microphone Feed circuit

**Is the resistance below 100.0 ohms?**

**Yes** >> Repair the (X793) Microphone Feed circuit for short to ground.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 4

**B1459-TELEMATICS MIRROR CONTROL CIRCUIT LOW (CONTINUED)****4. INSIDE REAR VIEW MIRROR**

Replace the Inside Rear View Mirror in accordance with the service information.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Repair is complete.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

---

B1492-GENERAL MICROPHONE PERFORMANCE

**B1492–GENERAL MICROPHONE PERFORMANCE (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault in any of the microphone circuits.

Possible Causes
(X712) MICROPHONE 1 IN (+) CIRCUIT OPEN (X722) MICROPHONE 2 IN (+) CIRCUIT OPEN (X792) MICROPHONE IN (-) CIRCUIT OPEN (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TO GROUND (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TO VOLTAGE (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TOGETHER INSIDE REAR VIEW MIRROR HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTC**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

---

**B1492-GENERAL MICROPHONE PERFORMANCE (CONTINUED)****2. (X712) MICROPHONE 1 IN (+) CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Hands Free Module harness connector.

Disconnect the Inside Rear View Mirror C2 harness connector.

Measure the resistance of the (X712) Microphone 1 IN (+) circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the (X712) Microphone 1 IN (+) circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**3. (X722) MICROPHONE 2 IN (+) CIRCUIT OPEN**

Measure the resistance of the (X722) Microphone 2 IN (+) circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the (X722) Microphone 2 IN (+) circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**B1492-GENERAL MICROPHONE PERFORMANCE (CONTINUED)****4. (X792) MICROPHONE IN (-) CIRCUIT OPEN**

Measure the resistance of the (X792) Microphone IN (-) circuit between the HFM connector and the inside rear view mirror connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (X792) Microphone IN (-) circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**5. (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TO GROUND**

Measure the resistance between ground and each (X712) (X722) (X792) Microphone circuit.

**Is the resistance below 100.0 ohms?**

**Yes** >> Repair the Microphone circuit that measured below 100.0 ohms for short to ground.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 6

**B1492-GENERAL MICROPHONE PERFORMANCE (CONTINUED)****6. (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TO VOLTAGE**

Turn the ignition on.

Measure the voltage of each (X712) (X722) (X792) Microphone circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Microphone circuit that measured above 1.0 volt for short to voltage.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 7

**7. (X712) (X722) (X792) MICROPHONE CIRCUITS SHORTED TOGETHER**

Turn the ignition off.

Measure the resistance between each (X712) (X722) (X792) Microphone circuit.

**Is the resistance below 100.0 ohms?**

**Yes** >> Repair the Microphone circuit that measured below 100.0 ohms for a short together.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Go To 8

**B1492-GENERAL MICROPHONE PERFORMANCE (CONTINUED)****8. INSIDE REAR VIEW MIRROR**

Replace the Inside Rear View Mirror in accordance with the service information.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

Attempt to make a phone call with the system.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Repair is complete.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

---

**B2203—ROM CHECKSUM PERFORMANCE**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault during an internal diagnostic check.

Possible Causes
HANDS FREE MODULE

**Diagnostic Test****1. REPLACE THE HANDS FREE MODULE IF DTC IS ACTIVE**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

- Yes** >> Replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.
-

## B222A-VEHICLE LINE MISMATCH

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module will receive and monitor the vehicle line message from the PCM and record the vehicle line if different from the last vehicle line.

Possible Causes
INCORRECT PCM
HANDS FREE MODULE

### Diagnostic Test

#### 1. CHECK FOR ACTIVE DTC

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

---

#### 2. CHECK VEHICLE LINE IN PCM

With the scan tool compare the vehicle line that is programmed into the PCM to the vehicle line of the vehicle.

**Does the vehicle line programmed into the PCM match the vehicle?**

**Yes** >> Inspect the wiring and connectors for damage or shorted circuits. If ok, replace and program the Hands Free Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Replace and program the Powertrain Control Module in accordance with the service information. Ensure the PCM is replaced with the correct vehicle line PCM.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

---

**B222E–FLASH CHECKSUM PERFORMANCE**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault during an internal diagnostic check.

Possible Causes
HANDS FREE MODULE

**Diagnostic Test**

**1. REPLACE THE HANDS FREE MODULE IF DTC IS ACTIVE**

With the scan tool, read the active DTC's.  
Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.  
With the scan tool, read the active DTC's.

- Does the scan tool display this DTC as active?**
- Yes**    >> Replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No**    >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.
-

**B222F–FLASH WRITE PERFORMANCE**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault during an internal diagnostic check.

Possible Causes
HANDS FREE MODULE

**Diagnostic Test****1. REPLACE THE HANDS FREE MODULE IF DTC IS ACTIVE**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

- Yes** >> Replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.
-

**B2223-(HFM) HANDS FREE PHONE INTERNAL**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault during an internal diagnostic check.

Possible Causes
HANDS FREE MODULE

**Diagnostic Test**

**1. REPLACE THE HANDS FREE MODULE IF DTC IS ACTIVE**

With the scan tool, read the active DTC's.  
Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.  
With the scan tool, read the active DTC's.

- Does the scan tool display this DTC as active?**
- Yes**    >> Replace and program the Hands Free Module in accordance with the service information.  
          Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No**      >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.
-

**B2230—RAM WRITE PERFORMANCE**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
The Hands Free Module detects a fault during an internal diagnostic check.

Possible Causes
HANDS FREE MODULE

**Diagnostic Test****1. REPLACE THE HANDS FREE MODULE IF DTC IS ACTIVE**

With the scan tool, read the active DTC's.

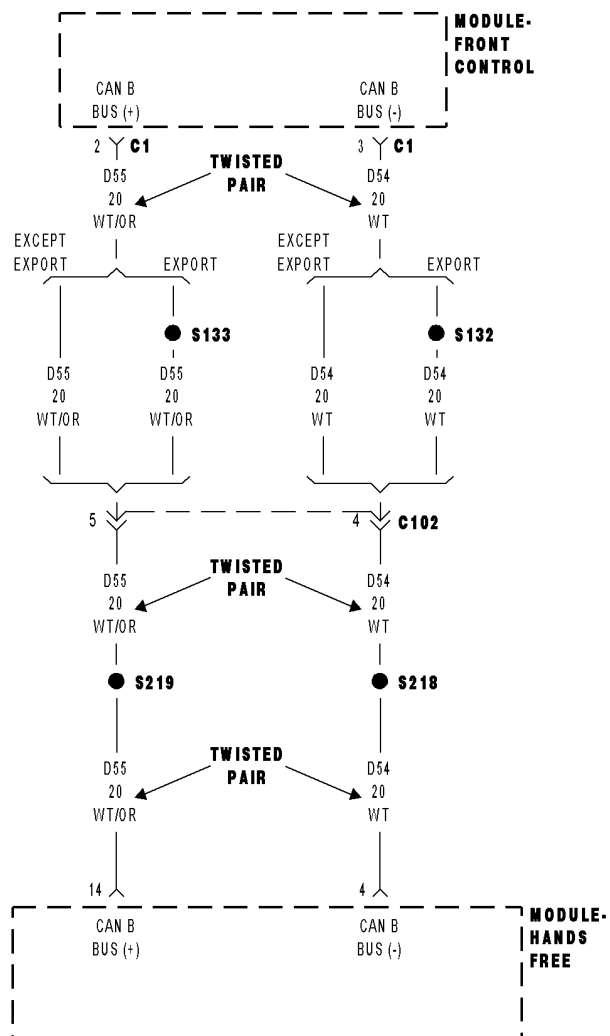

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

- Yes** >> Replace and program the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).
- No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.
-

# U0019—CAN B BUS

**U0019–CAN B BUS (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Continuously
- **Set Condition:**  
Whenever the CAN B Bus (+) or CAN B Bus (-) circuit is open, shorted to voltage or shorted to ground.

Possible Causes
CAN B BUS DTC's IN FRONT CONTROL MODULE (D55) CAN B BUS (+) CIRCUIT OPEN (D54) CAN B BUS (-) CIRCUIT OPEN HANDS FREE MODULE

**Diagnostic Test****1. CHECK FOR ACTIVE DTCs**

With the scan tool, read the active DTC's.

Cycle the ignition switch from off to on at least 5 times, leaving the ignition on for a minimum of 90 seconds per cycle.

With the scan tool, read the active DTC's.

**Does the scan tool display this DTC as active?**

**Yes** >> Go To 2

**No** >> If the DTC is stored, check for an intermittent condition. Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

---

**2. CHECK FRONT CONTROL MODULE DTC's**

With the scan tool, read Front Control Module active DTC's

**Does the scan tool display any CAN B BUS DTC's – ACTIVE?**

**Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**U0019-CAN B BUS (CONTINUED)****3. (D55) CAN B BUS (+) CIRCUIT OPEN**

Turn the ignition off.

Disconnect the negative battery cable.

Disconnect the Hands Free Module connector.

Disconnect the Front Control Module C1 connector.

Measure the resistance of the (D55) CAN B Bus (+) circuit between the Front Control Module C1 connector and the Hands Free Module connector.

**Is the resistance below 2.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the (D55) CAN B Bus (+) circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**4. (D54) CAN B BUS (–) CIRCUIT OPEN**

Measure the resistance of the (D54) CAN B Bus (–) circuit between the Front Control Module C1 connector and the Hands Free Module connector.

**Is the resistance below 2.0 ohms?**

**Yes** >> Replace the Hands Free Module in accordance with the service information.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**No** >> Repair the (D54) CAN B Bus (–) circuit for an open.  
Perform BODY VERIFICATION TEST – VER 1. (Refer to BODY VERIFICATION TEST – VER 1).

**U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0151-LOST COMMUNICATION WITH OCCUPANT RESTRAINT CONTROLLER**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0154-LOST COMMUNICATION WITH OCCUPANT CLASSIFICATION MODULE**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0155-LOST COMMUNICATION WITH CLUSTER/CCN**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0156-LOST COMMUNICATION WITH EOM**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0159-LOST COMMUNICATION WITH PARKING ASSIST CONTROL MODULE**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0164-LOST COMMUNICATION WITH HVAC CONTROL MODULE**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0168-LOST COMMUNICATION WITH VEHICLE SECURITY CONTROL MODULE (SKREEM/WCM)**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

**U0169-LOST COMMUNICATION WITH SUNROOF CONTROL MODULE**

For a complete wiring diagram **Refer to Section 8W.**

**(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)** for the diagnostic test procedure.

## **U0181-LOST COMMUNICATION WITH HEADLAMP LEVELING TRANSLATOR**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0184-LOST COMMUNICATION WITH RADIO**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0186-LOST COMMUNICATION WITH AUDIO AMPLIFIER**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0195-LOST COMMUNICATION WITH SDARS**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0199-LOST COMMUNICATION WITH DRIVER DOOR MODULE**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0200-LOST COMMUNICATION WITH PASSENGER DOOR MODULE**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0208-LOST COMMUNICATION WITH HEATED SEAT CONTROL MODULE**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0209-LOST COMMUNICATION WITH MEMORY SEAT CONTROL MODULE**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0212-LOST COMMUNICATION WITH SCCM - CAN B**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## **U0231-LOST COMMUNICATION WITH RAIN SENSING MODULE**

For a complete wiring diagram Refer to Section 8W.

(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic test procedure.

## NAVIGATION/TELECOMMUNICATION - SERVICE INFORMATION

### DESCRIPTION

#### TELECOMMUNICATIONS

The hands-free cellular system uses Bluetooth™ technology to provide wireless communication between the operator's compatible cellular telephone and the vehicle's on-board receiver.

The system uses voice recognition technology to control operation. The incoming voice is broadcast through the vehicle's radio speakers, automatically overriding any other audio signals on the front speakers when the hands-free system is in use. A microphone in the rear view mirror receives the vehicle occupant's voices. If a call is in progress when the ignition is switched off, the hands-free system will continue to operate for up to 45 seconds as part of the Accessory Relay Delay function. Thereafter, the call can continue on the hand-held telephone.

The system will communicate with a telephone that is anywhere within the vehicle. However, covering the hand held phone or the hands-free phone module with a metal object may block the signal. The system will recognize up to seven telephones, each of which is given a spoken identification by the user during the setup process. The system includes Spanish and French voice recognition in addition to English.

Two buttons on the rearview mirror, identified with ISO icons, control the system: A "phone" button turns the system on and off; a "voice recognition" (or voice command) button prompts the hands-free system to listen for a voice command.

### OPERATION

#### TELECOMMUNICATION

Two buttons on the rearview mirror, identified with ISO icons, control the system: A "phone" button turns the system on and off; a "voice recognition" (or voice command) button prompts the hands-free system to listen for a voice command. The system includes the following features:

- Phonebook - Stores telephone numbers for later recall by name or other verbal identification, called a voice tag, and memory location.
- Four memory locations - Home, Work, Cellular and Pager. A maximum of 32 unique names or voice tags may be stored at the same time, with a different number in each of the four memory locations.
- Voice tag dialing - Dials the number associated with a voice tag and memory location.
- Digit dialing - Dials the telephone number by recognizing the names of the digits as they are spoken.
- Receiving calls - A voice prompt notifies the user of an incoming call. A voice response accepts or rejects the call without manual intervention.
- Privacy Mode - Switches the call to the handheld telephone and the hands-free system and back again using the "voice recognition" (or "voice command") button and a voice command, if desired.

## DIAGNOSIS AND TESTING - TELECOMMUNICATION

Any diagnosis of the Telecommunication system should begin with the use of scan tool. For information on the use of the scan tool, refer to the appropriate Diagnostic Service information.

For complete circuit diagrams, refer to the appropriate wiring information.

**WARNING: ON VEHICLES EQUIPPED WITH AIRBAGS, REFER TO ELECTRICAL, RESTRAINTS BEFORE ATTEMPTING ANY STEERING WHEEL, STEERING COLUMN, OR INSTRUMENT PANEL COMPONENT DIAGNOSIS OR SERVICE. FAILURE TO TAKE THE PROPER PRECAUTIONS COULD RESULT IN ACCIDENTAL AIRBAG DEPLOYMENT AND POSSIBLE PERSONAL INJURY.**

### TELECOMMUNICATION SYSTEM DIAGNOSIS

CONDITION	POSSIBLE CAUSE	CORRECTION
Phone Not Available	1. Bluetooth phone not paired to the system.	1. Ensure that phone(s) are paired to the system.
	2. Bluetooth phone not present or turned OFF.	2. Make sure paired phone is present, turned ON and that the Bluetooth option is enabled on the phone.
	3. Bluetooth phone has low battery.	3. At low battery levels, some phones will turn off Bluetooth functionality. Ensure cellular phone is charged to an adequate level.
Phone Pairing Failed	1. Phone does not support Hands Free Profile	1. The Telecommunication system requires the cellular phone to be Bluetooth™ enabled, as well as supporting the Hands Free Profile. The customer will have to upgrade their phone to one supporting Hands Free Profile. A list of suggested phones is available at: <a href="http://www.chrysler.com/uconnect">http://www.chrysler.com/uconnect</a> .
	2. Phone not Bluetooth enabled.	2. The Telecommunication system requires the cellular phone to be Bluetooth™ enabled. A list of suggested phones is available at: <a href="http://www.chrysler.com/uconnect">http://www.chrysler.com/uconnect</a> .
	3. PIN entered on the phone is not the same as PIN spoken to the system.	3. The PIN spoken to the system must be the same PIN entered into the phone.
	4. Phone has reached maximum number of allowed devices paired.	4. Remove one of the previously paired devices from it's list.
Poor Voice Recognition	1. Microphone failure	1. Using a scan tool, check for microphone fault codes.
	2. Customer not waiting for the beep before speaking.	2. Ensure customer is waiting for the system "beep" prior to beginning the speech to be recognized.
	3. Customer not speaking in a smooth normal manner.	3. Verify that the customer is attempting to use the system with a smooth consistent voice. The system is designed to accept normal speech spoken at a normal tone, some people tend to speak to a computer loud and slow, which results in reduced performance.
	4. Rear view mirror not properly attached to mounting.	4. Mirror must be firmly mounted to the mounting location. Ensure that mirror is tightened to the specified torque.
	5. High levels of noise in vehicle compartment	5. System performance is increased when noise conditions in the vehicle are lowered. Ideal conditions include windows closed.
	6. Object interfering with microphone input	6. Verify that there is no object, hanging from the mirror, that could be obstructing the microphone.

CONDITION	POSSIBLE CAUSE	CORRECTION
	7. User not saying "send" after a pager dialing request	7. User must say "send" at the end of a Pager Dialing request.
	8. Other passengers talking while customer is attempting to use the system	8. Although designed for primary use by the driver, the microphone will pick up passengers in any seat of the vehicle. System performance is increased in low noise environments.
Phonebook names not recognized consistently	1. Phonebook names recorded in high noise conditions	1. For increased system performance, it is recommended that the phone book entries are recorded in a low noise environment. That is, vehicle in park, with windows up.
	2. Phonebook name(s) short	2. For increased performance it is recommended that the user use both first and last name as a phonebook entry. Example "James Johnson" as opposed to "James".
	3. Phonebook names recorded by another user	3. It is recommended that each user of the system record their own phonebook entries. This will increase the recognition performance.
	4. Similar names in phonebook	4. For increased system performance it is recommended that the user do not enter similar sounding names in the phonebook.
	5. Object interfering with microphone input	5. Object interfering with microphone input.
Poor Phone audio quality.	1. Microphone failure	1. Use a scan tool, and check for Microphone faults.
	2. Rear view mirror not properly fixed to mounting button	2. Mirror must be firmly mounted to the mounting location. Tighten mirror to the specified torque.
	3. System being used in high noise conditions	3. System performance is increased when noise conditions in the vehicle are lowered. Ideal conditions include windows closed.
No Phone Audio	1. Phone setting cause phone audio to be routed to handset.	1. Route audio to "Hands free" device.

## HANDS FREE MODULE

### REMOVAL

**Note:** A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).

1. Disconnect and isolate the battery negative cable.
2. Remove the glove box.
3. Disconnect the electrical harness connector.

4. Remove the mounting fasteners
5. Remove the hands free module.

## INSTALLATION

**Note:** A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).

1. Position hands free module. Install and tighten mounting fasteners.
2. Connect wire harness connector.
3. Install glove box.
4. Connect battery negative cable.

## WIRING DIAGRAM INFORMATION

## DESCRIPTION

## DESCRIPTION - HOW TO USE WIRING DIAGRAMS

DaimlerChrysler Corporation wiring diagrams are designed to provide information regarding the vehicles wiring content. In order to effectively use the wiring diagrams to diagnose and repair DaimlerChrysler Corporation vehicles, it is important to understand all of their features and characteristics.

Diagrams are arranged such that the power (B+) side of the circuit is placed near the top of the page, and the ground (B-) side of the circuit is placed near the bottom of the page.

All switches, components, and modules are shown in the at rest position with the doors closed and the key removed from the ignition.

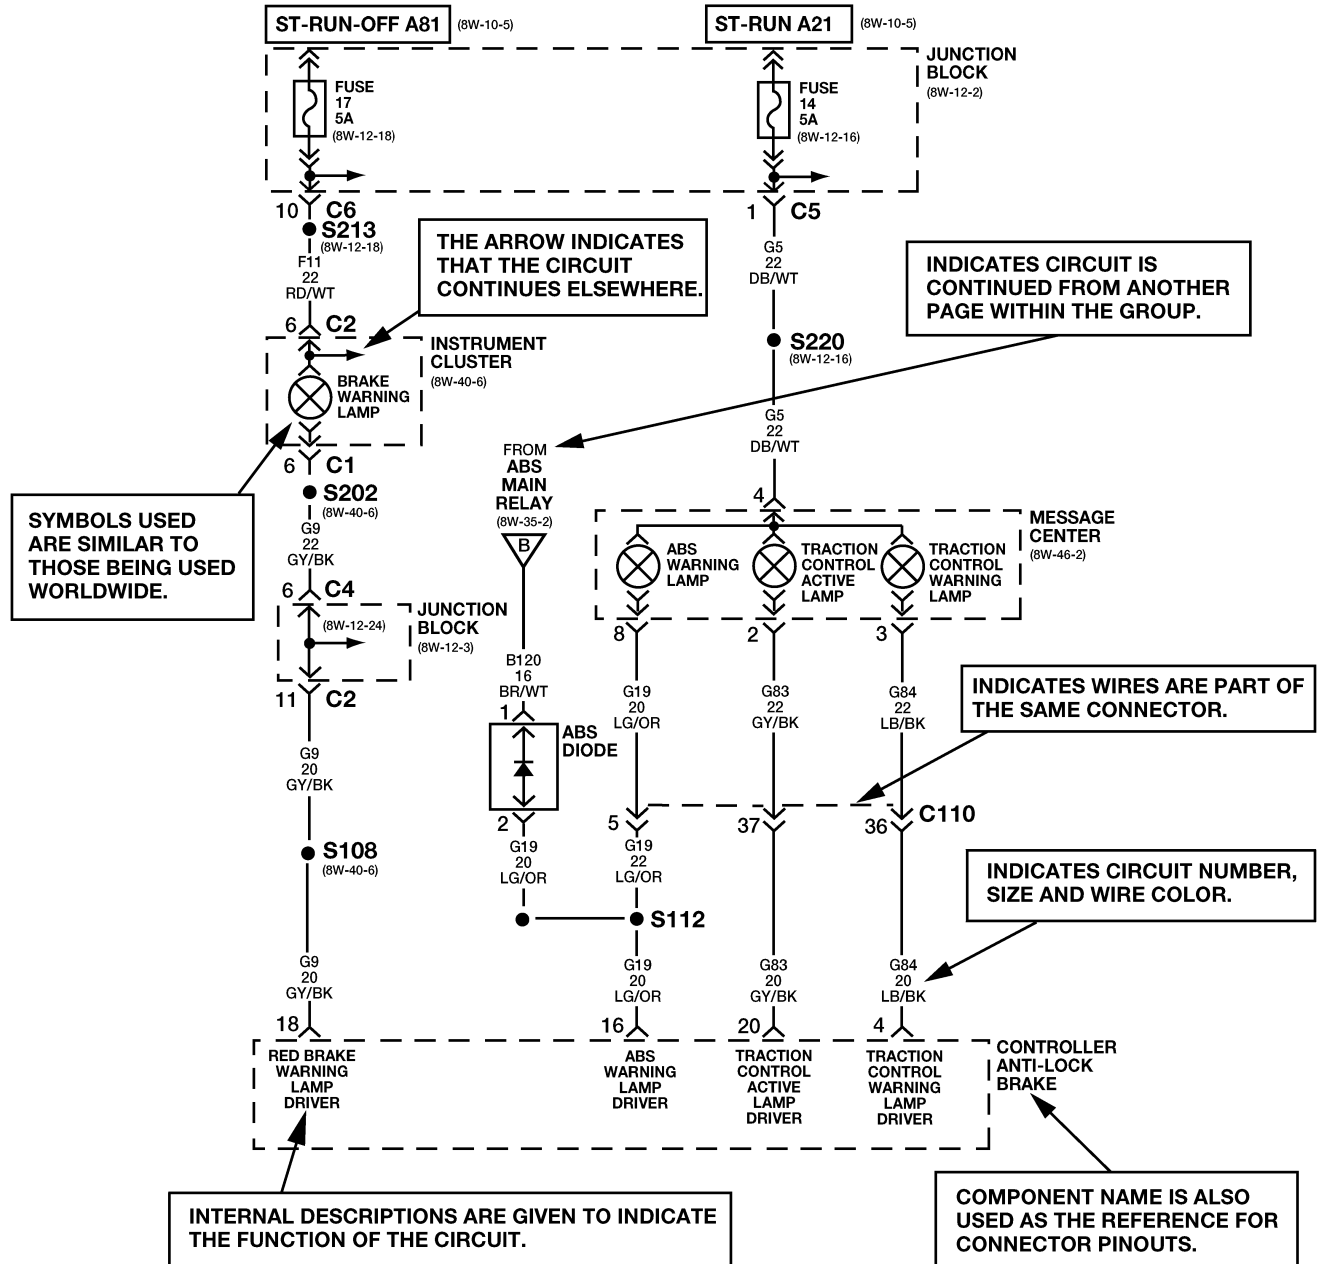

Components are shown two ways. A solid line around a component indicates that the component is complete. A dashed line around the component indicates that the component is being shown is not complete. Incomplete components have a reference number to indicate the page where the component is shown complete.

It is important to realize that no attempt is made on the diagrams to represent components and wiring as they appear on the vehicle. For example, a short piece of wire is treated the same as a long one. In addition, switches and other components are shown as simply as possible, with regard to function only.

## SYMBOLS

International symbols are used throughout the wiring diagrams. These symbols are consistent with those being used around the world.

DIAGRAMS ARE ARRANGED WITH THE POWER B+ SIDE OF THE CIRCUIT NEAR THE TOP OF THE PAGE, AND THE GROUND SIDE OF THE CIRCUIT NEAR THE BOTTOM OF THE PAGE.

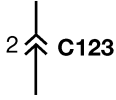

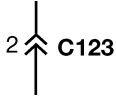

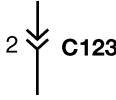

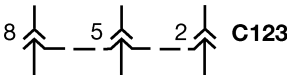

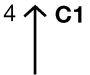

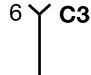

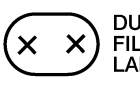

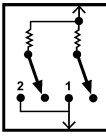

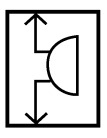

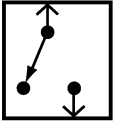

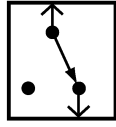

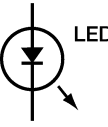

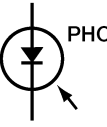

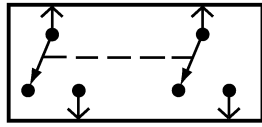

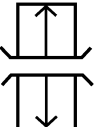

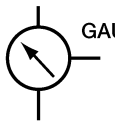

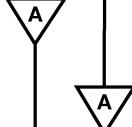

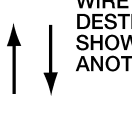

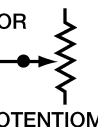

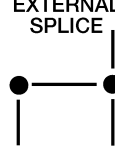

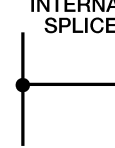

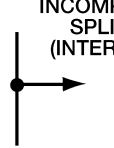

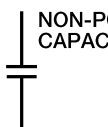

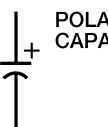

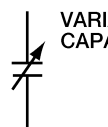

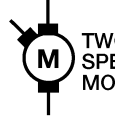

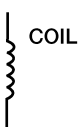

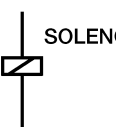

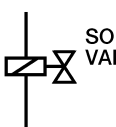

The System shown here is an **EXAMPLE ONLY**. It does not represent the actual circuit shown in the **WIRING DIAGRAM SECTION**.

**The System shown here is an EXAMPLE ONLY. It does not represent the actual circuit shown in the WIRING DIAGRAM SECTION.**

 FUSIBLE LINK  FUSE  CIRCUIT BREAKER OR PTC PROTECTION DEVICE	 BATTERY  IN-LINE CONNECTORS  2 C123  2 C123
 BATT A0 HOT BAR  CHOICE BRACKET         (8W-30-10) PAGE REFERENCE	 MULTIPLE CONNECTOR 8 C123  MALE CONNECTOR 4 C1  FEMALE CONNECTOR 6 C3
 CLOCKSPrING  GROUND G101  SCREW TERMINAL	 SINGLE FILAMENT LAMP  DUAL FILAMENT LAMP  ANTENNA
 RESISTIVE MULTIPLEX SWITCH	 NPN TRANSISTOR  PNP TRANSISTOR  TONE GENERATOR

## TERMINOLOGY

This is a list of terms and definitions used in the wiring diagrams.

LHD .....	Left Hand Drive Vehicles
RHD .....	Right Hand Drive Vehicles
ATX .....	Automatic Transmissions-Front Wheel Drive
MTX .....	Manual Transmissions-Front Wheel Drive
AT .....	Automatic Transmissions-Rear Wheel Drive
MT .....	Manual Transmissions-Rear Wheel Drive
SOHC .....	Single Over Head Cam Engine
DOHC .....	Double Over Head Cam Engine
Export .....	Vehicles Built For Sale In Markets Other Than North America
Except Export .....	Vehicles Built For Sale In North America

## DESCRIPTION - CIRCUIT INFORMATION

Each wire shown in the diagrams contains a code which identifies the main circuit, a specific part of the main circuit, gage of wire, and color. An example would be **A 2 18 LB/YL**. This is a Battery Feed circuit, level two, eighteen gauge, light blue with a yellow tracer.

## WIRE COLOR CODE CHART

COLOR CODE	COLOR
BL	BLUE
BK	BLACK
BR	BROWN
DB	DARK BLUE
DG	DARK GREEN
GY	GRAY
LB	LIGHT BLUE
LG	LIGHT GREEN
OR	ORANGE
PK	PINK
RD	RED
TN	TAN
VT	VIOLET
WT	WHITE
YL	YELLOW
*	WITH TRACER

## DESCRIPTION - CIRCUIT FUNCTIONS

All circuits in the diagrams use an alpha/numeric code to identify the wire and it's function. To identify which circuit code applies to a system, refer to the Circuit Identification Code Chart. This chart shows the main circuits only and does not show the secondary codes that may apply to some models.

### CIRCUIT IDENTIFICATION CODE CHART

CIRCUIT	FUNCTION
A	BATTERY FEED
B	BRAKE CONTROLS
C	CLIMATE CONTROLS
D	DIAGNOSTIC CIRCUITS
E	DIMMING ILLUMINATION CIRCUITS
F	FUSED CIRCUITS
G	MONITORING CIRCUITS (GAUGES)
H	MULTIPLE
I	NOT USED
J	OPEN
K	POWERTRAIN CONTROL MODULE
L	EXTERIOR LIGHTING
M	INTERIOR LIGHTING
N	MULTIPLE
O	NOT USED
P	POWER OPTION (BATTERY FEED)
Q	POWER OPTIONS (IGNITION FEED)
R	PASSIVE RESTRAINT
S	SUSPENSION/STEERING
T	TRANSMISSION/TRANSAXLE/TRANSFER CASE
U	OPEN
V	SPEED CONTROL, WIPER/WASHER
W	WIPERS
X	AUDIO SYSTEMS
Y	TEMPORARY
Z	GROUND

## DESCRIPTION - SECTION IDENTIFICATION AND INFORMATION

The wiring diagrams are grouped into individual sections. If a component is most likely found in a particular group, it will be shown complete (all wires, connectors, and pins) within that group. For example, the Auto Shutdown Relay is most likely to be found in Group 30, so it is shown there complete. It can, however, be shown partially in another group if it contains some associated wiring.

Splice diagrams in Section 8W-70 show the entire splice and provide references to other sections the splices serves. Section 8W-70 only contains splice diagrams that are not shown in their entirety somewhere else in the wiring diagrams.

Section 8W-80 shows each connector and the circuits involved with that connector. The connectors are identified using the name/number on the diagram pages.

## DESCRIPTION - CONNECTOR, GROUND AND SPLICE INFORMATION

**CAUTION:** Not all connectors are serviced. Some connectors are serviced only with a harness. A typical example might be the Supplemental Restraint System connectors. Always check parts availability before attempting a repair.

## IDENTIFICATION

In-line connectors are identified by a number, as follows:

- In-line connectors located in the engine compartment are C100 series numbers.
- In-line connectors located in the instrument panel area are C200 series numbers.
- In-line connectors located in the body are C300 series numbers.
- Jumper harness connectors are C400 series numbers.
- Grounds and ground connectors are identified with a "G" and follow the same series numbering as the in-line connectors.
- Splices are identified with an "S" and follow the same series numbering as the in-line connectors.
- Component connectors are identified by the component name instead of a number. Multiple connectors on a component use a C1, C2, etc. identifier.

## LOCATIONS

Section 8W-91 contains connector/ground/splice location illustrations. The illustrations contain the connector name (or number)/ground number/splice number and component identification. Connector/ground/splice location charts in section 8W-91 reference the figure numbers of the illustrations.

The abbreviation T/O is used in the component location section to indicate a point in which the wiring harness branches out to a component. The abbreviation N/S means Not Shown in the illustrations

## WARNING

### WARNINGS - GENERAL

**WARNINGS** provide information to prevent personal injury and vehicle damage. Below is a list of general warnings that should be followed any time a vehicle is being serviced.

**WARNING:** Always wear safety glasses for eye protection.

**WARNING:** Use safety stands anytime a procedure requires being under a vehicle.

**WARNING:** Be sure that the ignition switch always is in the off position, unless the procedure requires it to be on.

**WARNING:** Set the parking brake when working on any vehicle. An automatic transmission should be in park. A manual transmission should be in neutral.

**WARNING:** Operate the engine only in a well-ventilated area.

**WARNING:** Keep away from moving parts when the engine is running, especially the fan and belts.

**WARNING:** To prevent serious burns, avoid contact with hot parts such as the radiator, exhaust manifold(s), tail pipe, catalytic converter and muffler.

**WARNING:** Do not allow flame or sparks near the battery. Gases are always present in and around the battery.

**WARNING:** Always remove rings, watches, loose hanging jewelry and avoid loose clothing.

## DIAGNOSIS AND TESTING - WIRING HARNESS

### TROUBLESHOOTING TOOLS

When diagnosing a problem in an electrical circuit there are several common tools necessary. These tools are listed and explained below.

- Jumper Wire - This is a test wire used to connect two points of a circuit. It can be used to bypass an open in a circuit.

**WARNING:** Never use a jumper wire across a load, such as a motor, connected between a battery feed and ground.

- Voltmeter - Used to check for voltage on a circuit. Always connect the black lead to a known good ground and the red lead to the positive side of the circuit.

**CAUTION:** Most of the electrical components used in today's vehicles are Solid State. When checking voltages in these circuits, use a meter with a 10 - megohm or greater impedance rating.

- Ohmmeter - Used to check the resistance between two points of a circuit. Low or no resistance in a circuit means good continuity.

**CAUTION:** Most of the electrical components used in today's vehicles are Solid State. When checking resistance in these circuits use a meter with a 10 - megohm or greater impedance rating. In addition, make sure the power is disconnected from the circuit. Circuits that are powered up by the vehicle's electrical system can cause damage to the equipment and provide false readings.

- Probing Tools - These tools are used for probing terminals in connectors. Select the proper size tool from Special Tool Package 6807, and insert the probing end (2) into the terminal being tested. Use the other end of the tool (1) to insert the meter probe.

### INTERMITTENT AND POOR CONNECTIONS

Most intermittent electrical problems are caused by faulty electrical connections or wiring. It is also possible for a sticking component or relay to cause a problem. Before condemning a component or wiring assembly, check the following items.

- Connectors are fully seated
- Spread terminals, or terminal push out
- Terminals in the wiring assembly are fully seated into the connector/component and locked into position
- Dirt or corrosion on the terminals. Any amount of corrosion or dirt could cause an intermittent problem
- Damaged connector/component casing exposing the item to dirt or moisture
- Wire insulation that has rubbed through causing a short to ground
- Some or all of the wiring strands broken inside of the insulation
- Wiring broken inside of the insulation

## TROUBLESHOOTING WIRING PROBLEMS

When troubleshooting wiring problems there are six steps which can aid in the procedure. The steps are listed and explained below. Always check for non-factory items added to the vehicle before doing any diagnosis. If the vehicle is equipped with these items, disconnect them to verify these add-on items are not the cause of the problem.

1. Verify the problem.
2. Verify any related symptoms. Do this by performing operational checks on components that are in the same circuit. Refer to the wiring diagrams.
3. Analyze the symptoms. Use the wiring diagrams to determine what the circuit is doing, where the problem most likely is occurring and where the diagnosis will continue.
4. Isolate the problem area.
5. Repair the problem area.
6. Verify the proper operation. For this step, check for proper operation of all items on the repaired circuit. Refer to the wiring diagrams.

## STANDARD PROCEDURE

### STANDARD PROCEDURE - ELECTROSTATIC DISCHARGE (ESD) SENSITIVE DEVICES

All ESD sensitive components are solid state and a symbol is used to indicate this. When handling any component with this symbol, comply with the following procedures to reduce the possibility of electrostatic charge build up on the body and inadvertent discharge into the component. If it is not known whether the part is ESD sensitive, assume that it is.

1. Always touch a known good ground before handling the part. This should be repeated while handling the part and more frequently after sliding across a seat, sitting down from a standing position, or walking a distance.
2. Avoid touching electrical terminals of the part, unless instructed to do so by a written procedure.
3. When using a voltmeter, be sure to connect the ground lead first.
4. Do not remove the part from its protective packing until it is time to install the part.
5. Before removing the part from its package, ground the package to a known good ground on the vehicle.

## STANDARD PROCEDURE - TESTING OF VOLTAGE POTENTIAL

1. Connect the ground lead of a voltmeter to a known good ground.
2. Connect the other lead of the voltmeter to the selected test point. The vehicle ignition may need to be turned ON to check voltage. Refer to the appropriate test procedure.

## STANDARD PROCEDURE - TESTING FOR CONTINUITY

1. Remove the fuse (1) for the circuit being checked or, disconnect the battery.
2. Connect one lead of the ohmmeter to one side of the circuit being tested
3. Connect the other lead to the other end of the circuit being tested. Low or no resistance means good continuity.

## STANDARD PROCEDURE - TESTING FOR A SHORT TO GROUND

1. Remove the fuse and disconnect all items involved with the fuse.
2. Connect a test light or a voltmeter across the terminals of the fuse.
3. Starting at the fuse block, wiggle the wiring harness about six to eight inches apart and watch the voltmeter/test lamp.
4. If the voltmeter registers voltage or the test lamp glows, there is a short to ground in that general area of the wiring harness.

## STANDARD PROCEDURE - TESTING FOR A SHORT TO GROUND ON FUSES POWERING SEVERAL LOADS

1. Refer to the wiring diagrams and disconnect or isolate all items on the suspected fused circuits.
2. Replace the blown fuse.
3. Supply power to the fuse by turning ON the ignition switch or re-connecting the battery.
4. Start connecting or energizing the items in the fuse circuit one at a time. When the fuse blows the circuit with the short to ground has been isolated.

## STANDARD PROCEDURE - TESTING FOR A VOLTAGE DROP

1. Connect the positive lead of the voltmeter to the side of the circuit closest to the battery.
2. Connect the other lead of the voltmeter to the other side of the switch, component or circuit.
3. Operate the item.
4. The voltmeter will show the difference in voltage between the two points.

## SPECIAL TOOLS

### WIRING/TERMINAL

8091c8da

## CONNECTOR

### REMOVAL

1. Disconnect battery.
2. Release Connector Lock (2).
3. Disconnect the connector (3) being repaired from its mating half/component.
4. Remove the dress cover (if applicable) (1).

80ca8802

5. Release the Secondary Terminal Lock, if required (1).

80ca8809

- 1 - TYPICAL CONNECTOR
- 2 - PICK FROM SPECIAL TOOL KIT 6680
- 3 - APEX CONNECTOR
- 4 - PICK FROM SPECIAL TOOL KIT 6680
- 5 - AUGAT CONNECTOR
- 6 - SPECIAL TOOL 6932

- 7 - MOLEX CONNECTOR
- 8 - SPECIAL TOOL 6742
- 9 - THOMAS AND BETTS CONNECTOR
- 10 - SPECIAL TOOL 6934
- 11 - TYCO CONNECTOR
- 12 - SPECIAL TOOL 8638

6. Position the connector locking finger away from the terminal using the proper special tool. Pull on the wire to remove the terminal from the connector.

## INSTALLATION

1. Insert the removed terminal in the same cavity on the repair connector.
2. Repeat steps for each terminal in the connector, being sure that all wires are inserted into the proper cavities. For additional connector pin-out identification, refer to the wiring diagrams.
3. When the connector is re-assembled, the secondary terminal lock must be placed in the locked position to prevent terminal push out.
4. Replace dress cover (if applicable).
5. Connect connector to its mating half/component.
6. Connect battery and test all affected systems.

## DIODE

### REMOVAL

1. Disconnect the battery.
2. Locate the diode in the harness, and remove the protective covering.
3. Remove the diode from the harness, pay attention to the current flow direction (1) (2) (3).

### INSTALLATION

1. Remove the insulation from the wires in the harness. Only remove enough insulation to solder in the new diode.
2. Install the new diode in the harness, making sure current flow is correct. If necessary, refer to the appropriate wiring diagram for current flow.
3. Solder the connection together using rosin core type solder only. **Do not use acid core solder.**
4. Tape the diode to the harness using electrical tape. Make sure the diode is completely sealed from the elements.
5. Re-connect the battery and test affected systems.

## TERMINAL

### REMOVAL

1. Follow steps for removing terminals described in the connector removal section.
2. Cut the wire 6 inches from the back of the connector.

### INSTALLATION

1. Select a wire from the terminal repair kit that best matches the color and gage of the wire being repaired.
2. Cut the repair wire to the proper length and remove one-half (1/2) inch of insulation.
3. Splice the repair wire to the wire harness (see wire splicing procedure).
4. Insert the repaired wire into the connector.
5. Install the connector locking wedge, if required, and reconnect the connector to its mating half/component.
6. Re-tape the wire harness starting at 1-1/2 inches behind the connector and 2 inches past the repair.
7. Connect battery and test all affected systems.

## WIRE

### STANDARD PROCEDURE - WIRE SPLICING

When splicing a wire, it is important that the correct gage be used as shown in the wiring diagrams.

1. Remove one-half (1/2) inch of insulation from each wire that needs to be spliced.
2. Place a piece of adhesive lined heat shrink tubing on one side of the wire. Make sure the tubing will be long enough to cover and seal the entire repair area.
3. Place the strands of wire overlapping each other inside of the splice clip (1).
4. Using crimping tool (1), Mopar p/n 05019912AA, crimp the splice clip and wires together.

5. Solder (3) the connection (2) together using rosin core type solder (1) only.

### CAUTION: DO NOT USE ACID CORE SOLDER.

6. Center the heat shrink tubing (2) over the joint and heat using a heat gun. Heat the joint until the tubing is tightly sealed and sealant (1) comes out of both ends of the tubing.

## 8W-15 GROUND DISTRIBUTION

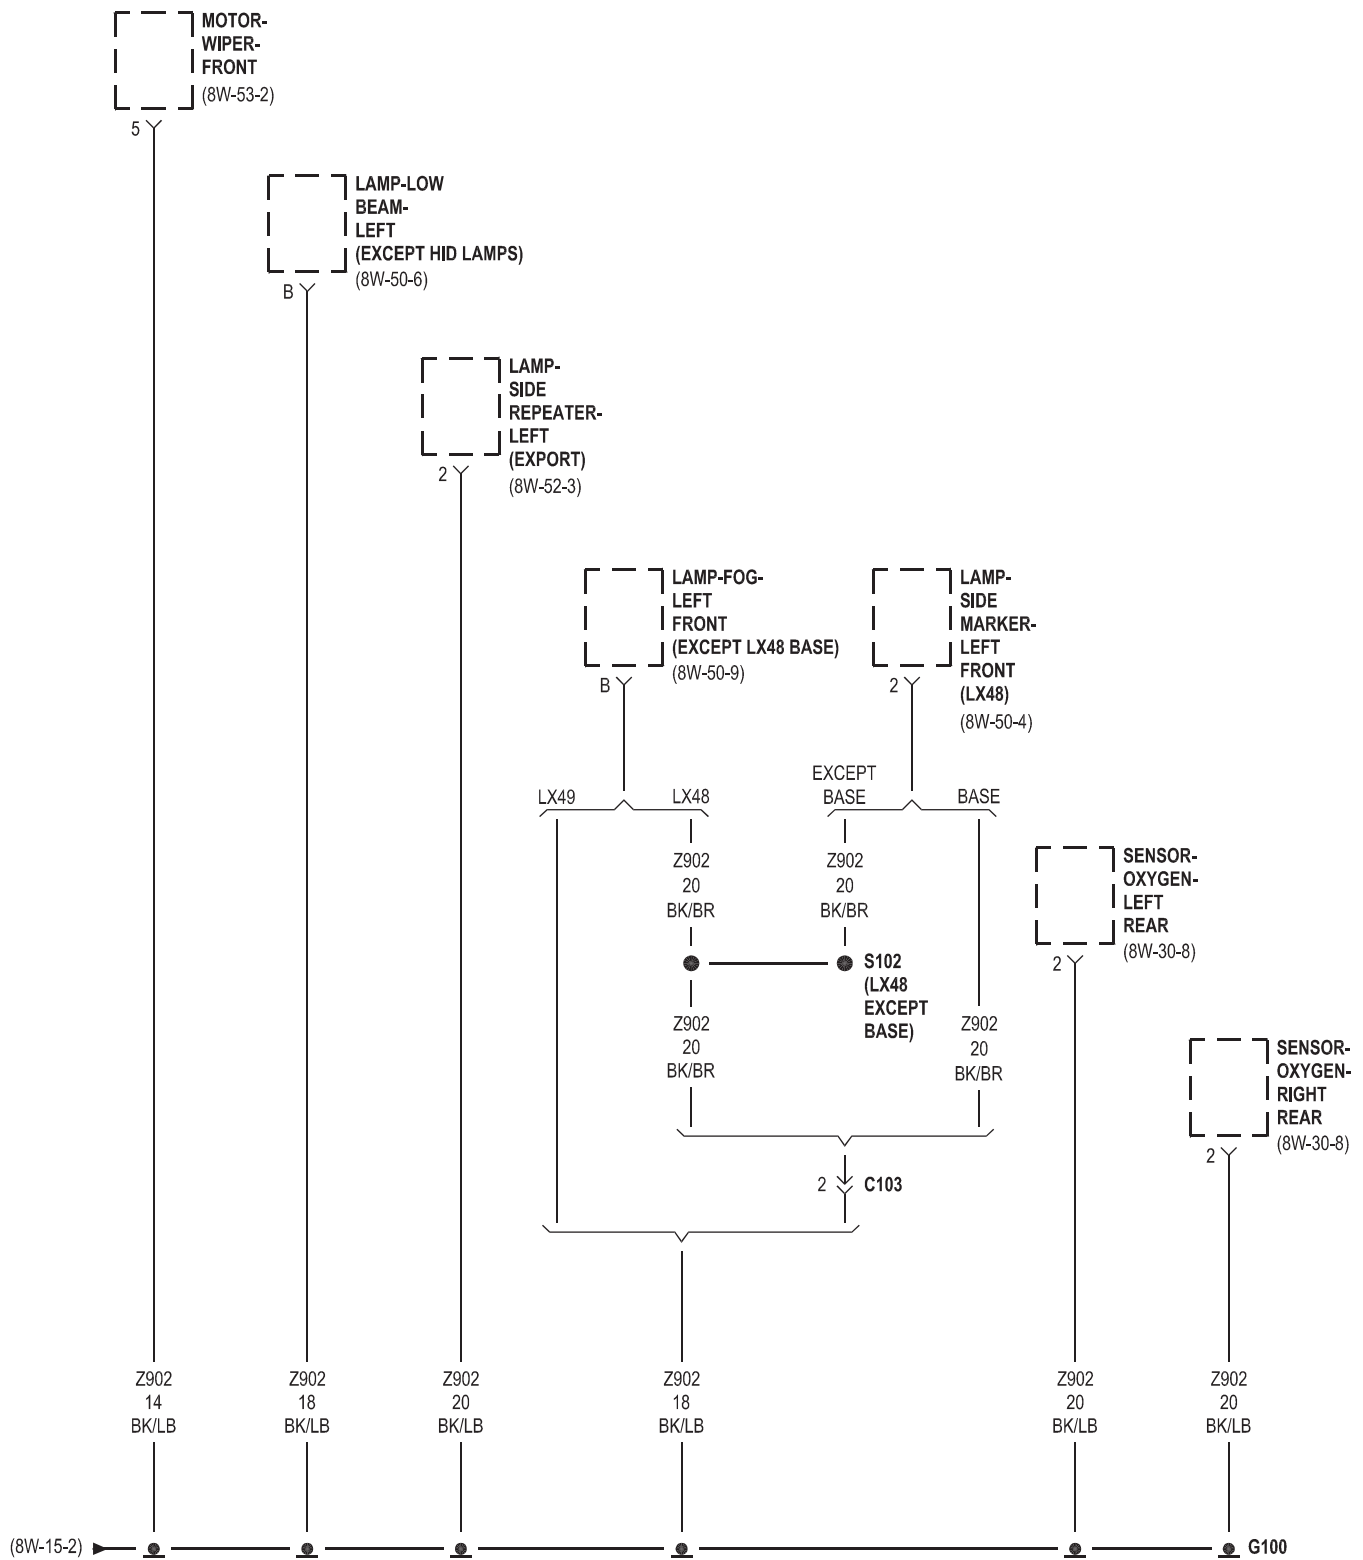

<b>Component</b>	<b>Page</b>	<b>Component</b>	<b>Page</b>
Amplifier-Radio	8W-15-15	Lamp-Turn-Left Rear	8W-15-26
Assembly-Exhaust Gas Recirculation Valve	8W-15-7, 8	Lamp-Turn-Right Rear	8W-15-26
Assembly-Natural Vacuum Leak Detection	8W-15-21	Lamp-Vanity-Left	8W-15-13
Assembly-Shifter Lever	8W-15-19	Lamp-Vanity-Right	8W-15-13
Backlite-Electric Heated	8W-15-16, 22	Latch-Door-Decklid	8W-15-19
Battery	8W-15-26	Latch-Door-Left Front	8W-15-18
Cluster	8W-15-14	Latch-Door-Left Rear	8W-15-17
Clutch-A/C Compressor	8W-15-7, 8	Latch-Door-Liftgate	8W-15-22
Control-A/C-Heater	8W-15-11, 14	Latch-Door-Right Front	8W-15-20
Data Link Connector	8W-15-15	Latch-Door-Right Rear	8W-15-19
Diode-Zener	8W-15-21	Lighter-Cigar	8W-15-14
Fan-Radiator	8W-15-6	Mirror-Inside Rearview	8W-15-12
G100	8W-15-2, 3	Mirror-Outside Rearview-Driver	8W-15-18
G101	8W-15-4, 5	Mirror-Outside Rearview-Passenger	8W-15-20
G102	8W-15-6, 7, 8	Module-Antilock Brakes	8W-15-5
G103	8W-15-10	Module-Brake	8W-15-21
G104	8W-15-10	Module-Clock Analog	8W-15-11
G105	8W-15-10	Module-Door-Driver	8W-15-18
G106	8W-15-10	Module-Door-Passenger	8W-15-20
G107	8W-15-10	Module-Electronic Overhead	8W-15-13
G108	8W-15-10	Module-Front Blower Power	8W-15-14
G109	8W-15-10	Module-Front Control	8W-15-2
G200	8W-15-11, 12	Module-Fuel Pump	8W-15-16
G201	8W-15-14	Module-Hands Free	8W-15-11
G202	8W-15-14, 15	Module-Headlamp Leveling	8W-15-5
G300	8W-15-16, 17, 18	Module-Heated Seats	8W-15-19
G301	8W-15-19, 20	Module-Integrated Power	8W-15-4, 6
G302	8W-15-21, 22, 23, 24, 25, 26	Module-Memory Seat	8W-15-16
G303	8W-15-26	Module-Occupant Classification	8W-15-19
Generator	8W-15-7, 8	Module-Occupant Restraint Controller	8W-15-12
Heater-Seat Back-Left	8W-15-17	Module-Park Assist	8W-15-21
Heater-Seat Back-Right	8W-15-20	Module-Powertrain Control	8W-15-6, 7
Heater-Seat Cushion-Left	8W-15-17	Module-Sentry Key Remote Entry	8W-15-14
Heater-Seat Cushion-Right	8W-15-20	Module-Steering Control	8W-15-14
Lamp-Back-Up-Left	8W-15-23, 26	Module-Transmission Control	8W-15-16
Lamp-Back-Up-Right	8W-15-24, 26	Motor-Headlamp Washer	8W-15-6
Lamp-Cargo	8W-15-22	Motor-Wiper-Front	8W-15-3
Lamp-Center High Mounted Stop	8W-15-19, 20	Motor-Wiper-Rear	8W-15-22
Lamp-Courtesy-Left Front Door	8W-15-18	Motor/Module-Sunroof	8W-15-13
Lamp-Courtesy-Left Rear	8W-15-13	Power Outlet-Console	8W-15-16
Lamp-Courtesy-Right Front Door	8W-15-20	Power Outlet-Rear	8W-15-22
Lamp-Courtesy-Right Rear	8W-15-13	Radio	8W-15-12
Lamp-Fog-Left Front	8W-15-3	Receiver-Satellite	8W-15-12
Lamp-Fog-Left Rear	8W-15-23	Relay-High Intensity Discharge Lamp	8W-15-6
Lamp-Fog-Right Front	8W-15-5	Relay-Transmission	8W-15-21
Lamp-Fog-Right Rear	8W-15-24	Relay-Wiper-Rear	8W-15-21
Lamp-Glove Box	8W-15-11	Sensor-Brake Fluid Level	8W-15-2
Lamp-High Beam-Left	8W-15-2	Sensor-Headlamp Level-Left	8W-15-5
Lamp-High Beam-Right	8W-15-4	Sensor-Headlamp Level-Right	8W-15-22
Lamp-High Intensity Discharge-Left	8W-15-2	Sensor-Oxygen-Left Front	8W-15-10
Lamp-High Intensity Discharge-Right	8W-15-4	Sensor-Oxygen-Left Rear	8W-15-3
Lamp-License	8W-15-25, 26	Sensor-Oxygen-Right Front	8W-15-10
Lamp-License-Left	8W-15-25	Sensor-Oxygen-Right Rear	8W-15-3
Lamp-License-Right	8W-15-25	Sensor-Rain	8W-15-12
Lamp-Low Beam-Left	8W-15-3	Sensor-Washer Fluid Level-Front	8W-15-4
Lamp-Low Beam-Right	8W-15-4	Solenoid-Manifold Tuning Valve	8W-15-7
Lamp-Park/Turn-Left Front	8W-15-2	Solenoid-Multi Displacement System Cyl 1	8W-15-9
Lamp-Park/Turn-Right Front	8W-15-5	Solenoid-Multi Displacement System Cyl 4	8W-15-9
Lamp-Prndl	8W-15-16	Solenoid-Multi Displacement System Cyl 6	8W-15-9
Lamp-Reading-Front	8W-15-13	Solenoid-Multi Displacement System Cyl 7	8W-15-9
Lamp-Side Marker-Left Front	8W-15-3	Switch-Adjustable Pedals	8W-15-17
Lamp-Side Marker-Left Rear	8W-15-23	Switch-Bank	8W-15-11
Lamp-Side Marker-Right Front	8W-15-5	Switch-Decklid Release	8W-15-15
Lamp-Side Marker-Right Rear	8W-15-24	Switch-Headlamp	8W-15-14
Lamp-Side Repeater-Left	8W-15-3	Switch-Heated Seat-Left	8W-15-11
Lamp-Side Repeater-Right	8W-15-6	Switch-Heated Seat-Right	8W-15-11
Lamp-Tail Park-Left	8W-15-23	Switch-Liftgate Release	8W-15-22
Lamp-Tail Park-Right	8W-15-24	Switch-Mirror	8W-15-18
Lamp-Tail Stop/Park-Left	8W-15-23	Switch-Seat Belt-Driver	8W-15-17
Lamp-Tail Stop/Park-Right	8W-15-24	Switch-Seat-Driver	8W-15-17
Lamp-Tail Stop/Turn-Left	8W-15-23	Switch-Seat-Passenger	8W-15-20
Lamp-Tail Stop/Turn-Right	8W-15-24	Switch-Security Hood	8W-15-6
Lamp-Tail Turn-Left	8W-15-23	Switch-Stop Lamp	8W-15-16
Lamp-Tail Turn-Right	8W-15-24	Switch-Window/Door Lock-Driver	8W-15-18
Lamp-Tail/Stop-Left	8W-15-26	Switch-Window/Door Lock-Driver Express	8W-15-18
Lamp-Tail/Stop-Right	8W-15-26

## 8W-91 CONNECTOR/GROUND/SPLICE LOCATION

## TABLE OF CONTENTS

page

**CONNECTOR/GROUND/SPLICE LOCATION**

DESCRIPTION ..... 1

**CONNECTOR/GROUND/SPLICE LOCATION****DESCRIPTION**

This section provides illustrations identifying connector, ground and splice locations in the vehicle. Connector, ground and splice indexes are provided. Use the wiring diagrams in each section for connector, ground and splice identification. Refer to the appropriate index for the proper figure number. For items that are not shown in this section N/S is placed in the Fig. column.

**CONNECTORS**

CONNECTOR NAME/ NUMBER	COLOR	LOCATION	FIG.
Actuator-Blend Door-Left	BK	Left Side of HVAC Unit	26
Actuator-Blend Door-Right (ATC)	BK	Center of HVAC Unit	24
Actuator-Mode Door	BK	Left Side of HVAC Unit	26
Actuator-Recirculation Door	BK	Right Side of HVAC Unit	25
Airbag-Driver Squib 1	BR/YL	At Steering Wheel	29
Airbag-Driver Squib 2	BK/YL	At Steering Wheel	29
Airbag-Passenger Squib	YL	Right Instrument Panel	35
Airbag-Side Curtain-Left	YL	Body Behind Left Rear Seat	46, 47
Airbag-Side Curtain-Right	YL	Body Behind Right Rear Seat	48, 56
Amplifier-Antenna-Backlite C1	BK	Upper Right Backlite	48, 55, 60
Amplifier-Antenna-Backlite C2			N/S

## POWER DISTRIBUTION

### DESCRIPTION

The power distribution system for this vehicle consists of the following components:

- Cigar Lighter Outlet
- Front Control Module (FCM) - located underhood
- Integrated Power Module (IPM) - located underhood
- Power Distribution Center (PDC) - located in trunk
- Power Outlets

Refer to Wiring Diagrams for complete circuit schematics.

The power distribution system also incorporates various types of circuit control and protection features, including:

- Automatic resetting circuit breakers
- Blade-type fuses
- Cartridge fuses
- Relays

### OPERATION

The power distribution system for this vehicle is designed to provide safe, reliable, and centralized distribution points for the electrical current required to operate all of the many standard and optional factory-installed electrical and electronic powertrain, chassis, safety, security, comfort and convenience systems. At the same time, the power distribution system was designed to provide ready access to these electrical distribution points for the technician to use when conducting diagnosis and repair of inoperative circuits. The power distribution system can also prove useful for the sourcing of additional electrical circuits that may be required to provide the electrical current needed to operate many accessories that the vehicle owner may choose to have installed.

## INTEGRATED POWER MODULE

### DESCRIPTION

The majority of electrical system fuses and relays are housed in the two Power Distribution Centers (PDC). One is located in the engine compartment, combined with the Front Control Module (FCM) to form the Integrated Power Module (IPM). The other is next to the battery at the rear of the vehicle.

## REMOVAL

**Note:** A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).

1. Disconnect and isolate the battery negative cable (2).

2. Open the battery cable nut cover to expose nut.
3. Remove battery cable nut and battery cable from the Integrated Power Module (IPM).

4. Disengage the outboard retaining clip, and rotate the IPM to access wire harness connectors.
5. Disconnect wire harness connectors from IPM.
6. Disengage the two inboard retaining clips.

7. Remove IPM from vehicle.

## INSTALLATION

**Note:** A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).

1. Position Integrated Power Module (IPM) to vehicle. Engage the three retaining clips.

2. Disengage the outboard retaining clip and rotate the IPM to access wire harness connectors.
3. Connect electrical harness connectors to IPM.

4. Connect battery cable to IPM.
5. Install and tighten retaining nut.
6. Close the battery cable nut cover.

7. Connect battery negative cable (2).

## POWER DISTRIBUTION CENTER

### DESCRIPTION

The majority of electrical system fuses and relays are housed in the two Power Distribution Centers (PDC). One is located in the engine compartment, combined with the Front Control Module (FCM) to form the Integrated Power Module (IPM). The other is next to the battery at the rear of the vehicle. The PDC located next to the battery is replaced only as part of the body wiring harness.

## POWER OUTLET

### DESCRIPTION

Sedans are equipped with two 12-volt electrical outlets. Wagons are equipped with three 12-volt electrical outlets. The outlets are located in the following locations:

- Cargo area right quarter trim panel (wagons only).
- Inside the center console.
- Next to the ash receiver in the center stack.

The outlets in the console and quarter trim panel have power at all times, and include tethered covers. The outlet in the ash receiver tray is shipped with power available only when the ignition is in the ON position. This outlet can be changed to provide power at all times by moving a fuse in the fuse block.

### REMOVAL

**Note: A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).**

1. Disconnect and isolate the battery negative cable.
2. Pull the cigar lighter knob and element out of the cigar lighter receptacle base, or unsnap the protective cap from the power outlet.
3. Look inside the cigar lighter or power outlet and note the position of the rectangular retaining bosses of the mount that secures the receptacle base.
4. Insert a pair of external snap ring pliers into the cigar lighter or power outlet receptacle base and engage the tips of the pliers with the retaining bosses of the mount.
5. Squeeze the pliers to disengage the mount retaining bosses from the receptacle base and, using a gentle rocking motion, pull the pliers and the receptacle base out of the mount.
6. Pull the receptacle base away far enough to access the wire harness connector.
7. Disconnect the wire harness connector from the cigar lighter or power outlet.
8. Remove the cigar lighter or power outlet.

### INSTALLATION

**Note: A battery reconnect procedure must be performed anytime the battery has been disconnected. (Refer to 8 - ELECTRICAL/BATTERY SYSTEM - STANDARD PROCEDURE).**

1. Connect the wire harness connector to the cigar lighter or power outlet receptacle base connector receptacle.
2. Install the cigar lighter or power outlet mount into position.
3. Align the splines on the outside of the cigar lighter or power outlet receptacle base connector receptacle with the grooves on the inside of the mount.
4. Press firmly on the cigar lighter or power outlet receptacle base until the retaining bosses of the mount are fully engaged in their receptacles.
5. Install the cigar lighter knob and element into the cigar lighter receptacle base, or the protective cap into the power outlet receptacle base.
6. Connect the battery negative cable.

## **ENGINE ELECTRICAL DIAGNOSTICS**

### **DIAGNOSIS AND TESTING**

## PRE-DIAGNOSTIC TROUBLESHOOTING PROCEDURE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

### Diagnostic Test

#### 1. NO RESPONSE

Make sure the scan tool will communicate with the appropriate modules.

**Are you currently experiencing a NO RESPONSE condition?**

**Yes** >> The NO RESPONSE condition must be properly diagnosed before continuing.  
Refer to the appropriate BUS Communication test in Section 8 ELECTRONIC CONTROL MODULES - ELECTRICAL DIAGNOSTICS.

**No** >> Go To 2

---

#### 2. NO START

**Is the customer complaint a NO START condition?**

**Yes** >> Check the vehicle for any NO START related PCM DTC(s) or Vehicle Theft Security related DTC(s).  
If no Theft related DTC(s) are present, refer to the Non DTC Diagnostic Procedures that relate to Fuel and Starting.

**No** >> Go To 3

---

#### 3. VEHICLE HISTORY AND TSB(s)

Continue by reading PCM DTC(s) and record the related Freeze Frame data if any DTC(s) are present.

Whether or not any DTC(s) are present you will want to check the following items which may assist in repairing the customers complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any TSB(s) related to the customer's complaint or DTC(s).

If a TSB applies, follow the instructions per the TSB.

**Choose the following scenario that best applies.**

**The TSB repaired the customers complaint.**

Testing complete.

**A DTC is present, no TSB applies, or the TSB didn't repair the customers complaint.**

Go To 4

**No DTC(s) are present.**

Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

---

**PRE-DIAGNOSTIC TROUBLESHOOTING PROCEDURE (CONTINUED)****4. WIRE HARNESS INSPECTION**

Clear the DTC(s).

Attempt to duplicate the customer complaint.

Whether the customer complaint can be duplicated or not, make a quick wire harness inspection related to the DTC(s) that were previously cleared.

Check the Powertrain Control Module connectors, the suspected component connection, in-line connectors, wire harness splices, PCM power and ground circuits, and any related fuses.

If the DTC(s) are fuel or air related, check the fuel level, quality and the air duct system.

**Were any repairs made that fixed the customer's complaint?**

**Yes** >> Testing complete.

**No** >> Refer to the diagnostic test procedure related to the DTC.

---

## INTERMITTENT CONDITION

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

POSSIBLE CAUSES
INTERMITTENT CONDITION

### Diagnostic Test

#### 1. INTERMITTENT CONDITION

**Note:** The conditions that set the DTC are not present at this time. The following list may help in identifying the intermittent condition.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Refer to any Technical Service Bulletins (TSBs) that may apply.

Review the scan tool Freeze Frame information. If possible, try to duplicate the conditions under which the DTC set. With the engine running at normal operating temperature, monitor the scan tool parameters related to the DTC while wiggling the wire harness. Look for parameter values to change and/or a DTC to set.

Turn the ignition off.

Visually inspect the related wire harness. Disconnect all the related harness connectors. Look for any chafed, pierced, pinched, partially broken wires and broken, bent, pushed out, or corroded terminals.

Perform a voltage drop test on the related circuits between the suspected faulty component and the PCM.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Inspect and clean all PCM, engine, and chassis grounds that are related to the most current DTC.

If numerous trouble codes were set, use a wire schematic and look for any common ground or supply circuits.

For any Relay DTCs, actuate the Relay with the scan tool and wiggle the related wire harness to try to interrupt the actuation.

For intermittent Evaporative Emission trouble codes perform a visual and physical inspection of the related parts including hoses and the Fuel Filler cap.

For intermittent Misfire DTC's check for restrictions in the Intake and Exhaust system, proper installation of Sensors, vacuum leaks, and binding components that are run by the accessory drive belt.

Use the scan tool to perform a System Test if one applies to the failing component.

A co-pilot, data recorder, and/or lab scope should be used to help diagnose intermittent conditions.

#### Were any problems found during the above inspections?

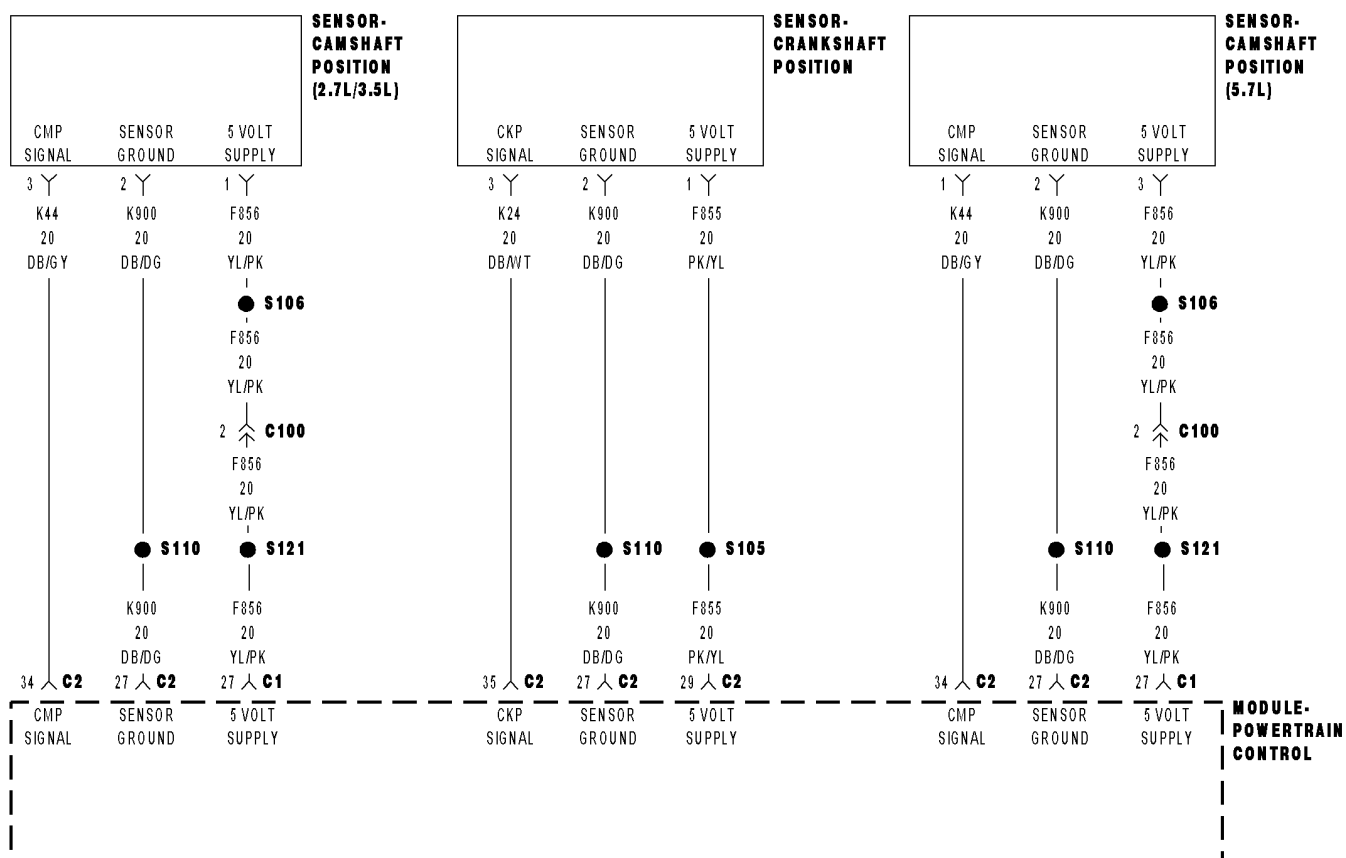

**Yes** >> Perform the necessary repairs.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P0016-CRANKSHAFT / CAMSHAFT TIMING MISALIGNMENT

**P0016–CRANKSHAFT / CAMSHAFT TIMING MISALIGNMENT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine cranking and Engine running

- **Set Condition:**

Powertrain Control Module detects an error when the camshaft position is out of phase with the crankshaft position. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
ERRATIC CAM POSITION SENSOR SIGNAL
CAMSHAFT POSITION SENSOR TONE WHEEL/PULSE RING
ERRATIC CRANKSHAFT POSITION SENSOR SIGNAL
CRANKSHAFT POSITION SENSOR TONE WHEEL/PULSE RING
CAMSHAFT POSITION SENSOR
CRANKSHAFT POSITION SENSOR

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

With the scan tool clear the DTC(s).

Start the engine and run until operating temp is reached. (Closed Loop)

If the DTC does not reset it may be necessary to test drive the vehicle.

#### Does the P0016 return?

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0016–CRANKSHAFT / CAMSHAFT TIMING MISALIGNMENT (CONTINUED)****2. CHECKING THE CMP SIGNAL WITH A LAB SCOPE**

With a lab scope, backprobe the (K44) CMP Signal circuit at the CMP Sensor harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 3

**No** >> Go To 6

**3. CMP WIRE HARNESS INSPECTION**

Turn the ignition off.

Visually inspect the related wire harness. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to their proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. TONE WHEEL/PULSE RING INSPECTION**

Remove the Camshaft Position Sensor.

Inspect the Tone Wheel/Pulse Ring for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Pulse Ring as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0016–CRANKSHAFT / CAMSHAFT TIMING MISALIGNMENT (CONTINUED)****5. CAMSHAFT POSITION SENSOR**

If there are no possible causes remaining, view repair.

**Repair**

Replace the Camshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. ERRATIC CMP SIGNAL**

Turn the ignition off.

Remove the lab scope probe.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

With scan tool, erase DTCs.

Start the engine.

Gently tap on and wiggle the Cam Position Sensor.

Ignition on, engine not running.

Inspect the Sensor connector and harness connector, and inspect the PCM connector and harness connector for loose, bent, corroded, or pushed out pins/terminals.

Inspect the related wire harness and the splices in the CMP circuit.

**Does the P0016 return?**

**Yes** >> Repair the wiring/connector concerns as needed or replace the Camshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. CHECKING THE CKP SIGNAL WITH A LAB SCOPE**

Turn the ignition off.

With a lab scope, backprobe the (K24) CKP Signal circuit at the CKP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 8

**No** >> Go To 10

**P0016–CRANKSHAFT / CAMSHAFT TIMING MISALIGNMENT (CONTINUED)****8. CKP WIRE HARNESS INSPECTION**

Turn the ignition off.

Visually inspect the related wire harness. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to their proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 9

---

**9. TONE WHEEL/FLEX PLATE INSPECTION**

Remove the Crankshaft Position Sensor.

Inspect the Tone Wheel/Flex Plate slots for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Flex Plate as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace the Crankshaft Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**10. ERRATIC CKP SIGNAL**

**Note:** The conditions that set this DTC are not present at this time. The following test may help in identifying the intermittent condition.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Start the engine.

Gently tap on and wiggle the Crank Position Sensor.

Turn the ignition off.

Inspect the Sensor connector and harness connector, and inspect the PCM connector and harness connector for loose, bent, corroded, or pushed out pins/terminals.

Inspect the related wire harness and the splices in the CKP circuits.

**Were any problems found?**

**Yes** >> Repair the wiring/connector concerns as needed or replace the Crankshaft Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

---

**P0031-O2 SENSOR 1/1 HEATER CIRCUIT LOW**

**P0031-O2 SENSOR 1/1 HEATER CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is powered.

- **Set Condition:**

Desired state does not match Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K99) O2 SENSOR 1/1 HEATER CONTROL CIRCUIT SHORTED TO GROUND O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 1/1 O2 Sensor voltage for at least 2 minutes.

**Does the O2 Sensor voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. O2 HEATER ELEMENT

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 1/1 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the Heater Control terminal and the Heater ground terminal at the component.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0031-O2 SENSOR 1/1 HEATER CIRCUIT LOW (CONTINUED)****3. O2 SENSOR**

Ignition on, engine not running.

With a scan tool, actuate the O2 1/1 Heater Test with the O2 Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K99) O2 1/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K99) O2 1/1 HEATER CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K99) O2 1/1 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K99) O2 1/1 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0032-O2 SENSOR 1/1 HEATER CIRCUIT HIGH

P0032-O2 SENSOR 1/1 HEATER CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is off.
- **Set Condition:**  
Desired state does not equal Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN (Z904) O2 1/1 HEATER GROUND CIRCUIT OPEN (K99) O2 1/1 HEATER CONTROL SHORTED TO BATTERY VOLTAGE O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0032-O2 SENSOR 1/1 HEATER CIRCUIT HIGH (CONTINUED)****2. O2 HEATER ELEMENT**

Turn the ignition off.

**Note: Allow the O2 Sensor to cool down to room temperature.**

Disconnect the 1/1 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element between the O2 Heater Control terminal and the O2 Heater ground terminal at the component.

**Note: O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.**

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. (K99) O2 1/1 HEATER CONTROL CIRCUIT**

Ignition on, engine not running.

With a scan tool, actuate the O2 1/1 Heater Test with the Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K99) O2 1/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Go To 4

**No** >> Go To 5

**P0032-O2 SENSOR 1/1 HEATER CIRCUIT HIGH (CONTINUED)****4. (Z904) O2 HEATER GROUND CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance between an engine ground and the (Z904) O2 1/1 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

- Yes** >> Replace the O2 Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Repair the open in the (Z904) O2 1/1 Heater ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K99) O2 1/1 HEATER CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K99) O2 1/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the voltmeter indicate any voltage present?**

- Yes** >> Repair the short to battery voltage in the (K99) O2 1/1 Heater Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 6

**P0032-O2 SENSOR 1/1 HEATER CIRCUIT HIGH (CONTINUED)****6. (K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K99) O2 1/1 Heater Control circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K99) O2 1/1 Heater Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0037-O2 SENSOR 1/2 HEATER CIRCUIT LOW**

**P0037-O2 SENSOR 1/2 HEATER CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is on.

- **Set Condition:**

Desired state does not match Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K299) O2 1/2 HEATER CONTROL CIRCUIT SHORTED TO GROUND O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 1/2 Heater Test.

With the scan tool, monitor 1/2 O2 Sensor voltage for at least 2 minutes.

**Does the O2 Sensor voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. O2 HEATER ELEMENT

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 1/2 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the O2 Heater Control terminal and the O2 Heater ground terminal at the component.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0051-O2 SENSOR 2/1 HEATER CIRCUIT LOW**

**P0051-O2 SENSOR 2/1 HEATER CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is on.
- **Set Condition:**  
Desired state does not match Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K199) O2 2/1 HEATER CONTROL CIRCUIT SHORTED TO GROUND O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. O2 SENSOR HEATER OPERATION**

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With a scan tool, monitor 2/1 O2 Sensor voltage for at least 2 minutes.

**Does the O2 Sensor voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**2. O2 HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 2/1 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the Heater Control terminal and the Heater ground terminal at the component.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0051-O2 SENSOR 2/1 HEATER CIRCUIT LOW (CONTINUED)****3. O2 SENSOR**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test with the O2 Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K199) O2 2/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K199) O2 2/1 HEATER CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K199) O2 2/1 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K199) O2 2/1 Sensor Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P0052-O2 SENSOR 2/1 HEATER CIRCUIT HIGH

**P0052-O2 SENSOR 2/1 HEATER CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is off.
- **Set Condition:**  
Desired state does not equal Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN (Z904) O2 2/1 HEATER GROUND CIRCUIT OPEN (K199) O2 2/1 HEATER CONTROL SHORTED TO BATTERY VOLTAGE O2 SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0052-O2 SENSOR 2/1 HEATER CIRCUIT HIGH (CONTINUED)****2. O2 HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 2/1 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the O2 Heater Control terminal and the Heater ground terminal at the component connector.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (K199) O2 2/1 HEATER CONTROL CIRCUIT**

Ignition on, engine not running.

With the scan tool, actuate the O2 Heater Test with the Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K199) O2 2/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Go To 4

**No** >> Go To 5

**4. (Z904) O2 2/1 HEATER GROUND CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance between an engine ground and the (Z904) O2 2/1 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Repair the open in the (Z904) O2 2/1 Heater ground circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0052-O2 SENSOR 2/1 HEATER CIRCUIT HIGH (CONTINUED)****5. (K199) O2 2/1 HEATER CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K199) O2 2/1 Heater Control circuit in the O2 Sensor harness connector.

**Does the voltmeter indicate any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K199) O2 2/1 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K199) O2 2/1 Heater Control circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K199) O2 2/1 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0052-02 SENSOR 2/1 HEATER CIRCUIT HIGH (CONTINUED)****7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0057-O2 SENSOR 2/2 HEATER CIRCUIT LOW**

**P0057-O2 SENSOR 2/2 HEATER CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is on.

- **Set Condition:**

Desired state does not match Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT SHORTED TO GROUND
O2 SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 2/2 O2 Sensor voltage for at least 2 minutes.

**Does the O2 Sensor voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. O2 HEATER ELEMENT

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 2/2 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the O2 Heater Control terminal and the O2 Heater ground terminal in the component connector.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0057-O2 SENSOR 2/2 HEATER CIRCUIT LOW (CONTINUED)****3. O2 SENSOR**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test with the O2 Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K399) O2 2/2 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K399) O2 2/2 HEATER CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K399) O2 2/2 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K399) O2 2/2 Sensor Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0058-O2 SENSOR 2/2 HEATER CIRCUIT HIGH

P0058-O2 SENSOR 2/2 HEATER CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Battery voltage above 10.6 volts, ASD is powered up, and O2 heater is off.
- **Set Condition:**  
Desired state does not equal Actual state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN (Z902) O2 2/2 HEATER GROUND CIRCUIT OPEN (K399) O2 2/2 HEATER CONTROL SHORTED TO BATTERY VOLTAGE O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0058-O2 SENSOR 2/2 HEATER CIRCUIT HIGH (CONTINUED)****2. O2 HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 Sensor to cool down to room temperature.

Disconnect the 2/2 O2 Sensor harness connector.

Measure the resistance across the O2 Sensor Heater element, between the O2 Heater Control terminal and the O2 Heater ground terminal in the component connector.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the O2 Sensor Heater Element resistance between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (K399) O2 2/2 HEATER CONTROL CIRCUIT**

Ignition on, engine not running.

With a scan tool, actuate the O2 2/2 Heater Test with the Sensor harness connector still disconnected.

Using a 12-volt test light connected to ground, probe the (K399) O2 2/2 Heater Control circuit in the O2 Sensor harness connector.

**Does the test light illuminate brightly and flash on and off during the actuation?**

**Yes** >> Go To 4

**No** >> Go To 5

**4. (Z902) O2 HEATER GROUND CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance between an engine ground and the (Z902) O2 2/2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Repair the open in the (Z902) O2 2/2 Heater ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0058-O2 SENSOR 2/2 HEATER CIRCUIT HIGH (CONTINUED)****5. (K399) O2 2/2 HEATER CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K399) O2 Heater 2/2 Control circuit in the O2 Sensor harness connector.

**Does the voltmeter indicate any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K399) O2 2/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K399) O2 2/2 Heater Control circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K399) O2 2/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0058-02 SENSOR 2/2 HEATER CIRCUIT HIGH (CONTINUED)****7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE**

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine off time is greater than 480 minutes. Ambient temperature is greater than 4 deg C (38 deg F).

- **Set Condition:**

After a calibrated amount of cool down time, the PCM compares the ECT Sensor, IAT Sensor and the Ambient Air Temperature Sensor values. If the Ambient Air Temperature Sensor value is not within a calibrated temperature amount of the other two temperature sensors an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(G31) AAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(G31) AAT SIGNAL CIRCUIT OPEN
(G931) SENSOR GROUND CIRCUIT OPEN
(G31) AAT SIGNAL CIRCUIT SHORTED TO GROUND
(G31) AAT SIGNAL CIRCUIT SHORTED TO THE (G931) SENSOR GROUND CIRCUIT
AMBIENT AIR TEMPERATURE SENSOR
FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Diagnose any CAN - C Communication DTCs before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE (CONTINUED)****2. (G31) AAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the C2 FCM harness connector.

Disconnect the AAT Sensor harness connector.

**Note: Visually inspect both the component and the FCM connectors. Look for damaged, partially broken wires, and backed out or corroded terminals.**

Ignition on, engine not running.

Measure the voltage on the (G31) AAT Signal circuit in the AAT Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to voltage in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 3

**3. AAT SENSOR VOLTAGE ABOVE 4.6 VOLTS**

Turn the ignition off.

Connect the C2 FCM harness connectors.

Ignition on, engine not running.

With a scan tool, read the AAT voltage.

**Is the voltage above 4.6 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

**4. AAT SENSOR**

Connect a jumper wire between the (G31) AAT Signal circuit and the (G931) Sensor ground circuit in the AAT Sensor harness connector.

With a scan tool, read the AAT voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the AAT Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 5

**Note: Remove the jumper wire before continuing.**

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE (CONTINUED)****5. (G31) AAT SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the C2 FCM harness connector.

Measure the resistance of the (G31) AAT Signal circuit from the AAT Sensor harness connector to the C2 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**6. (G931) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (G931) Sensor ground circuit from the AAT Sensor harness connector to the C2 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (G931) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE (CONTINUED)****7. (G31) AAT SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 FCM harness connector.

Measure the resistance between ground and the (G31) AAT Signal circuit in the AAT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 8

**8. (G31) AAT SIGNAL SHORTED TO THE (G931) SENSOR GROUND CIRCUIT**

Measure the resistance between the (G31) AAT Signal circuit and the (G931) Sensor ground circuit in the AAT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (G931) Sensor ground circuit and the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 9

**P0071-AMBIENT AIR TEMPERATURE SENSOR PERFORMANCE (CONTINUED)****9. FRONT CONTROL MODULE**

**Note:** Before continuing, check the FCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform BODY VERIFICATION TEST VER - 1.
- No** >> Replace the Front Control Module per Service Information.  
Perform BODY VERIFICATION TEST VER - 1.
-

**P0072-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT LOW**

**P0072-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
The ignition key on.
- **Set Condition:**  
Ambient Temperature Sensor is less than 0.078 of a volt at the PCM for 2.8 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(G31) AAT SIGNAL CIRCUIT SHORTED TO GROUND (G31) AAT SIGNAL CIRCUIT SHORTED TO THE (G931) SENSOR GROUND CIRCUIT AMBIENT AIR TEMPERATURE SENSOR FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. AAT SENSOR VOLTAGE BELOW 0.078 OF A VOLT**

**Note:** Diagnose any CAN - C Communication DTCs before continuing.

Ignition on, engine not running.

With a scan tool, read the Ambient Air Temperature Sensor voltage.

**Is the voltage below 0.078 of a volt?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**2. CHECKING AAT SENSOR**

Turn the ignition off.

Disconnect the Ambient Air Temperature Sensor harness connector.

Ignition on, engine not running.

With a scan tool, read the AAT Sensor voltage.

**Is the voltage above 4.6 volts?**

- Yes** >> Replace the Ambient Temperature Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Go To 3

**P0072-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****3. (G31) AAT SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 FCM harness connectors.

Measure the resistance between ground and the (G31) AAT Signal circuit in the AAT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 4

**4. (G31) AAT SIGNAL CIRCUIT SHORTED TO THE (G931) SENSOR GROUND CIRCUIT**

Measure the resistance between the (G931) Sensor ground circuit and the (G31) AAT Signal circuit in the AAT Sensor harness connector.

**Is the resistance below 5.0ohms?**

**Yes** >> Repair the short between the (G931) Sensor ground circuit and the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 5

**P0072-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****5. FRONT CONTROL MODULE**

**Note:** Before continuing, check the FCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform BODY VERIFICATION TEST VER - 1.

**No** >> Replace and program the Front Control Module per Service Information.

Perform BODY VERIFICATION TEST VER - 1.

---

**P0073—AMBIENT AIR TEMPERATURE SENSOR CIRCUIT HIGH**

**P0073–AMBIENT AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. Battery voltage greater than 10 volts.

- **Set Condition:**

The Ambient Temperature Sensor voltage is greater than 4.98 volts at the PCM for 2.8 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(G31) AAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(G31) AAT SIGNAL CIRCUIT OPEN
(G931) SENSOR GROUND CIRCUIT OPEN
AMBIENT AIR TEMPERATURE SENSOR
FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. AAT SENSOR VOLTAGE ABOVE 4.98 VOLTS

Ignition on, engine not running.

With a scan tool, read the Ambient Air Temperature Sensor voltage.

**Is the voltage above 4.98 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0073-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****2. AAT SENSOR**

Turn the ignition off.

Disconnect the Ambient Air Temperature Sensor harness connector.

Connect a jumper wire between the (G31) AAT Signal circuit and the (G931) Sensor ground circuit in the AAT Sensor harness connector.

Ignition on, engine not running.

With a scan tool, read AAT Sensor voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the Ambient Air Temperature Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (G31) AAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Disconnect the C2 FCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (G31) AAT Signal circuit in the AAT Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 4

**P0073-AMBIENT AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****4. (G31) AAT SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (G31) AAT Signal circuit from the AAT Sensor harness connector to the C2 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (G31) AAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**5. (G931) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (G931) Sensor ground circuit from the AAT Sensor harness connector to the C2 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (G931) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0073–AMBIENT AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****6. FRONT CONTROL MODULE**

**Note:** Before continuing, check the FCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
            Perform BODY VERIFICATION TEST VER - 1.
- No**      >> Replace the Front Control Module per Service Information.  
            Perform BODY VERIFICATION TEST VER - 1.
-

**P0107-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine speed between 600 to 3500 RPM. Battery voltage greater than 10 volts.

- **Set Condition:**

The MAP sensor signal voltage is below 0.0782 of a volt for 1.7 seconds. One Trip Fault. Three good trips to turn off the MIL, (ETC light will flash.)

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT OPEN (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT MAP SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. MAP SENSOR VOLTAGE BELOW 0.0782 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the MAP Sensor voltage.

**Is the voltage below 0.0782 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0107-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

**3. MAP SENSOR**

With a scan tool, monitor the MAP Sensor voltage with the Sensor harness connector disconnected.

**Is the voltage above 4.5 volts?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K1) MAP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0107-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****5. (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**6. (F856) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F856) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0107-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****7. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

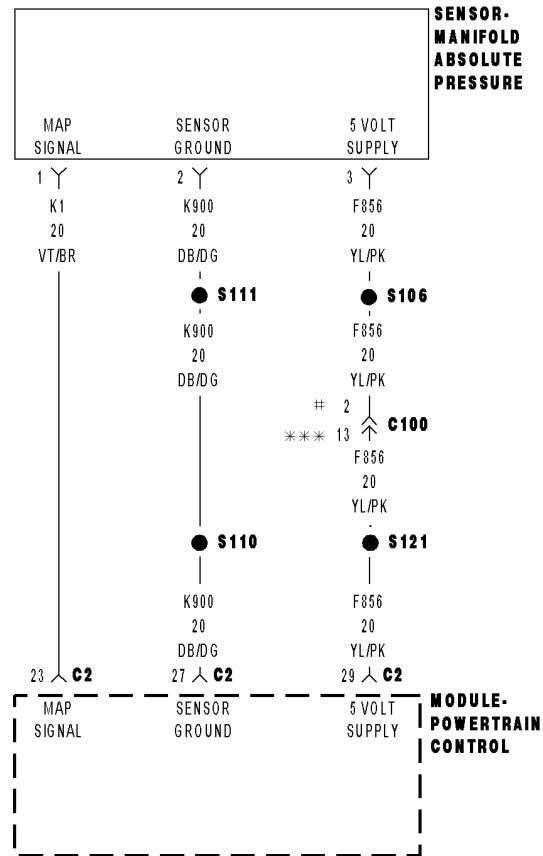

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0108-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT HIGH**

2.7L/3.5L  
\*\*\* 5.7L

**P0108-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine speed between 600 to 3500 RPM. Battery voltage greater than 10.37 volts.

- **Set Condition:**

The MAP sensor signal voltage is greater than 4.92 volts for 3.0 seconds. One trip fault. Three good trips to turn off the MIL. (ETC light will flash).

Possible Causes
(K1) MAP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K1) MAP SIGNAL CIRCUIT OPEN
(K1) MAP SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT
(K900) SENSOR GROUND CIRCUIT OPEN
MAP SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. MAP SENSOR VOLTAGE ABOVE 4.92 VOLTS

Start the engine.

With a scan tool, read the MAP Sensor voltage.

**Is the voltage above 4.92 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0108-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****2. MAP SENSOR**

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit in the Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (K1) MAP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0108-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)

### 4. (K1) MAP SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K1) MAP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K1) MAP Signal circuit and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (F856) 5-volt Supply circuit and the (K1) MAP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0108-MANIFOLD ABSOLUTE PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****6. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

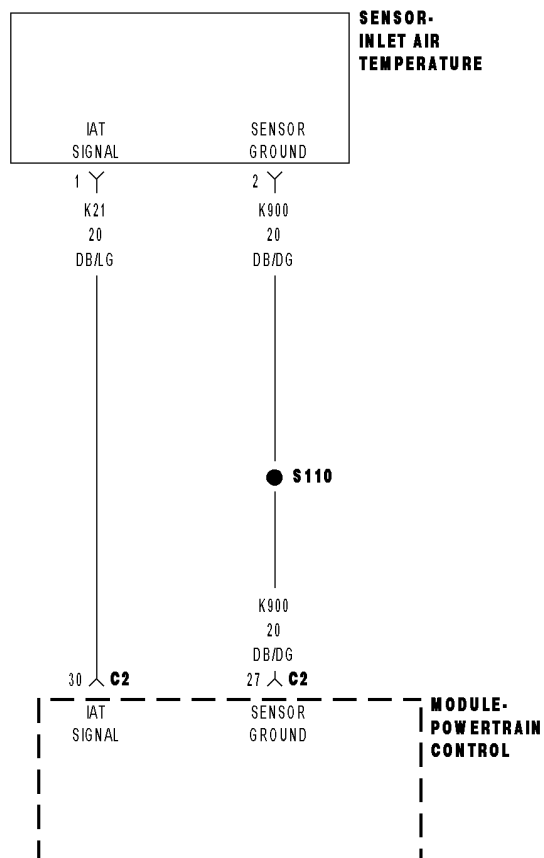

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY

**P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

The engine off time is greater than 480 minutes. Ambient Temperature if greater than 4 deg C (38 deg F).

- **Set Condition:**

After a calibrated amount of cool down time, the PCM compares the ECT Sensor, IAT Sensor and the Ambient Air Temperature Sensor values. If the IAT Sensor value is not within calibrated temperature amount of the other two temperature sensors an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K21) IAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K21) IAT SIGNAL CIRCUIT OPEN
(K900) SENSOR GROUND CIRCUIT OPEN
(K21) IAT SIGNAL CIRCUIT SHORTED TO GROUND
(K21) IAT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND
INTAKE AIR TEMPERATURE SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY (CONTINUED)****2. (K21) IAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the IAT Sensor harness connector.

**Note: Visually inspect both the component and the PCM connectors. Look for damaged, partially broken wires, and backed out or corroded terminals.**

Ignition on, engine not running.

Measure the voltage on the (K21) IAT Signal circuit in the IAT Sensor harness connector.

**Is voltage present?**

**Yes** >> Repair the short to battery voltage in the (K21) IAT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. IAT SENSOR VOLTAGE ABOVE 4.6 VOLTS**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, read the IAT voltage.

**Is the voltage above 4.6 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

**P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY (CONTINUED)****4. IAT SENSOR**

Connect a jumper wire between the (K21) IAT Signal circuit and the (K900) Sensor ground circuit in the IAT Sensor harness connector. With a scan tool, read the IAT voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the IAT Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. (K21) IAT SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K21) IAT Signal circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K21) IAT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY (CONTINUED)

### 6. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 7. (K21) IAT SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K21) IAT Signal circuit in the IAT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K21) IAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0111-INTAKE AIR TEMPERATURE SENSOR RATIONALITY (CONTINUED)****8. (K21) IAT SIGNAL SHORTED TO THE (K900) SENSOR GROUND**

Measure the resistance between the (K21) IAT Signal circuit and the (K900) Sensor ground circuit in the IAT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K21) IAT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

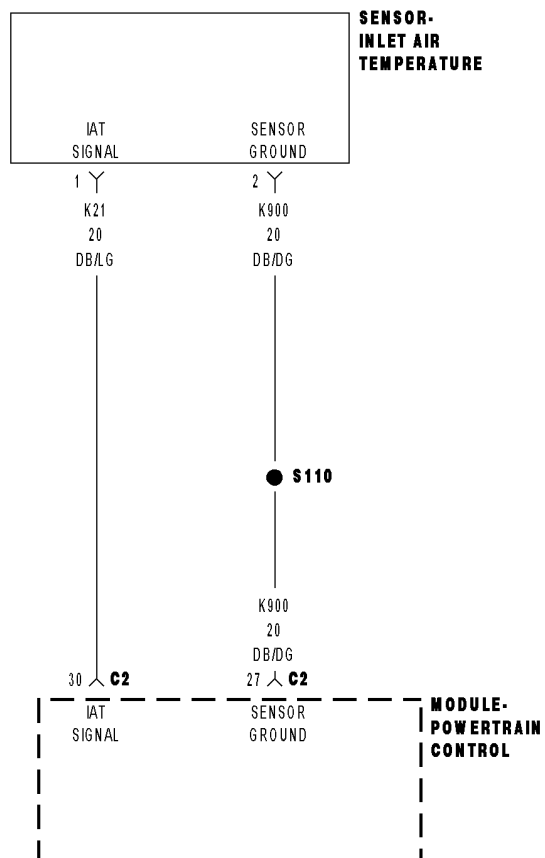

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0112-INTAKE AIR TEMPERATURE SENSOR CIRCUIT LOW

**P0112-INTAKE AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and battery voltage greater than 10.4 volts.

- **Set Condition:**

When the Inlet Air Temp Sensor Signal circuit voltage is less than .078 volt for more than 2.8 seconds. One trip failure. Three good trips to clear the MIL.

Possible Causes
(K21) IAT SENSOR SIGNAL SHORTED TO GROUND (K21) IAT SENSOR SIGNAL SHORTED TO (K900) SENSOR GROUND CIRCUIT INTAKE AIR TEMPERATURE SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. IAT SENSOR VOLTAGE BELOW 0.078 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the IAT voltage.

**Is the voltage below 0.078 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. IAT SENSOR

Turn the ignition off.

Disconnect the IAT Sensor harness connector.

Ignition on, engine not running.

With a scan tool, read IAT voltage.

**Is the voltage above 4.5 of a volts?**

**Yes** >> Replace the Intake Air Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0112-INTAKE AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****3. (K21) IAT SENSOR SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K21) IAT Sensor Signal circuit in the IAT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K21) IAT Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K21) IAT SENSOR SIGNAL SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (K21) IAT Sensor Signal circuit and the (K900) Sensor ground circuit in the IAT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground circuit and the (K21) IAT Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0112-INTAKE AIR TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0113-INTAKE AIR TEMPERATURE SENSOR CIRCUIT HIGH

P0113-INTAKE AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)

For the Engine System Schematic circuit diagram. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS)

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**  
The Intake Air Temperature (IAT) sensor circuit voltage at the PCM goes above 4.98 volts for 2.8 seconds.  
One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K21) IAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K21) IAT SIGNAL CIRCUIT OPEN (K900) SENSOR GROUND CIRCUIT OPEN IAT SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. IAT SENSOR VOLTAGE ABOVE 4.98 VOLTS

Ignition on, engine not running.  
With a scan tool, read the Intake Air Temperature Sensor voltage.

- Is the voltage above 4.98 volts?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0113-INTAKE AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****2. IAT SENSOR**

Turn the ignition off.

Disconnect the Intake Air Temperature Sensor harness connector.

Connect a jumper wire between the (K21) IAT Signal circuit and the (K900) Sensor ground circuit in the IAT Sensor harness connector.

Ignition on, engine not running.

With a scan tool, read the IAT Sensor voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the IAT Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (K21) IAT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Ignition on, engine not running.

Measure the voltage on the (K21) IAT Signal circuit in the IAT Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K21) IAT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0113-INTAKE AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****4. (K21) IAT SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K21) IAT Signal circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K21) IAT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0113-INTAKE AIR TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE

## P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)

For the Engine System Schematic circuit diagram. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine off time is greater than 480 minutes. Ambient temperature is greater than 4 deg C (38 deg F).
- **Set Condition:**  
After a calibrated amount of cool down time, the PCM compares the ECT Sensor, IAT Sensor and the Ambient Air Temperature Sensor values. If the ECT Sensor value is not within calibrated temperature amount of the other two temperature sensors an error is detected. Two Trip Fault. Three good trips to turn off the MIL. (ETC lamp will illuminate with the MIL.)

Possible Causes
(K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K2) ECT SIGNAL CIRCUIT OPEN (K900) SENSOR GROUND CIRCUIT OPEN (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND ECT SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****2. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the ECT Sensor harness connector.

**Note: Visually inspect both the component and the PCM connectors. Look for damaged, partially broken wires, and backed out or corroded terminals.**

Ignition on, engine not running.

Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is voltage present?**

**Yes** >> Repair the short to battery voltage in the (K2) ECT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. ECT SENSOR VOLTAGE ABOVE 4.6 VOLTS**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage above 4.6 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

## P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)

### 4. ECT SENSOR

Connect a jumper wire between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector. With a scan tool, read the ECT voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the ECT Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

### 5. (K2) ECT SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K2) ECT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****6. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0116-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****8. (K2) ECT SIGNAL SHORTED TO THE (K900) SENSOR GROUND**

Measure the resistance between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K2) ECT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

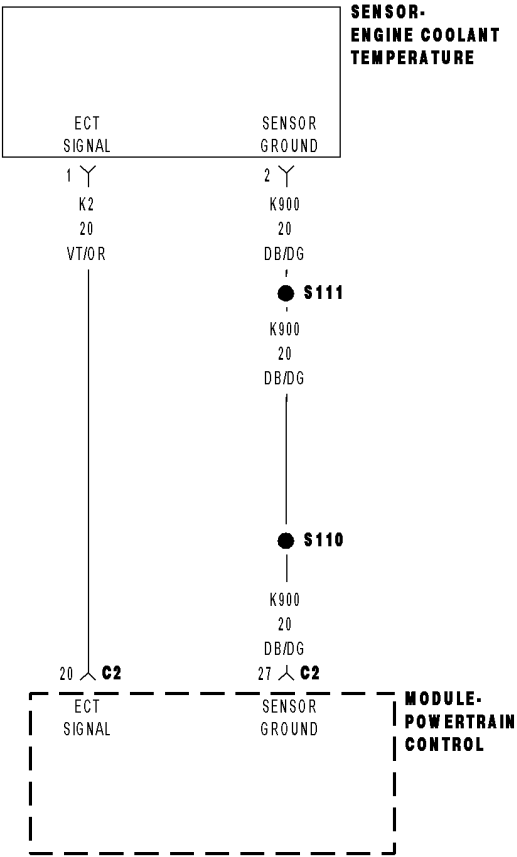

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

P0117-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT LOW

## P0117-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**  
The Engine Coolant Temperature (ECT) sensor circuit voltage at the PCM is less than 0.078 of a volt for more than 2.8 seconds. One Trip Fault. Three good trips to clear the MIL.

Possible Causes
(K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND ECT SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ECT SENSOR VOLTAGE BELOW 0.078 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage below 0.078 of a volt?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. ECT SENSOR

Turn the ignition off.

Disconnect the ECT harness connector.

Ignition on, engine not running.

With a scan tool, read ECT voltage.

**Is the voltage above 1.0 volt?**

- Yes** >> Replace the ECT Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 3

**P0117-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****3. (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between the (K900) Sensor ground circuit and the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to between the (K900) Sensor ground circuit and the (K2) ECT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K2) ECT SIGNAL CIRCUIT SHORTED GROUND**

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0117-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

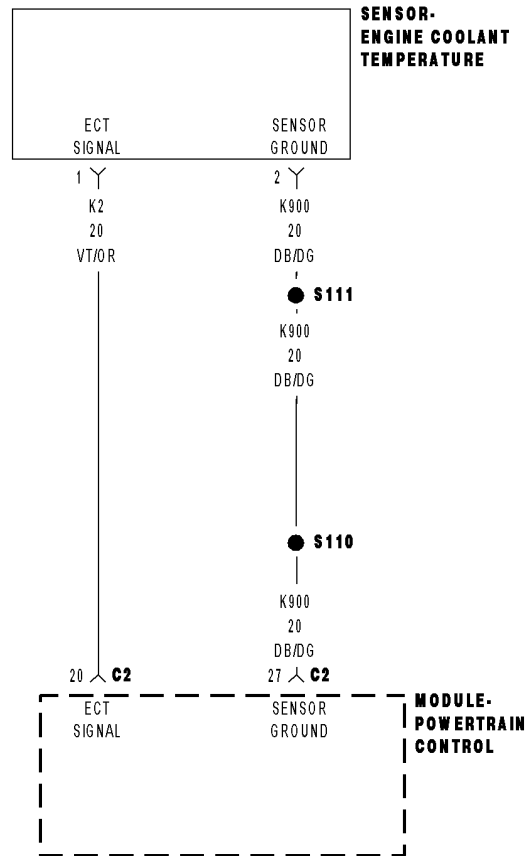

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH**

**P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. Battery voltage greater than 10.4 volts.

- **Set Condition:**

The Engine Coolant Temperature (ECT) sensor circuit voltage at the PCM is greater than 4.98 volts for more than 2.8 seconds. One Trip Fault. Three good trips to turn off the MIL. (ETC lamp will illuminate with the MIL.)

Possible Causes
(K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K2) ECT SIGNAL CIRCUIT OPEN
(K900) SENSOR GROUND CIRCUIT OPEN
ECT SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ECT SENSOR VOLTAGE ABOVE 4.98 VOLTS

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage above 4.98 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****2. ECT SENSOR**

Turn the ignition off.

Disconnect the ECT harness connector.

Connect a jumper wire between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT harness connector.

Ignition on, engine not running.

With a scan tool, read ECT voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the ECT Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is voltage present?**

**Yes** >> Repair the short to battery voltage in the (K2) ECT Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)

### 4. (K2) ECT SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K2) ECT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE

P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Ignition on and No MAP Sensor DTCs set.
- **Set Condition:**  
TP Sensor signals do not correlate to the MAP Sensor signal. One Trip Fault. ETC light will illuminate. P2135 should set with this code also.

Possible Causes
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE RESISTANCE IN THE (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO (K122) TP SENSOR NO.2 SIGNAL CIRCUIT THROTTLE POSITION SENSOR/THROTTLE BODY PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

- Note:** Diagnose any other TP Sensor DTC(s) before continuing.
- Note:** The throttle plate should be free from binding and carbon build up, make sure the throttle plate is at the idle position.  
Ignition on, engine not running.
- Note:** Inspect the engine for vacuum leaks, repair before continuing.
- With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**     >> Go To 11

**P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)****2. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (K22) TP No.1 Signal and the (K122) TP No.2 Signal circuits in the Throttle Body harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (K22) TP Sensor No.1 or (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)****3. THROTTLE POSITION SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor No.1 and No.2 voltage.

Connect a jumper wire between the (K922) Sensor Return circuit and the (K22) TP Sensor No.1 Signal circuit.

**Note: TP Sensor No.1 voltage should change from approximately 4.5 volts to less than 0.5 of a volt.**

For TP Sensor No.2, connect a jumper wire between (F855) 5-volt supply circuit and the (K122) TP Sensor No.2 signal circuit.

**Note: TP Sensor No.2 voltage should change from approximately 0 volts to 5.0 volts?**

**Is the voltage reading within the listed specification when the jumper wire is installed?**

**Yes** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note: Remove the jumper wire before continuing.**

## P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)

### 4. EXCESSIVE RESISTANCE IN THE (K22) TP SENSOR NO.1 SIGNAL CIRCUIT AND (K122) TP SENSOR NO.2 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

Measure the resistance of the (K122) TP Sensor No.2 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (K22) TP Sensor No.1 Signal circuit or the (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)****5. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit, and the (K122) TP Sensor No.2 Signal circuit in Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K22) TP Sensor No.1 Signal circuit or the (K122) TP Sensor No.2 Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

## P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)

### 6. EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 7. (F855) 5-VOLT SUPPLY SHORTED TO GROUND

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)****8. EXCESSIVE RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO (K122) TP SENSOR NO.2 SIGNAL CIRCUIT**

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (K122) TP Sensor No.2 Signal circuit in the Throttle Body harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K122) TP Sensor No.2 Signal circuit and the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0121-THROTTLE POSITION SENSOR 1 PERFORMANCE (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**11. THROTTLE FOLLOWER TEST**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test and monitor the TP Sensor No.1 or No.2 voltage.

Slowly press the throttle pedal down.

The voltage for TP Sensor No.1 should start at approximately 0.3 of a volt and increase to above 4.7 volts.

The voltage for TP Sensor No.2 should start at approximately 4.7 volts and decrease to approximately 0.3 of a volt.

**Is the voltage within the range of the listed specification for the appropriate Sensor?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

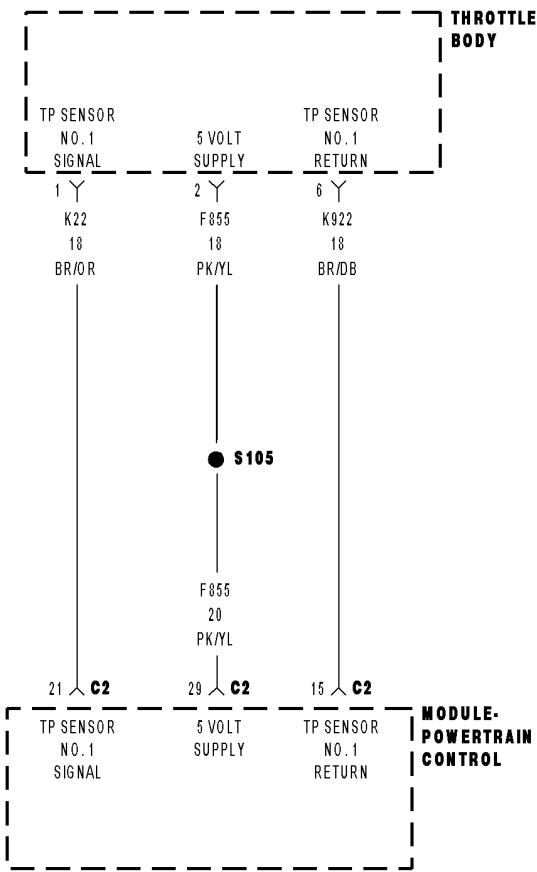

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW

**P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. Battery voltage greater than 10 volts.

- **Set Condition:**

Throttle Position Sensor voltage at the PCM is less than 0.16 of a volt for 0.7 of a second. One Trip Fault.

Three good trips to turn off the MIL. ETC light will illuminate.

Possible Causes
(F855) 5-VOLT SUPPLY CIRCUIT OPEN
(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K922) SENSOR RETURN CIRCUIT
THROTTLE POSITION SENSOR/THROTTLE BODY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** If a 5-Volt Supply DTC has also set, diagnose the 5-Volt DTC before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 10

**P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****2. P0222 ALSO SET**

**Was the P0222-TP SENSOR NO.2 VOLTAGE LOW DTC set along with the P0122?**

**Yes** >> Go To 3

**No** >> Go To 4

**3. (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the voltage between 4.8 to 5.2 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

## P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)

### 4. THROTTLE POSITION SENSOR

With a scan tool, monitor the TP Sensor No.1 voltage with the Sensor harness connector disconnected.

**Is the voltage above 4.5 volts?**

**Yes** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

### 5. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit in the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****6. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K922) SENSOR RETURN CIRCUIT**

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K922) Sensor Return circuit and the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**7. (F855) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnostics.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (F855) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)

### 8. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

## 9. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 10. THROTTLE FOLLOWER TEST

With a scan tool, perform the Throttle Follower Test.

Monitor the TP Sensor No.1 voltage.

**Does voltage start at approximately 0.8 of a volt and go above 3.5 volts with a smooth transition?**

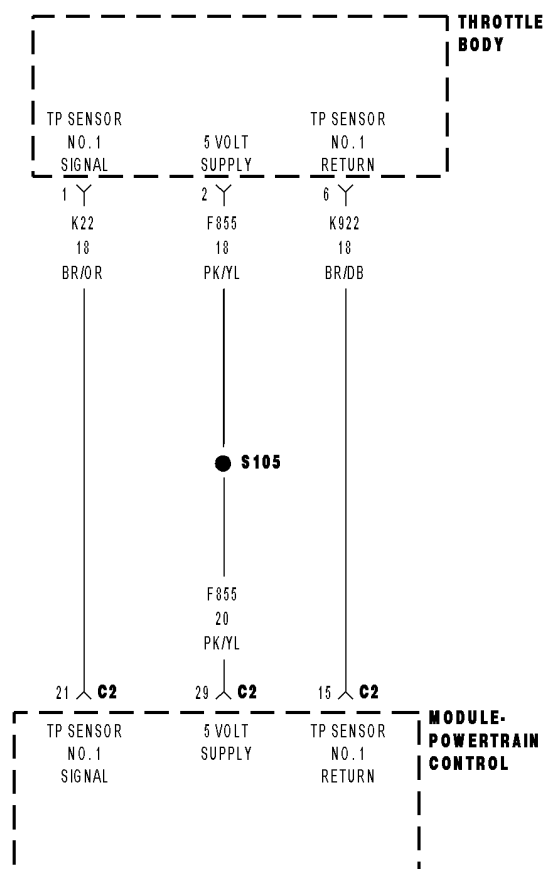

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool select ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH**

**P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. Battery voltage greater than 10 volts.

- **Set Condition:**

Throttle Position Sensor No.1 voltage is greater than 4.8 volts for 25 ms. One Trip Fault. ETC light will illuminate.

Possible Causes
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT OPEN
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT
(K922) SENSOR RETURN CIRCUIT OPEN
THROTTLE POSITION SENSOR/THROTTLE BODY
THROTTLE PLATE JAMMED AGAINST THE MAXIMUM STOP
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. TP SENSOR NO.1 VOLTAGE ABOVE 4.8 VOLTS

**Note:** Make sure the throttle is fully closed and free from binding or carbon build up.

**Note:** If a 5-Volt Supply DTC has also set, diagnose the 5-Volt DTC before continuing.

**Note:** If P2101 is also set, then make sure that the blade moves freely and does not hang up near Wide Open Throttle before trying to repair P0123.

Start the engine.

With a scan tool, read the TP Sensor No.1 voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 2

**No** >> Go To 8

**P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)****2. THROTTLE POSITION SENSOR**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

With a scan tool, monitor the TP Sensor No.1 voltage.

Ignition on, engine not running.

**Is the voltage below 0.5 of a volt with the jumper wire installed?**

**Yes** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool, select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K22) TP Sensor No.1 Signal circuit in the Throttle Body harness connector.

**Is voltage present?**

**Yes** >> Repair the short to battery voltage in the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)

### 4. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (F855) 5-volt Supply circuit and the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)****6. (K922) SENSOR RETURN CIRCUIT OPEN**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K922) Sensor Return circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)****8. THROTTLE FOLLOWER TEST**

With a scan tool, perform the Throttle Follower Test.

Monitor the TP Sensor No.1 voltage.

**Does voltage start at approximately 0.3 of a volt and go above 4.7 volts with a smooth transition?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

P0125-INSUFFICIENT COOLANT TEMP FOR CLOSED-LOOP FUEL CONTROL

## P0125-INSUFFICIENT COOLANT TEMP FOR CLOSED-LOOP FUEL CONTROL (CONTINUED)

For the Engine System circuit diagrams Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With battery voltage greater than 10.4 volts and after engine is started.
- **Set Condition:**  
The engine temperature does not enable closed loop. Failure time depends on start-up coolant temperature and ambient temperature. (i.e. 2 minutes for a start temp of 10°C (50°F) or up to 10 minutes for a vehicle with a start-up temp of -28°C (19°F). Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
LOW COOLANT LEVEL THERMOSTAT ECT SENSOR

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. CHECKING COOLANT LEVEL AND CONDITION

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note:** If an Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.

**Note:** Inspect the ECT terminals and related PCM terminals. Make sure the terminals are free from corrosion and damage.

**Note:** The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.

**Note:** Extremely cold outside ambient temperatures may have caused this DTC to set.

**WARNING:** Never open the cooling system when the engine is hot. The system is under pressure. Extreme burns or scalding may result. Failure to follow these instructions can result in personal injury or death. Allow the engine to cool before opening the cooling system.

Inspect the coolant system for proper level and condition.

**Is the coolant level and condition OK?**

**Yes** >> Go To 2

**No** >> Inspect the vehicle for a coolant leak, make the appropriate repairs, and add the correct amount of coolant.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0125-INSUFFICIENT COOLANT TEMP FOR CLOSED-LOOP FUEL CONTROL (CONTINUED)****2. THERMOSTAT OPERATION**

**Note:** This test works best if performed on a cold engine (cold soak)

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Temp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up monitor the Eng Coolant Temp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**Note:** As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tool Eng Coolant Temp Deg values should stay relatively close to each other.

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 3

**No** >> Replace the thermostat.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**3. ECT SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Temp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up monitor the Eng Coolant Temp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**Note:** As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tools Eng Coolant Temp Deg value should stay relatively close to each other.

**Is the thermometer reading relatively close to the scan tool ECT reading?**

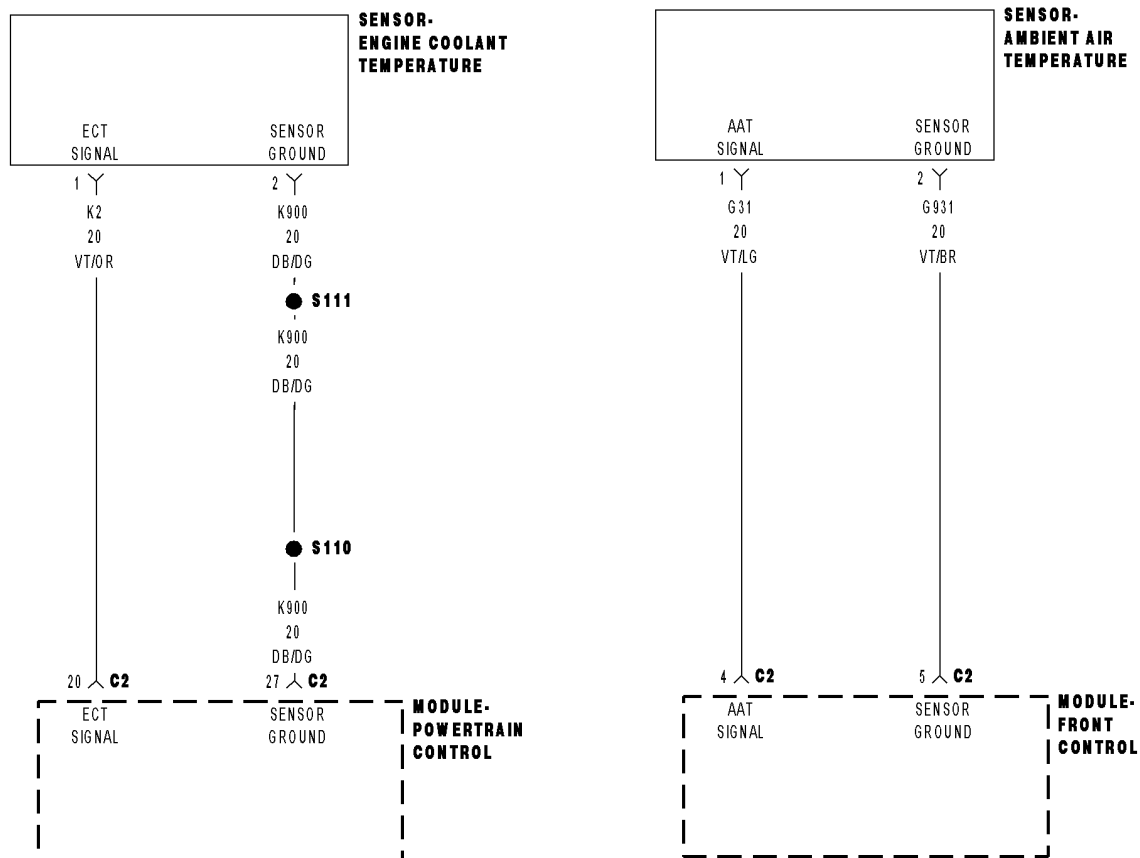

**Yes** >> Test Complete.

**No** >> Replace the Engine Coolant Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0128-THERMOSTAT RATIONALITY

**P0128-THERMOSTAT RATIONALITY (CONTINUED)**

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running.

- **Set Condition:**

The PCM predicts a coolant temperature value that it will compare to the actual coolant temperature. A significant difference results in an error. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
LOW COOLANT LEVEL THERMOSTAT OPERATION SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE TEMPERATURE SENSOR SIGNAL CIRCUIT OPEN (K900) SENSOR GROUND CIRCUIT OPEN SIGNAL CIRCUIT SHORTED TO GROUND SIGNAL CIRCUIT SHORTED TO (K900), (G931) SENSOR GROUND OTHER POSSIBLE CAUSES PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** If any ECT, AAT, CMP or CKP sensor DTCs have set along with P0128, diagnose them before continuing.

**Note:** Make sure that the Pinion Factor has been programmed correctly into the PCM.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****2. LOW COOLANT LEVEL**

**Note:** If an Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.

**Note:** Inspect the ECT terminals and related PCM terminals. Make sure the terminals are free from corrosion and damage.

**Note:** The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.

**Note:** Extremely cold outside ambient temperatures may have caused this DTC to set.

**WARNING:** Never open the cooling system when the engine is hot. The system is under pressure. Failure to follow these instructions can result in personal injury including extreme burns, scalding, or death. Allow the engine to cool before opening the cooling system.

Check the coolant system to make sure that the coolant is in good condition and at the proper level.

**Is the coolant level and condition OK?**

**Yes** >> Go To 3

**No** >> Inspect the vehicle for a coolant leak and add the necessary amount of coolant.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**3. THERMOSTAT OPERATION**

**Note:** This test works best if performed on a cold engine (cold soak).

Ignition on, engine not running.

With a scan tool, read the ECT Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up, monitor the ECT Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**Note:** As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tool, ECT Temperature value should stay relatively close to each other.

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 4

**No** >> Replace the thermostat.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**4. AMBIENT AIR TEMP SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, read and record the AAT Sensor Temperature value.

Using the DRB Temperature Probe #CH7050, or an equivalent temperature measuring tool, measure the ambient air temperature near the AAT Sensor.

**Is the AAT Sensor value with -15°C (5°F) of the temperature probe reading?**

**Yes** >> Go To 5

**No** >> Go To 7

---

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****5. ECT SENSOR OPERATION**

**WARNING:** Make sure the engine cooling system is cool before removing the pressure cap or any hose. The cooling system is pressurized when hot. Failure to follow these instructions can result in personal injury including extreme burns, scalding, or death.

With a scan tool, read and record the ECT Sensor Temperature value.

Use the DRB Temperature Probe #CH7050, or an equivalent temperature measuring tool, measure the engine coolant temperature.

**Is the ECT Sensor value with -15°C (5°F) of the temperature probe reading?**

**Yes** >> Go To 6

**No** >> Go To 7

---

**6. OTHER POSSIBLE CAUSES**

Inspect the Temperature Sensors for any physical damage.

Inspect the engine coolant. Make sure the coolant is at the proper level. Refer to the Service Information COOLING.

Make sure the Temperature Sensors are properly installed.

Make sure the CMP and CKP sensors are installed properly. Check the connectors for any signs of damage.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Refer to any Technical Service Bulletins (TSBs) that may apply.

With the engine running at normal operating temperature, monitor the Temperature sensor parameters while wiggling the wire harness. Look for parameter values to change.

Visually inspect the related wire harness. Look for any chafed, pierced, pinched, partially broken wires and broken, bent, pushed out, or corroded terminals.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Inspect and clean all PCM, engine, and chassis grounds.

**Were any problems found during the above inspections?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

---

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****7. SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

**Note:** Visually inspect both the component and the PCM/FCM connectors. Look for damage, partially broken wires and backed out or corroded terminals

Turn the ignition off.

Disconnect the applicable Temperature Sensor harness connector.

Disconnect the applicable controller harness connectors.

Ignition on, engine not running.

Measure the voltage on the Signal circuit at the Temperature Sensor harness connector.

**Is voltage present?**

**Yes** >> Repair the short to battery voltage in the Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****8. TEMPERATURE SENSOR**

Turn the ignition off.

Connect the controller harness connectors.

Connect a jumper wire across Sensor harness connectors.

Ignition on, engine not running.

With a scan tool, read the Temperature Sensor voltage.

**Does the voltage start at 5.0 volts and drop below 1.0 volt when the jumper wire is installed?**

**Yes** >> Replace the appropriate Temperature Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**Note: Disconnect the jumper wire before continuing.**

## P0128-THERMOSTAT RATIONALITY (CONTINUED)

### 9. SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the Sensor Signal circuit Sensor harness connector to the appropriate terminal of special tool #8815 or the FCM.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the open in the Sensor Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0128-THERMOSTAT RATIONALITY (CONTINUED)

## 10. SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the Sensor ground circuit from the appropriate Temperature Sensor harness connector to the appropriate terminal of special tool #8815 or the FCM.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 11

**No** >> Repair the open in the Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****11. SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the Sensor Signal circuit in the Temperature Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 12

## P0128-THERMOSTAT RATIONALITY (CONTINUED)

**12. SIGNAL CIRCUIT SHORTED TO SENSOR GROUND CIRCUIT**

Measure the resistance between the Signal circuit and the Sensor ground circuit in the Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the Sensor ground circuit and the Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

**P0128-THERMOSTAT RATIONALITY (CONTINUED)****13. FCM/PCM**

**Note:** Before continuing, check the FCM/PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

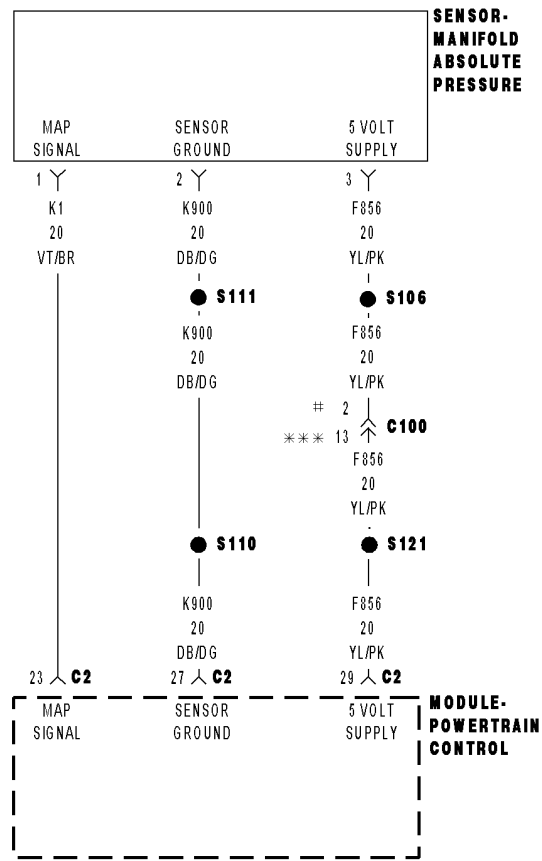

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace applicable Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW

**P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition key on. No Cam or Crank signal within 75 ms. Engine speed less than 250 RPM.

- **Set Condition:**

The PCM senses the voltage from the MAP sensor to be less than 2.2 volts but above 0.04 of a volt for 300 milliseconds. One Trip Fault. Three good trips to turn off the MIL. (ETC lamp will flash)

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE
(F856) 5-VOLT SUPPLY CIRCUIT OPEN
(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
(K1) MAP SIGNAL CIRCUIT OPEN
(K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND
(K1) MAP SIGNAL CIRCUIT SHORTED TO (K900) SENSOR GROUND
MAP SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time.**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 7

**3. MAP SENSOR**

With a scan tool, monitor the MAP Sensor voltage with the Sensor harness connector disconnected.

**Is the voltage above 2.2 volts?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)

### 4. (K1) MAP SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K1) MAP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K900) Sensor ground circuit and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground circuit and the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)****6. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

- Yes** >> Repair the short to ground in the (K1) MAP Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the voltage above 5.2 volts?**

- Yes** >> Repair the short to battery voltage in the (F856) 5-volt Supply circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 8

**P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)****8. (F856) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (F856) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0131-O2 SENSOR 1/1 CIRCUIT LOW

**P0131-O2 SENSOR 1/1 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.4 volts.

- **Set Condition:**

The oxygen sensor signal voltage is below 1.5 volts for 3 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K902) O2 RETURN UPSTREAM CIRCUIT SHORTED TO GROUND
(K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO GROUND
(K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO (K902) O2 RETURN UPSTREAM CIRCUIT
(K41) O2 1/1 SIGNAL SHORTED TO THE (Z904) O2 1/1 HEATER GROUND CIRCUIT
O2 SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. O2 SENSOR BELOW 1.5 VOLTS**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/1 O2 Sensor voltage.

**Is the voltage below 1.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0131-O2 SENSOR 1/1 CIRCUIT LOW (CONTINUED)

### 2. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 1/1 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the O2 Sensor voltage.

**Is the 1/1 O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

### 3. O2 SENSOR

Measure the voltage on the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

### 4. (K902) O2 RETURN UPSTREAM CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K902) O2 Return Upstream circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0131-O2 SENSOR 1/1 CIRCUIT LOW (CONTINUED)****5. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K41) O2 Sensor 1/1 Signal circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K41) O2 Sensor 1/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO (K902) O2 RETURN UPSTREAM CIRCUIT**

Measure the resistance between the (K41) O2 Sensor 1/1 Signal circuit and the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K902) O2 Return Upstream circuit and the (K41) O2 Sensor 1/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**P0131-O2 SENSOR 1/1 CIRCUIT LOW (CONTINUED)****7. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO THE (Z904) O2 1/1 HEATER GROUND CIRCUIT**

Measure the resistance between the (K41) O2 Sensor 1/1 Signal circuit and the (Z904) O2 1/1 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z904) O2 1/1 Heater ground circuit and the (K41) O2 Sensor 1/1 Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0132-O2 SENSOR 1/1 CIRCUIT HIGH

### P0132-O2 SENSOR 1/1 CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagrams (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.4 volts.
- Set Condition:**  
The Oxygen Sensor voltage is above 3.7 volts for 40 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE (K41) O2 1/1 SIGNAL CIRCUIT OPEN (K902) O2 UPSTREAM RETURN CIRCUIT OPEN O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### Diagnostic Test

#### 1. O2 SENSOR ABOVE 3.7 VOLTS

**Note:** When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/1 O2 Sensor voltage.

**Is the voltage above 3.7 volts?**

**Yes**    >> Go To 2

**No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0132-O2 SENSOR 1/1 CIRCUIT HIGH (CONTINUED)****2. (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Start the engine and allow the engine to idle.

Disconnect the 1/1 O2 Sensor harness connector.

Measure the voltage on the (K41) O2 Sensor 1/1 Signal circuit in the 1/1 O2 Sensor harness connector.

**Note:** Measure the voltage in reference to ground, not the (K902) O2 Upstream Return circuit.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K41) O2 Sensor 1/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the 1/1 O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K902) O2 Upstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0132-O2 SENSOR 1/1 CIRCUIT HIGH (CONTINUED)

### 4. 1/1 O2 SENSOR

Turn the ignition off.

Connect the PCM harness connectors.

Connect a jumper wire between the (K41) O2 1/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 1/1 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

### 5. (K41) O2 1/1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K41) O2 1/1 Signal circuit from the 1/1 O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K41) O2 1/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0132-O2 SENSOR 1/1 CIRCUIT HIGH (CONTINUED)****6. (K902) O2 UPSTREAM RETURN CIRCUIT OPEN**

Measure the resistance of the (K902) O2 Upstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K902) O2 Upstream Return circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0133-O2 SENSOR 1/1 SLOW RESPONSE

**P0133-O2 SENSOR 1/1 SLOW RESPONSE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.

- **Set Condition:**

The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK (K41) O2 1/1 SIGNAL CIRCUIT (K902) O2 RETURN UPSTREAM CIRCUIT O2 SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

## P0133-O2 SENSOR 1/1 SLOW RESPONSE (CONTINUED)

### 3. (K41) O2 1/1 SIGNAL CIRCUIT

Turn the ignition off

Disconnect the 1/1 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K41) O2 1/1 Signal circuit in the O2 Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K41) O2 1/1 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 4. (K902) O2 RETURN UPSTREAM CIRCUIT

Measure the voltage on the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 5

**No** >> Check the (K902) O2 Return Upstream circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 5. O2 SENSOR

**If there are no possible causes remaining, view repair.**

### Repair

Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0135-O2 SENSOR 1/1 HEATER PERFORMANCE

**P0135-O2 SENSOR 1/1 HEATER PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.

- **Set Condition:**

No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

Possible Causes
(K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN
(Z904) O2 1/1 HEATER GROUND CIRCUIT OPEN
O2 SENSOR HEATER ELEMENT
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 1/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0135-O2 SENSOR 1/1 HEATER PERFORMANCE (CONTINUED)****2. O2 SENSOR HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 sensor to cool down to room temperature.

Disconnect the O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the 1/1 O2 Sensor connector between the O2 Heater Control terminal and the Heater ground terminal.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN**

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K99) O2 1/1 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K99) O2 1/1 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0135-O2 SENSOR 1/1 HEATER PERFORMANCE (CONTINUED)****4. (Z904) O2 1/1 HEATER GROUND CIRCUIT OPEN**

Measure the resistance between ground and the (Z904) O2 1/1 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z904) O2 1/1 Heater ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0137-O2 SENSOR 1/2 CIRCUIT LOW**

**P0137-O2 SENSOR 1/2 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.

- **Set Condition:**

The oxygen sensor signal voltage is below 1.5 volts for 3 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND
(K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO GROUND
(K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO (K904) O2 DOWNSTREAM RETURN CIRCUIT
(K141) O2 1/2 SIGNAL SHORTED TO THE (Z902) O2 1/2 HEATER GROUND CIRCUIT
O2 SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 1.5 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/2 O2 Sensor voltage.

**Is the voltage below 1.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. (K141) O2 1/2 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 1/2 O2 Sensor voltage.

**Is the O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

**P0137-O2 SENSOR 1/2 CIRCUIT LOW (CONTINUED)****3. O2 SENSOR**

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K904) O2 Downstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

## P0137-O2 SENSOR 1/2 CIRCUIT LOW (CONTINUED)

### 5. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K141) O2 1/2 Signal circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K141) O2 1/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

### 6. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the resistance between the (K141) O2 1/2 Signal circuit and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K904) O2 Downstream Return circuit and the (K141) O2 1/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

## P0137-02 SENSOR 1/2 CIRCUIT LOW (CONTINUED)

**7. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO (Z902) O2 1/2 HEATER GROUND CIRCUIT**

Measure the resistance between the (K141) O2 1/2 Signal circuit and the (Z902) O2 1/2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z902) O2 1/2 Heater ground circuit and the (K141) O2 1/2 Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

## 8. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

### Were there any problems found?

**Yes**    >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0138-O2 SENSOR 1/2 CIRCUIT HIGH

P0138-O2 SENSOR 1/2 CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- **Set Condition:**  
The Oxygen Sensor voltage is above 3.7 volts for 30 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE
(K141) O2 1/2 SENSOR SIGNAL CIRCUIT OPEN
(K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN
O2 SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. O2 SENSOR ABOVE 3.7 VOLTS

**Note:** When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/2 O2 Sensor voltage.

Is the voltage above 3.7 volts?

- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0138-O2 SENSOR 1/2 CIRCUIT HIGH (CONTINUED)

### 2. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Start the engine and allow the engine to idle.

Disconnect the 1/2 O2 Sensor harness connector.

Measure the voltage on the (K141) O2 Sensor 1/2 Signal circuit in the O2 Sensor harness connector.

**Note: Measure the voltage in reference to ground, not the (K904) O2 Downstream Return circuit.**

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K141) O2 Sensor 1/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K904) O2 Downstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0138-O2 SENSOR 1/2 CIRCUIT HIGH (CONTINUED)****4. O2 SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Connect a jumper wire between the (K141) O2 1/2 Signal circuit and the (K904) O2 Downstream Return circuit in the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 1/2 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. (K141) O2 1/2 SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K141) O2 1/2 Signal circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K141) O2 1/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0138-O2 SENSOR 1/2 CIRCUIT HIGH (CONTINUED)

### 6. (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K904) O2 Downstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

- Yes** >> Go To 7
- No** >> Repair the open in the (K904) O2 Downstream Return circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 7. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0139-O2 SENSOR 1/2 SLOW RESPONSE**

**P0139-O2 SENSOR 1/2 SLOW RESPONSE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.

- **Set Condition:**

The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK (K141) O2 1/2 SIGNAL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT O2 SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0139-O2 SENSOR 1/2 SLOW RESPONSE (CONTINUED)****3. (K141) O2 1/2 SIGNAL CIRCUIT**

Turn the ignition off

Disconnect the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K141) O2 1/2 Signal circuit in the O2 Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K141) O2 1/2 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. (K904) O2 DOWNSTREAM RETURN CIRCUIT**

Measure the voltage on the (K904) O2 Downstream Return circuit in the 1/2 O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 5

**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. O2 SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0141-O2 SENSOR 1/2 HEATER PERFORMANCE

P0141-O2 SENSOR 1/2 HEATER PERFORMANCE (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.
- **Set Condition:**  
No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

Possible Causes
(K299) O2 1/2 HEATER CONTROL CIRCUIT OPEN (Z902) O2 HEATER GROUND CIRCUIT OPEN O2 SENSOR HEATER ELEMENT PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 1/2 O2 Sensor voltage for at least 2 minutes.

Does the voltage stay above 4.5 volts?

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0141-O2 SENSOR 1/2 HEATER PERFORMANCE (CONTINUED)****2. O2 SENSOR HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 sensor to cool down to room temperature.

Disconnect the O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the O2 Sensor connector between the O2 Heater Control terminal and the Heater ground terminal.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (K299) O2 1/2 HEATER CONTROL CIRCUIT OPEN**

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K299) O2 1/2 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K299) O2 1/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0141-O2 SENSOR 1/2 HEATER PERFORMANCE (CONTINUED)****4. (Z902) O2 1/2 HEATER GROUND CIRCUIT OPEN**

Measure the resistance between ground and the (Z902) O2 1/2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z902) O2 1/2 Heater ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0151-O2 SENSOR 2/1 CIRCUIT LOW

**P0151-O2 SENSOR 2/1 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.

- **Set Condition:**

The oxygen sensor signal voltage is below 1.5 volts for 3 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO GROUND
(K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO GROUND
(K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO (K902) O2 UPSTREAM RETURN CIRCUIT
(K43) O2 2/1 SIGNAL SHORTED TO THE (Z904) HEATER GROUND CIRCUIT
O2 SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 1.5 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/1 O2 Sensor voltage.

**Is the voltage below 1.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. (K43) O2 2/1 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 2/1 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/1 O2 Sensor voltage.

**Is the O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

**P0151-O2 SENSOR 2/1 CIRCUIT LOW (CONTINUED)****3. O2 SENSOR**

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K902) O2 Upstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0151-O2 SENSOR 2/1 CIRCUIT LOW (CONTINUED)****5. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K43) O2 2/1 Signal circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K43) O2 2/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO (K902) O2 UPSTREAM RETURN CIRCUIT**

Measure the resistance between the (K43) O2 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K902) O2 Upstream Return circuit and the (K43) O2 2/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**P0151-O2 SENSOR 2/1 CIRCUIT LOW (CONTINUED)****7. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO (Z904) HEATER GROUND CIRCUIT**

Measure the resistance between the (K43) O2 2/1 Signal circuit and the (Z904) O2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z904) O2 Heater ground circuit and the (K43) O2 2/1 Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0152-O2 SENSOR 2/1 CIRCUIT HIGH**

### P0152-O2 SENSOR 2/1 CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- Set Condition:**  
The Oxygen Sensor voltage is above 3.7 volts for 30 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE (K43) O2 2/1 SIGNAL CIRCUIT OPEN (K902) O2 UPSTREAM RETURN CIRCUIT OPEN O2 SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### Diagnostic Test

#### 1. O2 SENSOR ABOVE 3.7 VOLTS

**Note:** When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/1 O2 Sensor voltage.

**Is the voltage above 3.7 volts?**

**Yes**    >> Go To 2

**No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0152-O2 SENSOR 2/1 CIRCUIT HIGH (CONTINUED)****2. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Start the engine and allow the engine to idle.

Disconnect the 2/1 O2 Sensor harness connector.

Measure the voltage on the (K43) O2 Sensor 2/1 Signal circuit in the 2/1 O2 Sensor harness connector.

**Note:** Measure the voltage in reference to ground, not the (K902) O2 Upstream Return circuit.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K43) O2 Sensor 2/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the 2/1 O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K902) O2 Upstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0152-O2 SENSOR 2/1 CIRCUIT HIGH (CONTINUED)

### 4. O2 SENSOR

Turn the ignition off.

Connect the PCM harness connectors.

Connect a jumper wire between the (K43) O2 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/1 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire in place?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

### 5. (K43) O2 2/1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K43) O2 2/1 Signal circuit from the 2/1 O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K43) O2 2/1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0152-O2 SENSOR 2/1 CIRCUIT HIGH (CONTINUED)****6. (K902) O2 UPSTREAM RETURN CIRCUIT OPEN**

Measure the resistance of the (K902) O2 Upstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K902) O2 Upstream Return circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0153-O2 SENSOR 2/1 SLOW RESPONSE

**P0153-O2 SENSOR 2/1 SLOW RESPONSE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.

- **Set Condition:**

The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK (K43) O2 2/1 SIGNAL CIRCUIT (K902) O2 UPSTREAM RETURN CIRCUIT O2 SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With a scan tool, read DTCs and record the related Freeze Frame data.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0153-O2 SENSOR 2/1 SLOW RESPONSE (CONTINUED)****3. (K43) O2 2/1 SIGNAL CIRCUIT**

Turn the ignition off

Disconnect the O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K43) O2 2/1 Signal circuit in the O2 Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K43) O2 2/1 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. (K902) O2 UPSTREAM RETURN CIRCUIT**

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 5

**No** >> Check the (K902) O2 Upstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. O2 SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0155-O2 SENSOR 2/1 HEATER PERFORMANCE

**P0155-O2 SENSOR 2/1 HEATER PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.

- **Set Condition:**

No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

Possible Causes
(K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN
(Z904) O2 HEATER GROUND CIRCUIT OPEN
O2 SENSOR HEATER ELEMENT
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 2/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0155-O2 SENSOR 2/1 HEATER PERFORMANCE (CONTINUED)****2. O2 SENSOR HEATER ELEMENT**

Turn the ignition off.

**Note:** Allow the O2 sensor to cool down to room temperature.

Disconnect the 2/1 O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the O2 Sensor connector between the O2 Heater Control terminal and the O2 Heater ground terminal.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN**

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K199) O2 2/1 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K199) O2 2/1 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0155-O2 SENSOR 2/1 HEATER PERFORMANCE (CONTINUED)****4. (Z904) O2 SENSOR HEATER GROUND CIRCUIT OPEN**

Measure the resistance between ground and the (Z904) O2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z904) O2 Heater ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Wiring Diagram:**

- SENSOR-OXYGEN-RIGHT REAR (Z904, DB/DG):**
  - Pin 1: Connected to K399 (20, BR/GY)
  - Pin 3: Connected to Z904 (20, DB/DG)
  - Pin 4: Connected to K243 (20, BR)
- MODULE-POWERTRAIN CONTROL (C1, C3):**
  - Pin 10: 02 2/2 HEATER CONTROL (C3)
  - Pin 33: 02 2/2 SIGNAL (C1)
  - Pin 32: 02 RETURN (DOWN) (C1)
- Fuses:**
  - G100: Connected to Z902 (20, BK/LB)
  - S125: Connected to Z904 (20, DB/DG)

**Connector Views:**

- MODULE-POWERTRAIN CONTROL C3:** Shows a 38-pin connector with a natural label.

**P0157-O2 SENSOR 2/2 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.

- **Set Condition:**

The oxygen sensor signal voltage is below 1.5 volts for 3 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND
(K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO GROUND
(K243) O2 SIGNAL CIRCUIT SHORTED TO (K904) O2 DOWNSTREAM RETURN CIRCUIT
(K243) O2 SIGNAL SHORTED TO THE (Z902) O2 2/2 HEATER GROUND CIRCUIT
O2 SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 1.5 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/2 O2 Sensor voltage.

**Is the voltage below 1.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0157-O2 SENSOR 2/2 CIRCUIT LOW (CONTINUED)****2. (K243) O2 2/2 SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/2 O2 Sensor voltage.

**Is the O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

**3. O2 SENSOR**

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K904) O2 Downstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0157-O2 SENSOR 2/2 CIRCUIT LOW (CONTINUED)****5. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K243) O2 2/2 Signal circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K243) O2 2/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO THE (K904) O2 DOWNSTREAM RETURN CIRCUIT**

Measure the resistance between the (K243) O2 2/2 Signal circuit and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K904) O2 Downstream Return circuit and the (K243) O2 2/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**P0157-O2 SENSOR 2/2 CIRCUIT LOW (CONTINUED)****7. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO (Z902) O2 2/2 HEATER GROUND CIRCUIT**

Measure the resistance between the (K243) O2 2/2 Signal circuit and the (Z902) O2 2/2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z902) O2 2/2 Heater ground circuit and the (K243) O2 2/2 Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0158-O2 SENSOR 2/2 CIRCUIT HIGH

P0158-O2 SENSOR 2/2 CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- **Set Condition:**  
The Oxygen Sensor voltage is above 3.7 volts for 30 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K243) O22/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE
(K243) O2 2/2 SIGNAL CIRCUIT OPEN
(K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN
O2 SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. O2 SENSOR ABOVE 3.7 VOLTS

**Note:** When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/2 O2 Sensor voltage.

**Is the voltage above 3.7 volts?**

**Yes**    >> Go To 2

**No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0158-O2 SENSOR 2/2 CIRCUIT HIGH (CONTINUED)****2. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Start the engine and allow the engine to idle.

Disconnect the 2/2 O2 Sensor harness connector.

Measure the voltage on the (K243) O2 Sensor 2/2 Signal circuit in the O2 Sensor harness connector.

**Note:** Measure the voltage in reference to ground, not the (K904) O2 Downstream Return circuit.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K243) O2 Sensor 2/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K904) O2 Downstream Return circuit in the 2/2 O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K904) O2 Downstream Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0158-O2 SENSOR 2/2 CIRCUIT HIGH (CONTINUED)****4. O2 SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Connect a jumper wire between the (K243) O2 2/2 Signal circuit and the (K904) O2 Downstream Return circuit in the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/2 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. (K243) O2 2/2 SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K243) O2 2/2 Signal circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K243) O2 2/2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0158-O2 SENSOR 2/2 CIRCUIT HIGH (CONTINUED)

### 6. (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K904) O2 Downstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

- Yes** >> Go To 7
- No** >> Repair the open in the (K904) O2 Downstream Return circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 7. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0159-O2 SENSOR 2/2 SLOW RESPONSE**

**P0159-O2 SENSOR 2/2 SLOW RESPONSE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.

- **Set Condition:**

The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK (K243) O2 2/2 SIGNAL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT O2 SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0159-O2 SENSOR 2/2 SLOW RESPONSE (CONTINUED)****3. (K243) O2 2/2 SIGNAL CIRCUIT**

Turn the ignition off

Disconnect the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K243) O2 2/2 Signal circuit in the O2 Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K243) O2 2/2 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. (K904) O2 DOWNSTREAM RETURN CIRCUIT**

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 5

**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. O2 SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0161-O2 SENSOR 2/2 HEATER PERFORMANCE

**P0161-O2 SENSOR 2/2 HEATER PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.

- **Set Condition:**

No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

Possible Causes
(K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN
(Z902) O2 2/2 HEATER GROUND CIRCUIT OPEN
O2 SENSOR HEATER ELEMENT
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING.**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**Note:** Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With a scan tool, monitor 2/2 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0161-O2 SENSOR 2/2 HEATER PERFORMANCE (CONTINUED)

### 2. O2 SENSOR HEATER ELEMENT

Turn the ignition off.

**Note:** Allow the O2 sensor to cool down to room temperature.

Disconnect the O2 Sensor harness connector.

Measure the resistance of the 2/2 O2 Heater Element, between the O2 Heater Control terminal and the O2 Heater ground terminal in the O2 Sensor connector.

**Note:** O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 3. (K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K399) O2 2/2 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K399) O2 2/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0161-O2 SENSOR 2/2 HEATER PERFORMANCE (CONTINUED)****4. (Z902) O2 2/2 HEATER GROUND CIRCUIT OPEN**

Measure the resistance between ground and the (Z902) O2 2/2 Heater ground circuit in the O2 Sensor harness connector.

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z902) O2 2/2 Heater ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0171-FUEL SYSTEM 1/1 LEAN

P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.
- **Set Condition:**  
If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL

Possible Causes
RESTRICTED FUEL SUPPLY LINE FUEL PUMP INLET STRAINER PLUGGED FUEL PUMP MODULE O2 SIGNAL CIRCUIT O2 RETURN CIRCUIT O2 SENSOR HEATER OPERATION O2 SENSOR MAP SENSOR OPERATION ECT SENSOR OPERATION ENGINE MECHANICAL PROBLEM FUEL FILTER/PRESSURE REGULATOR (HIGH) PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Diagnose all other trouble codes before continuing.

**Note: Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)****2. CHECKING FUEL PRESSURE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Turn the ignition off.

**CAUTION:** Stop All Actuations.

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Below Specification**

Go To 12

---

**3. O2 SENSOR OPERATION**

Start the engine.

Allow the engine to reach normal operating temperature.

**Note:** If one of the O2 Sensor's Signal or Return circuit is shorted to ground the scan tool will display all O2 Sensor voltage readings low. The O2 Sensor that is shorted to ground will display a voltage reading near or at 0 volts.

**Note:** If one of the O2 Sensor Signal or Return circuits are shorted to voltage, the scan tool will display all O2 Sensor voltage readings high.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With a scan tool, monitor all of the O2 Sensor voltage readings.

Is the voltage switching between 2.5 and 3.4 volts for all the O2 Sensors?

**Yes** >> Go To 4

**No** >> Go To 8

---

**P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)****4. 1/1 O2 SENSOR HEATER OPERATION**

Turn the ignition off.

**Note:** Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With a scan tool, actuate the 1/1 O2 Heater Test.

With the scan tool, monitor 1/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Replace the 1/1 O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. MAP SENSOR OPERATION**

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**Note:** If engine will not idle, maintain a constant RPM above idle.

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1" of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**6. ECT SENSOR OPERATION**

**Note:** For this test to be valid, the thermostat must be operating correctly.

**Note:** This test works best if performed on a cold engine (cold soak)

Ignition on, engine not running.

With a scan tool, read the Engine Coolant Temperature (ECT) Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up, monitor the ECT Sensor value. The temperature value change should be a smooth transition from start up to normal operating temperature 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and did it reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)****7. ENGINE MECHANICAL PROBLEM**

Turn the ignition off.

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**8. 1/1 O2 SENSOR**

Ignition on, engine not running.

Disconnect the 1/1 O2 Sensor harness connector.

With a scan tool, monitor the 1/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K41) Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor voltage change from 5.0 volts to 2.5 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**Note: Remove the jumper wire before continuing.**

## P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)

## 9. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT

With a scan tool, monitor the 1/1 O2 Sensor voltage reading with the jumper wire removed.

**Note:** The scan tool will display all O2 Sensor voltage readings approximately 5.0 volts when only one O2 Sensor's Signal circuit is shorted to voltage.

**Note:** The scan tool will display one O2 Sensor voltage close to zero and the others will read lower than normal when one O2 Sensor Signal circuit contains excessive resistance.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 10

**No** >> Check the (K41) O2 Sensor 1/1 Signal circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 10. (K902) O2 UPSTREAM RETURN CIRCUIT

Disconnect the 1/1 O2 Sensor harness connector.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 11

**No** >> Check the O2 Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)****11. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**12. RESTRICTED FUEL SUPPLY LINE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special 5/16 fuel line adapter tool #6539 between disconnected fuel line and the fuel pump module.

Attach a fuel pressure test gauge to the T fitting on tool #6539.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**CAUTION:** Stop All Actuations.

**Is the fuel pressure within specification?**

- Yes** >> Repair or replace fuel supply line as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 13
-

**P0171-FUEL SYSTEM 1/1 LEAN (CONTINUED)****13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 14

---

**14. FUEL PUMP MODULE**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0172-FUEL SYSTEM 1/1 RICH

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive and a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
O2 SENSOR HEATER OPERATION
EVAP PURGE SOLENOID OPERATION
O2 SIGNAL CIRCUIT
O2 RETURN CIRCUIT
O2 SENSOR
MAP SENSOR
ECT SENSOR
ENGINE MECHANICAL PROBLEM
FUEL FILTER/PRESSURE REGULATOR (HIGH)
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note: Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)****2. CHECKING FUEL PRESSURE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Turn the ignition off.

**CAUTION:** Stop All Actuations.

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**3. O2 SENSOR OPERATION**

Start the engine.

Allow the engine to reach normal operating temperature.

**Note:** If one of the O2 Sensors Signal or Return circuit is shorted to ground or voltage, all the other O2 Sensor voltage readings will be affected.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With the scan tool, monitor the 1/1 O2 Sensor voltage reading.

**Is the voltage switching between 2.5 and 3.4 volts?**

**Yes** >> Go To 4

**No** >> Go To 9

---

**4. 1/1 O2 SENSOR HEATER OPERATION**

Turn the ignition off.

**Note:** Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With the scan tool, perform the 1/1 O2 Heater Test.

With the scan tool, monitor the O2 Sensor voltage while performing the Heater test for at least 2 minutes.

**Does the voltage stay above 4.5 volts during the Heater test?**

**Yes** >> Replace the O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)****5. MAP SENSOR OPERATION**

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**Note: If engine will not idle, maintain a constant RPM above idle.**

With a scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1" of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note: Remove the vacuum gauge before continuing.**

---

**6. ECT SENSOR OPERATION**

**Note: For this test to be valid, the thermostat must be operating correctly.**

**Note: This test works best if performed on a cold engine (cold soak)**

Ignition on, engine not running.

With a scan tool, read the Engine Coolant Temperature Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temp value change should be a smooth transition from start up to normal operating temp 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. EVAP PURGE SOLENOID OPERATION**

Turn the ignition off.

Disconnect the hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 inches of vacuum to the Evap Purge Solenoid vacuum source port on the component side.

**Did the Evap Purge Solenoid hold vacuum?**

**Yes** >> Go To 8

**No** >> Replace the EVAP Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note: Connect the vacuum hoses before continuing.**

---

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)****8. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from restrictions.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 12

**9. 1/1 O2 SENSOR**

**Note: Perform the following test on the O2 Sensors whose voltage was not switching properly in the previous step.**

Ignition on, engine not running.

Disconnect the 1/1 O2 Sensor harness connector.

With a scan tool, monitor the 1/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K41) O2 Sensor 1/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts down to 2.5 volts with the jumper wire connected.**

**Did the O2 Sensor voltage drop from 5 volts to 2.5 volts when the jumper wire was installed?**

**Yes** >> Replace the 1/1 O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**Note: Remove the jumper wire before continuing.**

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)****10. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT**

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Start the engine.

Measure the voltage on the (K41) O2 Sensor 1/1 Signal circuit in the O2 Sensor harness connector.

**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K41) O2 Sensor 1/1 Signal circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (K902) O2 SENSOR UPSTREAM RETURN CIRCUIT**

Engine still running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the 1/1 O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 12

**No** >> Check the (K902) O2 Upstream Return circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note:** Turn the ignition off before continuing.

**P0172-FUEL SYSTEM 1/1 RICH (CONTINUED)****12. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0174-FUEL SYSTEM 2/1 LEAN**

## P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
RESTRICTED FUEL SUPPLY LINE
FUEL PUMP INLET STRAINER PLUGGED
FUEL PUMP MODULE
O2 SIGNAL CIRCUIT
O2 RETURN CIRCUIT
O2 SENSOR HEATER OPERATION
O2 SENSOR
MAP SENSOR OPERATION
ECT SENSOR OPERATION
ENGINE MECHANICAL PROBLEM
FUEL FILTER/PRESSURE REGULATOR (HIGH)
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Diagnose all other trouble codes before continuing.

**Note: Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)****2. CHECKING FUEL PRESSURE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Turn the ignition off.

**CAUTION:** Stop All Actuators.

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Below Specification**

Go To 12

---

**3. O2 SENSOR OPERATION**

Start the engine.

Allow the engine to reach normal operating temperature.

**Note:** If one of the O2 Sensor's Signal or Return circuit is shorted to ground the scan tool will display all O2 Sensor voltage readings low. The O2 Sensor that is shorted to ground will display a voltage reading near or at 0 volts.

**Note:** If one of the O2 Sensor Signal or Return circuits are shorted to voltage, the scan tool will display all O2 Sensor voltage readings high.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With the scan tool, monitor the 2/1 O2 Sensor voltage reading.

Is the voltage switching between 2.5 and 3.4 volts?

**Yes** >> Go To 4

**No** >> Go To 8

---

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)****4. 2/1 O2 SENSOR HEATER OPERATION**

Turn the ignition off.

**Note:** Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

**Note:** Perform the following test on all O2 Sensors.

Ignition on, engine not running.

With a scan tool, actuate the 2/1 O2 Heater Test.

With the scan tool, monitor 2/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. MAP SENSOR OPERATION**

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**Note:** If engine will not idle, maintain a constant RPM above idle.

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1" of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**6. ECT SENSOR OPERATION**

**Note:** For this test to be valid, the thermostat must be operating correctly.

**Note:** This test works best if performed on a cold engine (cold soak).

Ignition on, engine not running.

With the scan tool, read the Engine Coolant Temperature (ECT) Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up, monitor the ECT Sensor value. The temperature value change should be a smooth transition from start up to normal operating temperature 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and did it reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)****7. ENGINE MECHANICAL PROBLEM**

Turn the ignition off.

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**8. O2 SENSOR**

Ignition on, engine not running.

Disconnect the 2/1 O2 Sensor harness connector.

With the scan tool, monitor the 2/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K43) O2 Sensor 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor voltage change from 5.0 volts to 2.5 volts when the jumper wire was installed?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**Note: Remove the jumper wire before continuing.**

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)****9. O2 SENSOR SIGNAL CIRCUIT**

With the scan tool, monitor all the O2 Sensor voltage reading with the jumper wire removed.

**Note:** The scan tool will display all O2 Sensor voltage readings approximately 5.0 volts when only one O2 Sensor's Signal circuit is shorted to voltage.

**Note:** The scan tool will display one O2 Sensor voltage close to zero and the others will read lower than normal when one O2 Sensor Signal circuit contains excessive resistance.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 10

**No** >> Check all the O2 Signal circuits for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**10. (K902) O2 UPSTREAM RETURN CIRCUIT**

Disconnect the 2/1 O2 Sensor harness connector.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 11

**No** >> Check the (K902) O2 Upstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)****11. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**12. RESTRICTED FUEL SUPPLY LINE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special 5/16 fuel line adapter tool #6539 between disconnected fuel line and the fuel pump module.

Attach a fuel pressure test gauge to the T fitting on tool #6539.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**CAUTION:** Stop All Actuations.

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

---

**13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 14

---

**P0174-FUEL SYSTEM 2/1 LEAN (CONTINUED)**

**14. FUEL PUMP MODULE**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0175-FUEL SYSTEM 2/1 RICH

**P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive and a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
O2 SENSOR HEATER OPERATION EVAP PURGE SOLENOID OPERATION O2 SIGNAL CIRCUIT O2 RETURN CIRCUIT O2 SENSOR MAP SENSOR ECT SENSOR ENGINE MECHANICAL PROBLEM FUEL FILTER/PRESSURE REGULATOR (HIGH) PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)****2. CHECKING FUEL PRESSURE**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Turn the ignition off.

**CAUTION:** Stop All Actuators.

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**3. O2 SENSOR OPERATION**

Start the engine.

Allow the engine to reach normal operating temperature.

**Note:** If one of the O2 Sensors Signal or Return circuit is shorted to ground or voltage, all the other O2 Sensor voltage readings will be affected.

**Note:** After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.

With the scan tool, monitor the 2/1 O2 Sensor voltage reading.

**Is the voltage switching between 2.5 and 3.4 volts?**

**Yes** >> Go To 4

**No** >> Go To 9

---

**4. 2/1 O2 SENSOR HEATER OPERATION**

Turn the ignition off.

**Note:** Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.

Ignition on, engine not running.

With the scan tool, perform the 2/1 O2 Heater Test for each O2 Sensor.

With the scan tool, monitor the 2/1 O2 Sensor voltage while performing the Heater test for at least 2 minutes.

**Does the voltage stay above 4.5 volts for each Sensor?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)****5. MAP SENSOR OPERATION**

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**Note: If engine will not idle, maintain a constant RPM above idle.**

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1" of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note: Remove the vacuum gauge before continuing.**

---

**6. ECT SENSOR OPERATION**

**Note: For this test to be valid, the thermostat must be operating correctly.**

**Note: This test works best if performed on a cold engine (cold soak).**

Ignition on, engine not running.

With the scan tool, read the Engine Coolant Temperature Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temp value change should be a smooth transition from start up to normal operating temp 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. EVAP PURGE SOLENOID OPERATION**

Turn the ignition off.

Disconnect the hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 inches of vacuum to the Evap Purge Solenoid vacuum source port on the component side.

**Did the Evap Purge Solenoid hold vacuum?**

**Yes** >> Go To 8

**No** >> Replace the EVAP Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note: Connect the vacuum hoses before continuing.**

---

**P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)****8. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from restrictions.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 12

**9. 2/1 O2 SENSOR**

Ignition on, engine not running.

Disconnect the 2/1 O2 Sensor harness connector.

With the scan tool, monitor the 2/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K43) O2 Sensor 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts down to 2.5 volts with the jumper wire connected.**

**Did the O2 Sensor voltage drop from 5 volts to 2.5 volts when the jumper wire was installed?**

**Yes** >> Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**Note: Remove the jumper wire before continuing.**

## P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)

### 10. O2 SENSOR SIGNAL CIRCUIT

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Start the engine.

Measure the voltage on the (K43) O2 Sensor 2/1 Signal circuit in the O2 Sensor harness connector.

**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K43) O2 Sensor 2/1 Signal circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

### 11. (K902) O2 SENSOR UPSTREAM RETURN CIRCUIT

Engine still running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 12

**No** >> Check the (K902) O2 Upstream Return circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note:** Turn the ignition off before continuing.

**P0175-FUEL SYSTEM 2/1 RICH (CONTINUED)****12. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

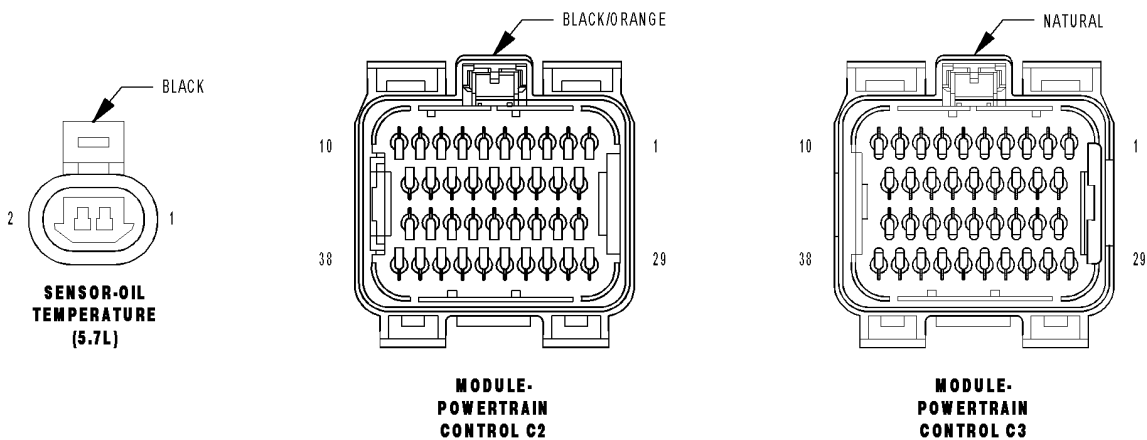

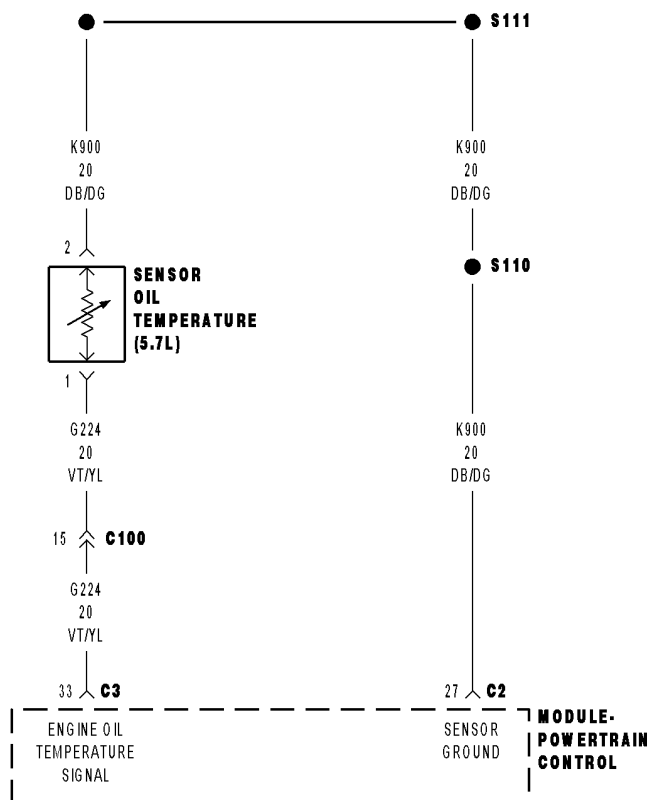

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0196—ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE

**P0196-ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)**

For the Engine System Schematic circuit diagram. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine off time is greater than 480 minutes. Ambient temperature is greater than 4 deg C (38 deg F).

- **Set Condition:**

The PCM detects the Engine Oil Temp value is incorrect by comparing it with the other engine inputs. Three good trips to turn off the MIL.

Possible Causes
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT OPEN
(K900) SENSOR GROUND CIRCUIT OPEN
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO GROUND
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND
ENGINE OIL TEMPERATURE SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0196-ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****2. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the Engine Oil Temp Sensor harness connector.

**Note: Visually inspect both the component and the PCM connectors. Look for damaged, partially broken wires, and backed out or corroded terminals.**

Ignition on, engine not running.

Measure the voltage on the (G224) Engine Oil Temp Signal circuit in the Engine Oil Temp Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (G224) Engine Oil Temp Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. ENGINE OIL TEMP SENSOR VOLTAGE ABOVE 4.6 VOLTS**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, read the Engine Oil Temp voltage.

**Is the voltage above 4.6 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

**P0196-ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****4. ENGINE OIL TEMP SENSOR**

Connect a jumper wire between the (G224) Engine Oil Temp Signal circuit and the (K900) Sensor ground circuit in the Engine Oil Temp Sensor harness connector.

With a scan tool, read the Engine Oil Temp voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the Engine Oil Temp Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (G224) Engine Oil Temp Signal circuit from the Engine Oil Temp Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (G224) Engine Oil Temp Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0196-ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****6. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the Engine Oil Temp Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (G224) Engine Oil Temp Signal circuit in the Engine Oil Temp Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G224) Engine Oil Temp Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0196-ENGINE OIL TEMPERATURE SENSOR CIRCUIT PERFORMANCE (CONTINUED)****8. (G224) ENGINE OIL TEMP SIGNAL SHORTED TO THE (K900) SENSOR GROUND**

Measure the resistance between the (G224) Engine Oil Temp Signal circuit and the (K900) Sensor ground circuit in the Engine Oil Temp Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (G224) Engine Oil Temp Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

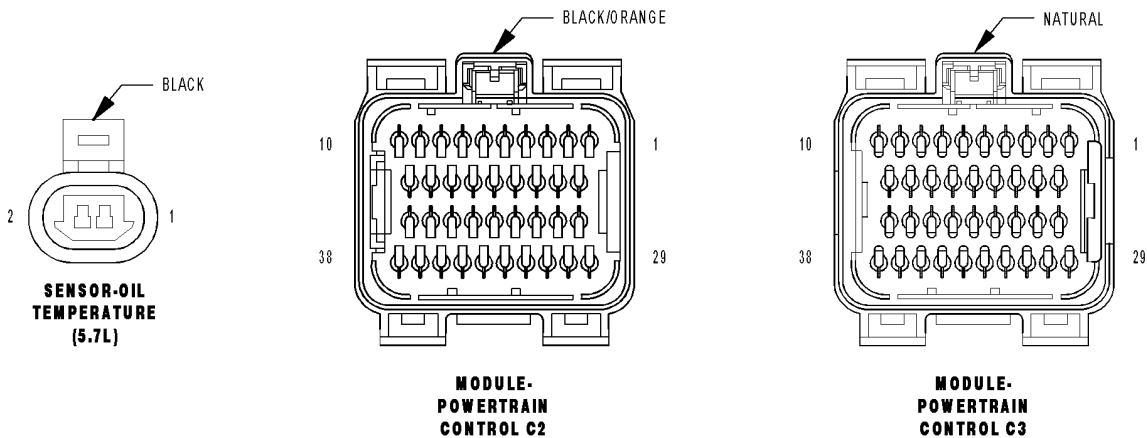

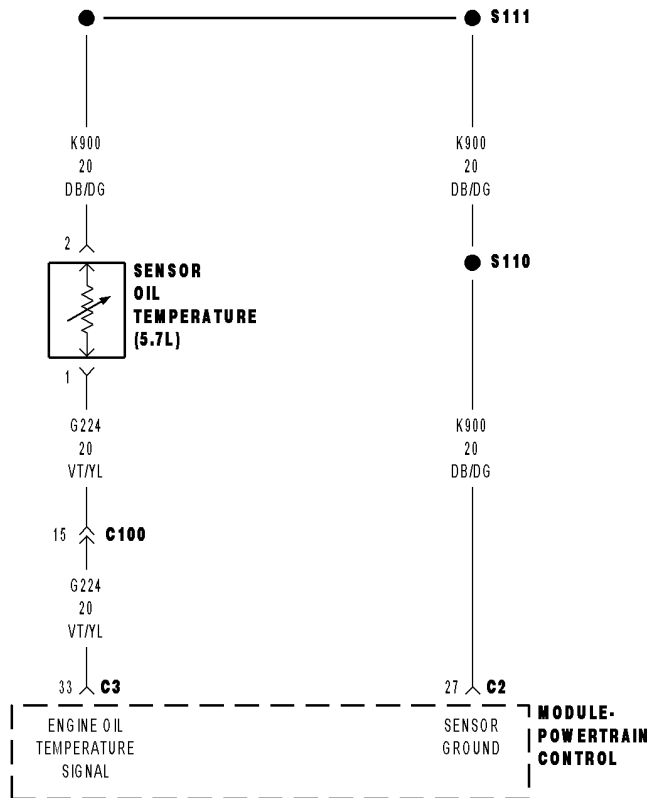

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0197-ENGINE OIL TEMPERATURE SENSOR CIRCUIT LOW

P0197-ENGINE OIL TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**  
The Engine Oil Temperature sensor circuit voltage at the PCM is less than the calibrated amount. One Trip Fault. Three good trips to clear the MIL.

Possible Causes
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO GROUND (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND ENGINE OIL TEMPERATURE SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

2. ENGINE OIL TEMPERATURE SENSOR

Turn the ignition off.  
Disconnect the Engine Oil Temp Sensor harness connector.  
Ignition on, engine not running.  
With a scan tool, read Engine Oil Temp voltage.

- Is the voltage above 1.0 volt?
- Yes**    >> Replace the Engine Oil Temp Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No**    >> Go To 3

**P0197-ENGINE OIL TEMPERATURE SENSOR CIRCUIT LOW (CONTINUED)****3. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between the (K900) Sensor ground circuit and the (G224) Engine Oil Temp Signal circuit in the Engine Oil Temp Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to between the (K900) Sensor ground circuit and the (G224) Engine Oil Temp Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED GROUND**

Measure the resistance between ground and the (G224) Engine Oil Temp Signal circuit in the Engine Oil Temp Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G224) Engine Oil Temp Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

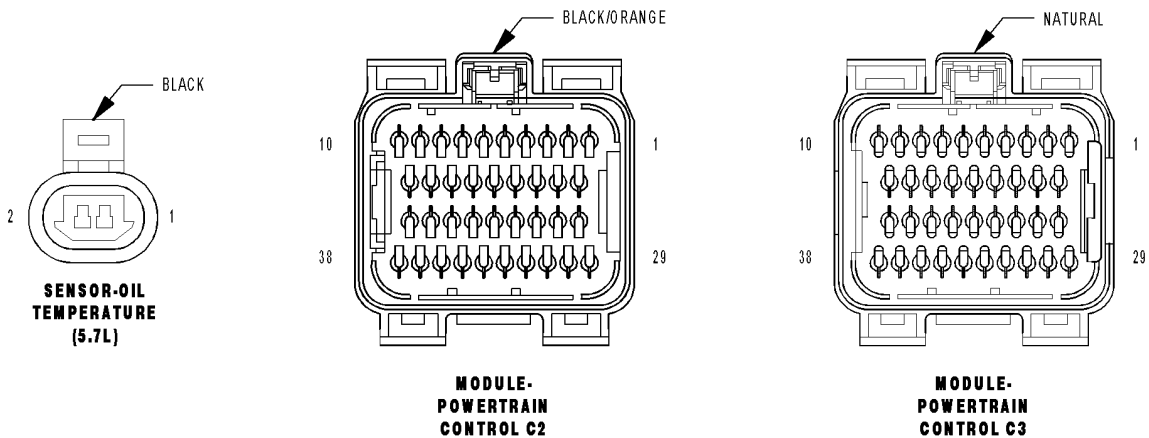

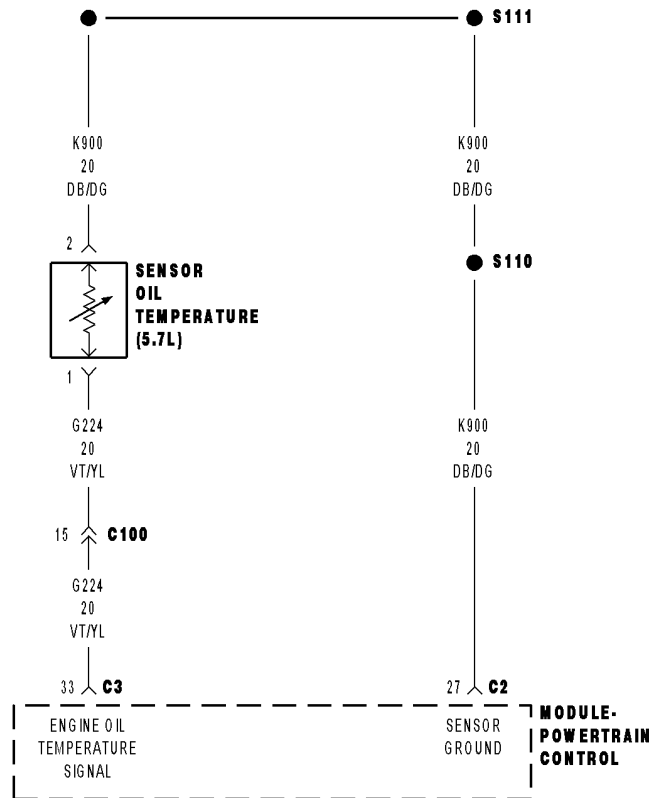

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0198-ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH**

**P0198-ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. Battery voltage greater than 10.4 volts.

- **Set Condition:**

The Engine Oil Temperature sensor circuit voltage at the PCM is greater than the calibrated amount. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(G224) ENGINE OIL TEMP SIGNAL CIRCUIT OPEN
(K900) SENSOR GROUND CIRCUIT OPEN
ENGINE OIL TEMPERATURE SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**IS the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0198-ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****2. ENGINE OIL TEMP SENSOR**

Turn the ignition off.

Disconnect the Engine Oil Temp Sensor harness connector.

Connect a jumper wire between the (G224) Engine Oil Temp Signal circuit and the (K900) Sensor ground circuit in the Engine Oil Temp Sensor harness connector.

Ignition on, engine not running.

With a scan tool, read Engine Oil Temp voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the Engine Oil Temp Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (G224) Engine Oil Temp Signal circuit in the Engine Oil Temp Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (G224) Engine Oil Temp Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0198-ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****4. (G224) ENGINE OIL TEMP SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (G224) Engine Oil Temp Signal circuit from the Engine Oil Temp Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (G224) Engine Oil Temp Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the Engine Oil Temp Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0198-ENGINE OIL TEMPERATURE SENSOR CIRCUIT HIGH (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

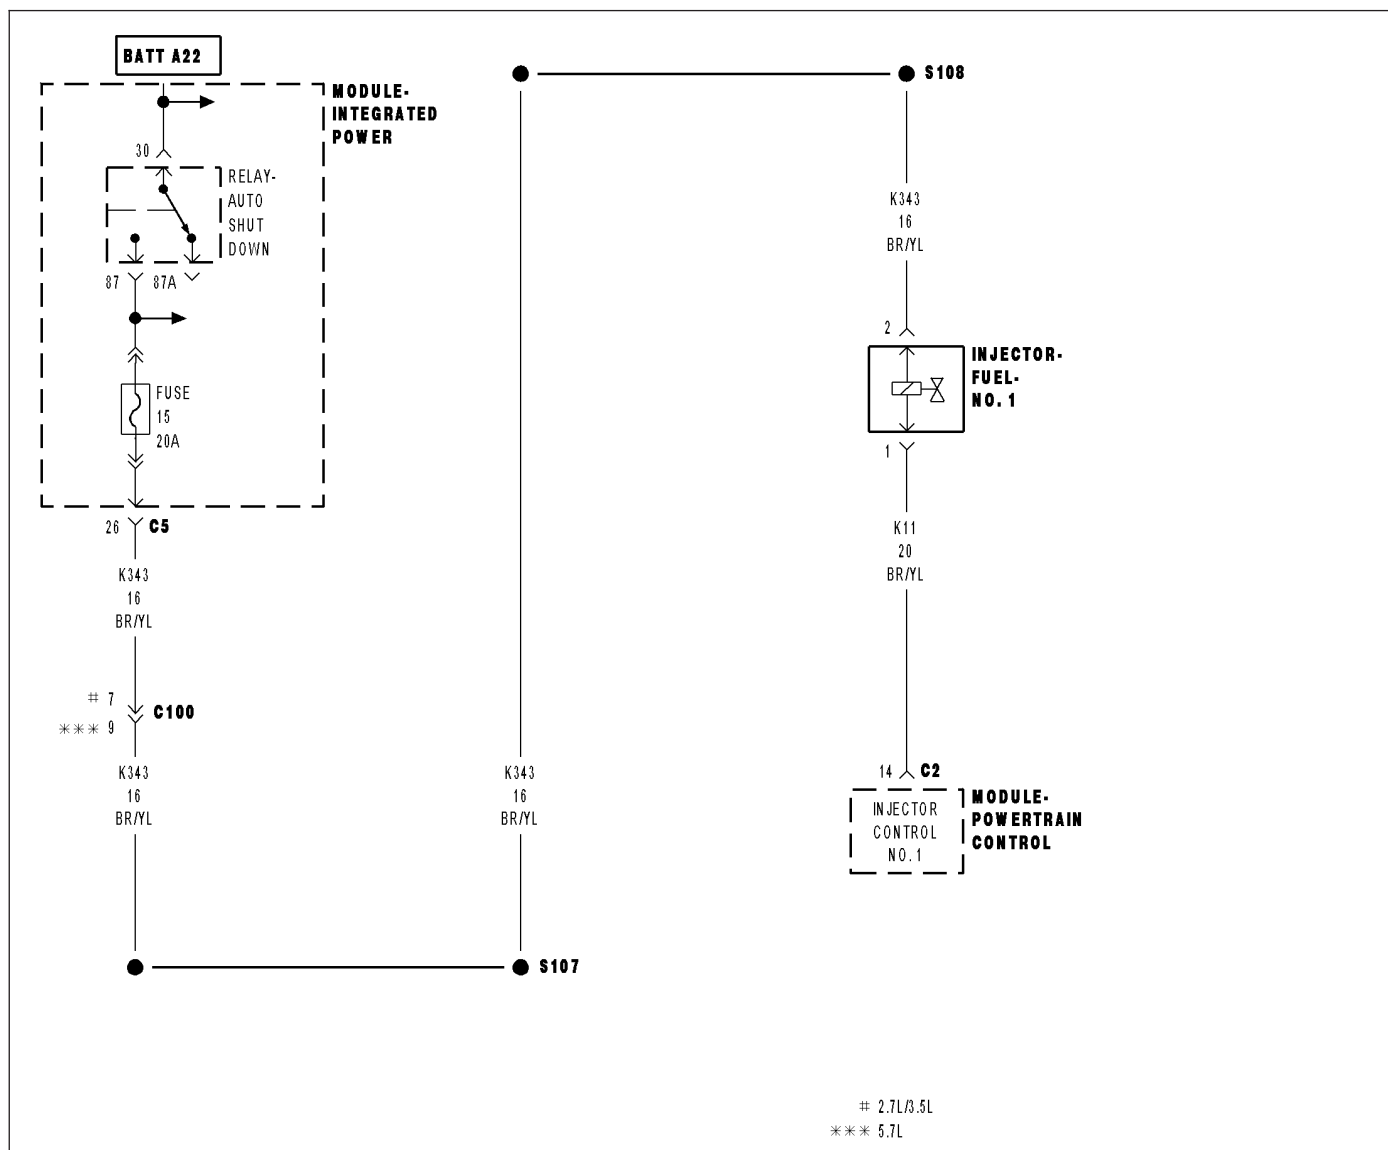

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0201-FUEL INJECTOR 1 CIRCUIT

P0201-FUEL INJECTOR 1 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K11) INJECTOR CONTROL NO.1 CIRCUIT OPEN (K11) INJECTOR CONTROL NO.1 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0201-FUEL INJECTOR 1 CIRCUIT (CONTINUED)

### 2. (K33) ASD RELAY OUTPUT 2 CIRCUIT

Turn the ignition off.

Disconnect the No.1 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K11) Injector Control No.1 circuit.

With the scan tool, actuate the Fuel Injector.

**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0201-FUEL INJECTOR 1 CIRCUIT (CONTINUED)****4. (K11) INJECTOR CONTROL NO.1 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K11) Injector Control No.1 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K11) Injector Control No.1 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K11) INJECTOR CONTROL NO.1 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K11) Injector Control No.1 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K11) Injector Control No.1 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0201-FUEL INJECTOR 1 CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

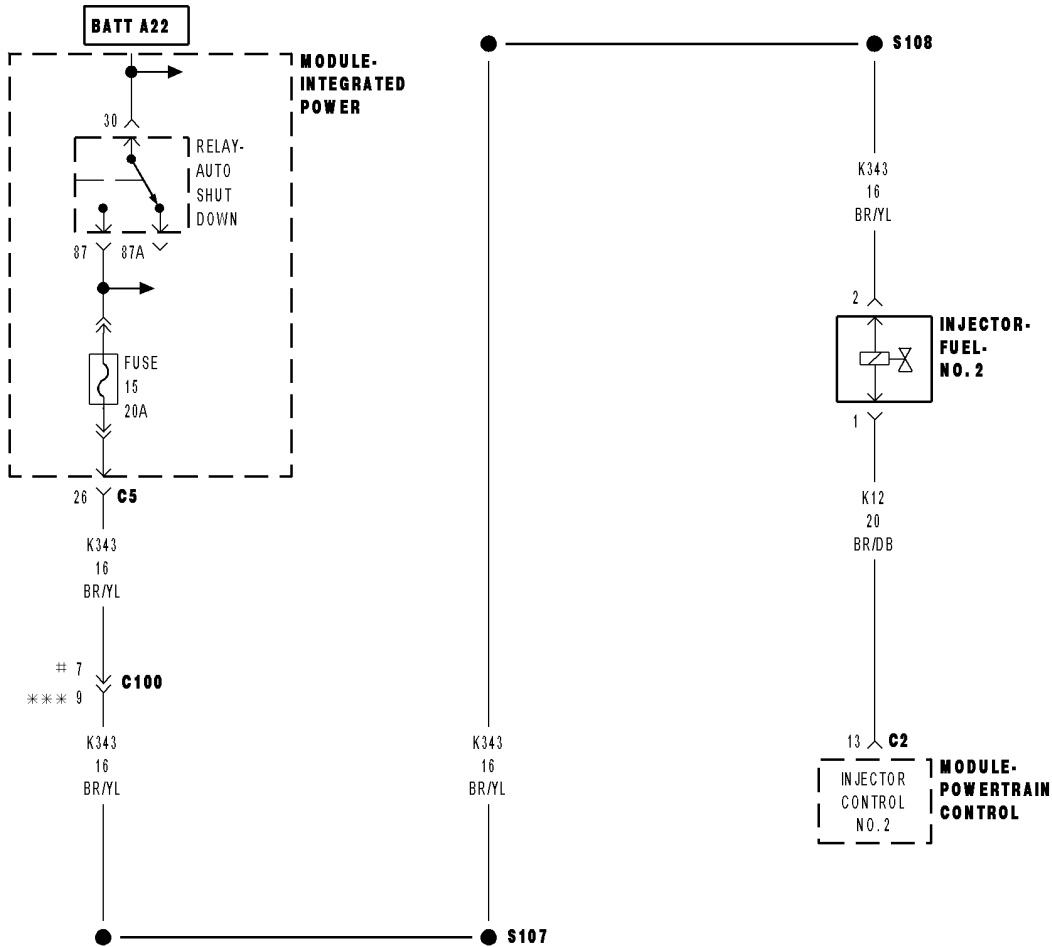

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0202-FUEL INJECTOR 2 CIRCUIT**

# 2.7L/3.5L  
\*\*\* 5.7L

**P0202-FUEL INJECTOR 2 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K12) INJECTOR CONTROL NO.2 CIRCUIT OPEN (K12) INJECTOR CONTROL NO.2 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0202-FUEL INJECTOR 2 CIRCUIT (CONTINUED)****2. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.2 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.2 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. FUEL INJECTOR**

Using a 12-volt test light connected to 12-volts, backprobe the (K12) Injector Control No.2 circuit.

With the scan tool, actuate the No.2 Fuel Injector.

**What is the state of the test light during the actuation?****Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0202-FUEL INJECTOR 2 CIRCUIT (CONTINUED)****4. (K12) INJECTOR CONTROL NO.2 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K12) Injector Control No.2 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K12) Injector Control No.2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K12) INJECTOR CONTROL NO.2 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K12) Injector Control No.2 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K12) Injector Control No.2 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0202-FUEL INJECTOR 2 CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

# P0203-FUEL INJECTOR 3 CIRCUIT

P0203-FUEL INJECTOR 3 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K13) INJECTOR CONTROL NO.3 CIRCUIT OPEN (K13) INJECTOR CONTROL NO.3 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0203-FUEL INJECTOR 3 CIRCUIT (CONTINUED)****2. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.3 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2circuit in the No.3 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. FUEL INJECTOR**

Using a 12-volt test light connected to 12-volts, backprobe the (K13) Injector Control No.3 circuit.

With the scan tool, actuate the No.3 Fuel Injector.

**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**4. (K13) INJECTOR CONTROL NO.3 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K13) Injector Control No.3 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K13) Injector Control No.3 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0203-FUEL INJECTOR 3 CIRCUIT (CONTINUED)****5. (K13) INJECTOR CONTROL NO.3 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K13) Injector Control No.3 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K13) Injector Control No.3 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

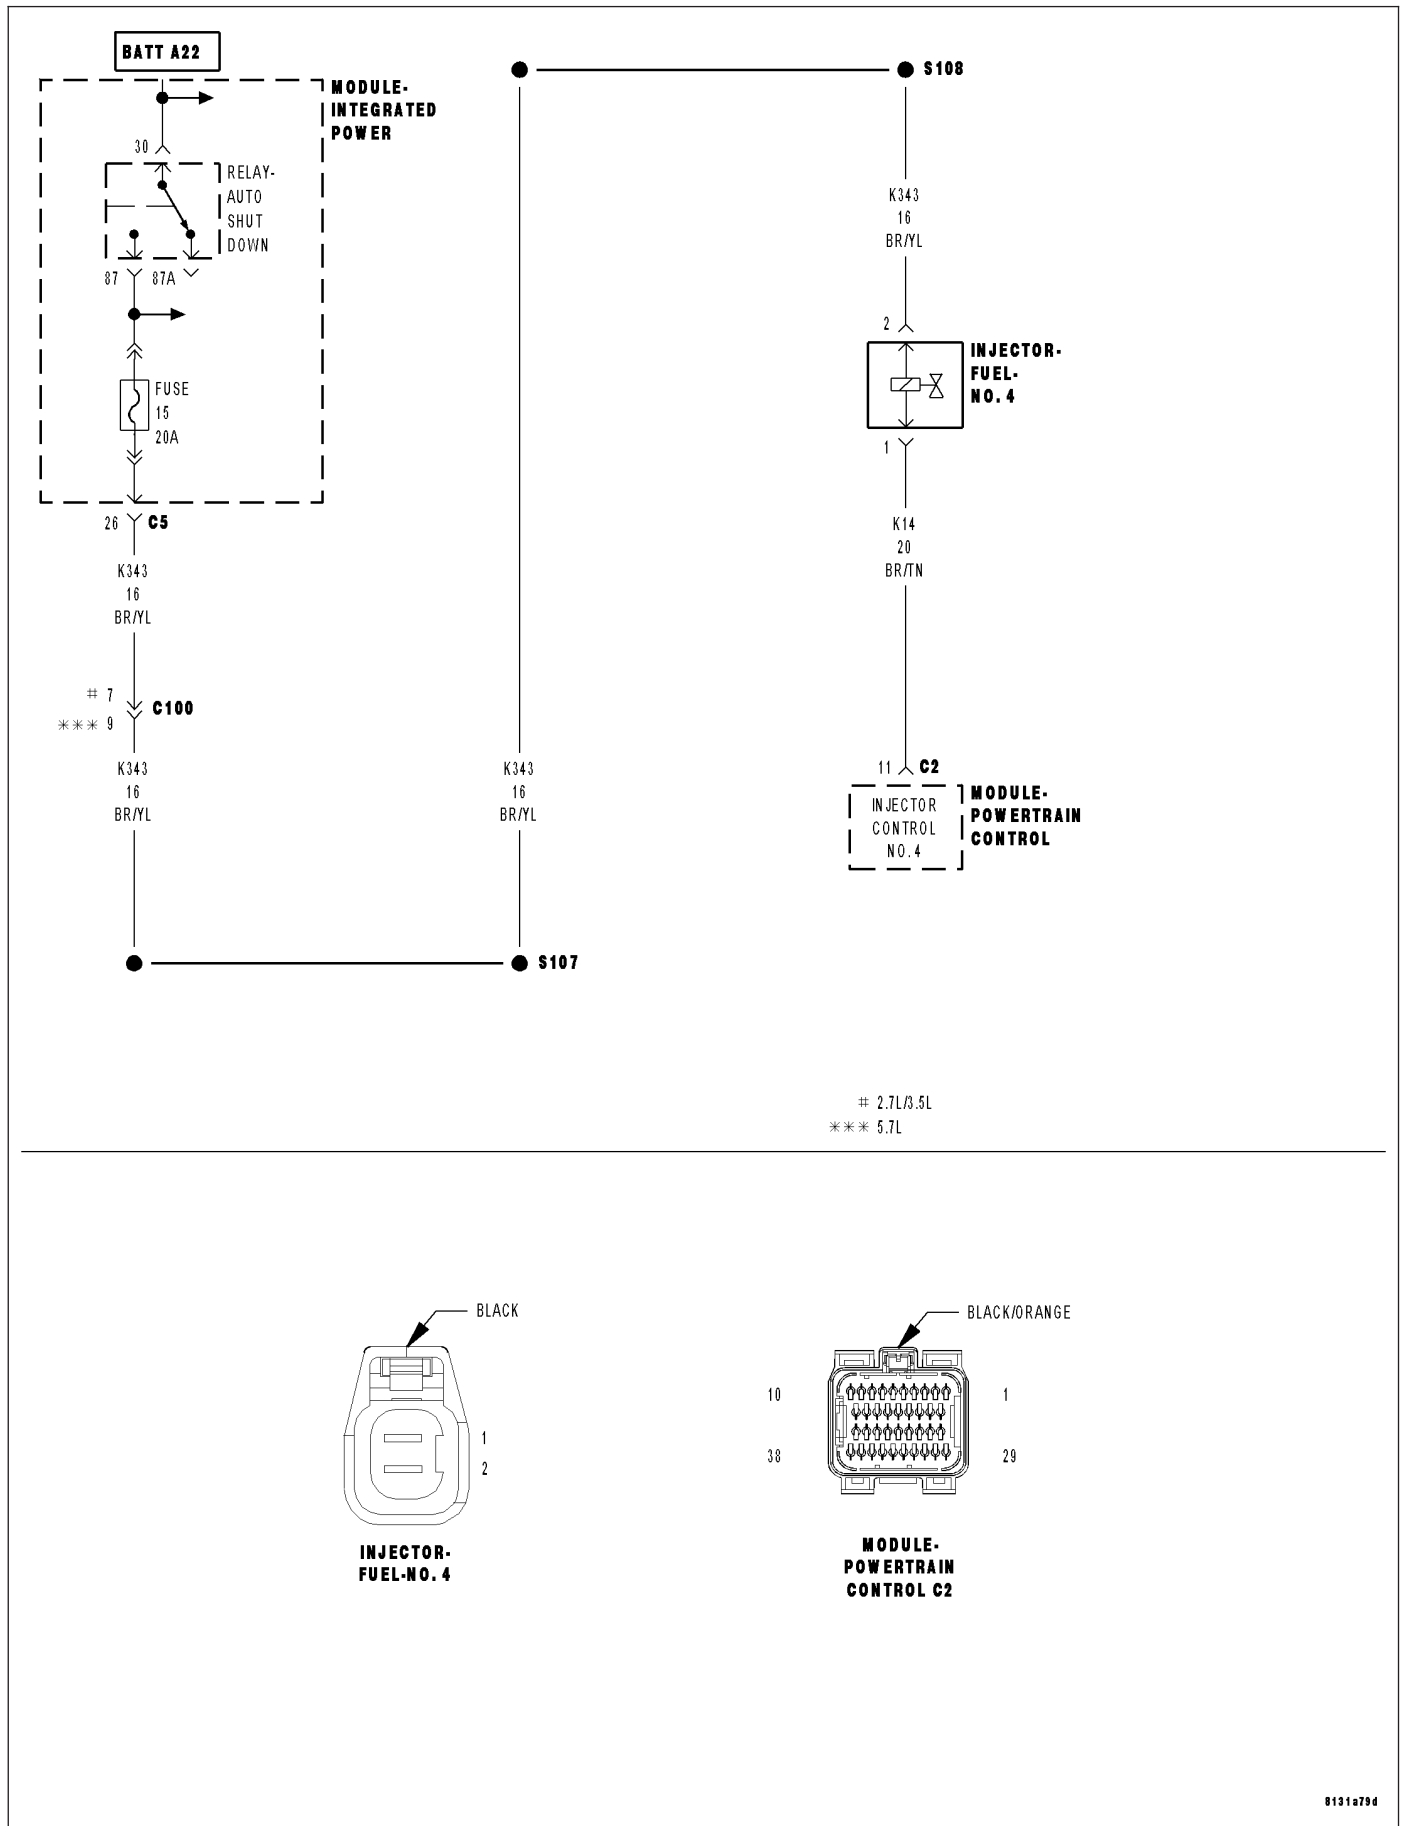

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0204-FUEL INJECTOR 4 CIRCUIT

P0204-FUEL INJECTOR 4 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K14) INJECTOR CONTROL NO.4 CIRCUIT OPEN (K14) INJECTOR CONTROL NO.4 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0204-FUEL INJECTOR 4 CIRCUIT (CONTINUED)

### 2. (K343) ASD RELAY OUTPUT 2 CIRCUIT

Turn the ignition off.

Disconnect the No.4 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.4 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K14) Injector Control No.4 circuit.

With the scan tool, actuate the No.4 Fuel Injector.

**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

### 4. (K14) INJECTOR CONTROL NO.4 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K14) Injector Control No.4 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K14) Injector Control No.4 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0204-FUEL INJECTOR 4 CIRCUIT (CONTINUED)****5. (K14) INJECTOR CONTROL NO.4 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K14) Injector Control No.4 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K14) Injector Control No.4 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

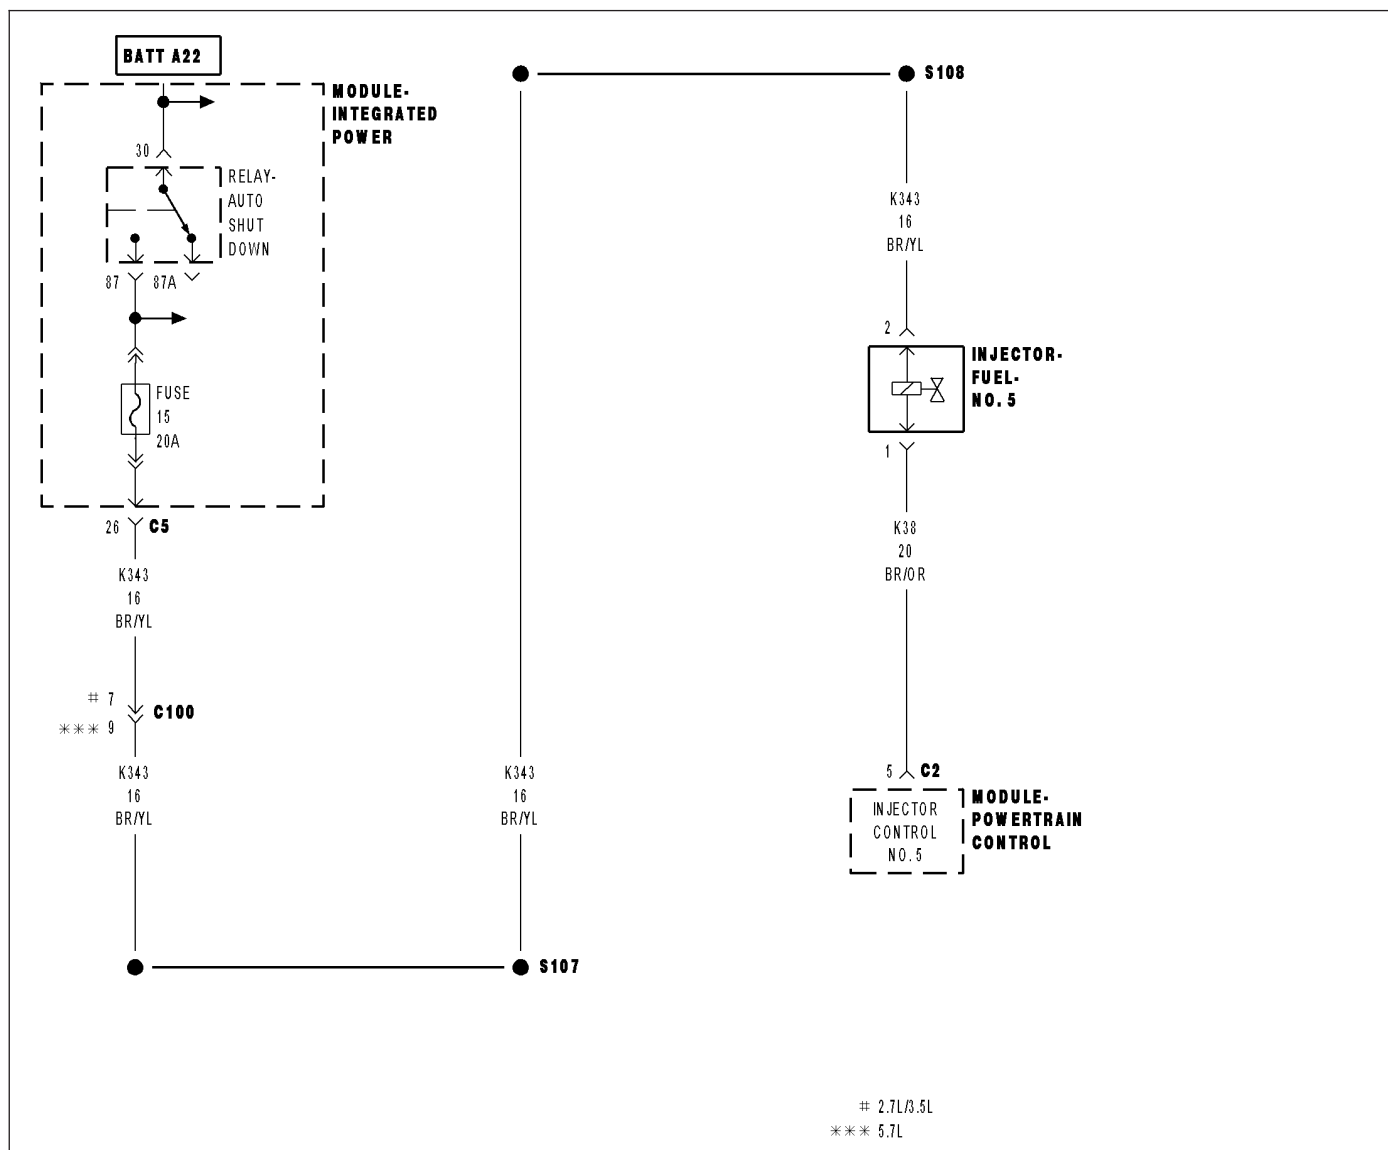

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0205-FUEL INJECTOR 5 CIRCUIT

P0205-FUEL INJECTOR 5 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K38) INJECTOR CONTROL NO.5 CIRCUIT OPEN (K38) INJECTOR CONTROL NO.5 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0205-FUEL INJECTOR 5 CIRCUIT (CONTINUED)

### 2. (K343) ASD RELAY OUTPUT 2 CIRCUIT

Turn the ignition off.

Disconnect the No.5 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.5 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K38) Injector Control No.5 circuit.

With the scan tool, actuate the No.5 Fuel Injector.

**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0205-FUEL INJECTOR 5 CIRCUIT (CONTINUED)****4. (K38) INJECTOR CONTROL NO.5 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K38) Injector Control No.5 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K38) Injector Control No.5 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K38) INJECTOR CONTROL NO.5 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K38) Injector Control No.5 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K38) Injector Control No.5 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0205-FUEL INJECTOR 5 CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

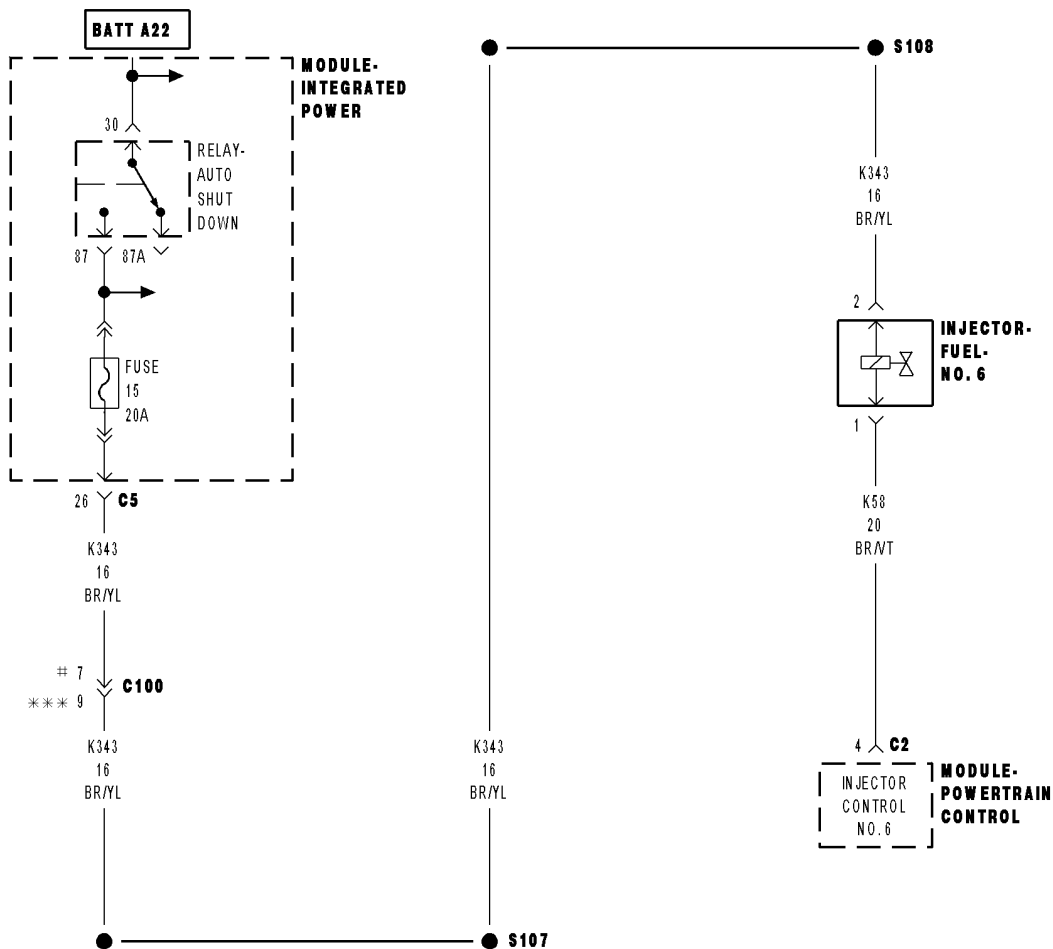

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0206-FUEL INJECTOR 6 CIRCUIT

# 2.7L/3.5L  
\*\*\* 5.7L

**P0206-FUEL INJECTOR 6 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.

- **Set Condition:**

No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K58) INJECTOR CONTROL NO.6 CIRCUIT OPEN (K58) INJECTOR CONTROL NO.6 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0206-FUEL INJECTOR 6 CIRCUIT (CONTINUED)****2. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.6 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.6 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. FUEL INJECTOR**

Using a 12-volt test light connected to 12-volts, backprobe the (K58) Injector Control No.6 circuit.

With the scan tool, actuate the No.6 Fuel Injector.

**What is the state of the test light during the actuation?****Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0206-FUEL INJECTOR 6 CIRCUIT (CONTINUED)****4. (K58) INJECTOR CONTROL NO.6 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K58) Injector Control No.6 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K58) Injector Control No.6 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K58) INJECTOR CONTROL NO.6 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K58) Injector Control No.6 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K58) Injector Control No.6 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0206-FUEL INJECTOR 6 CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

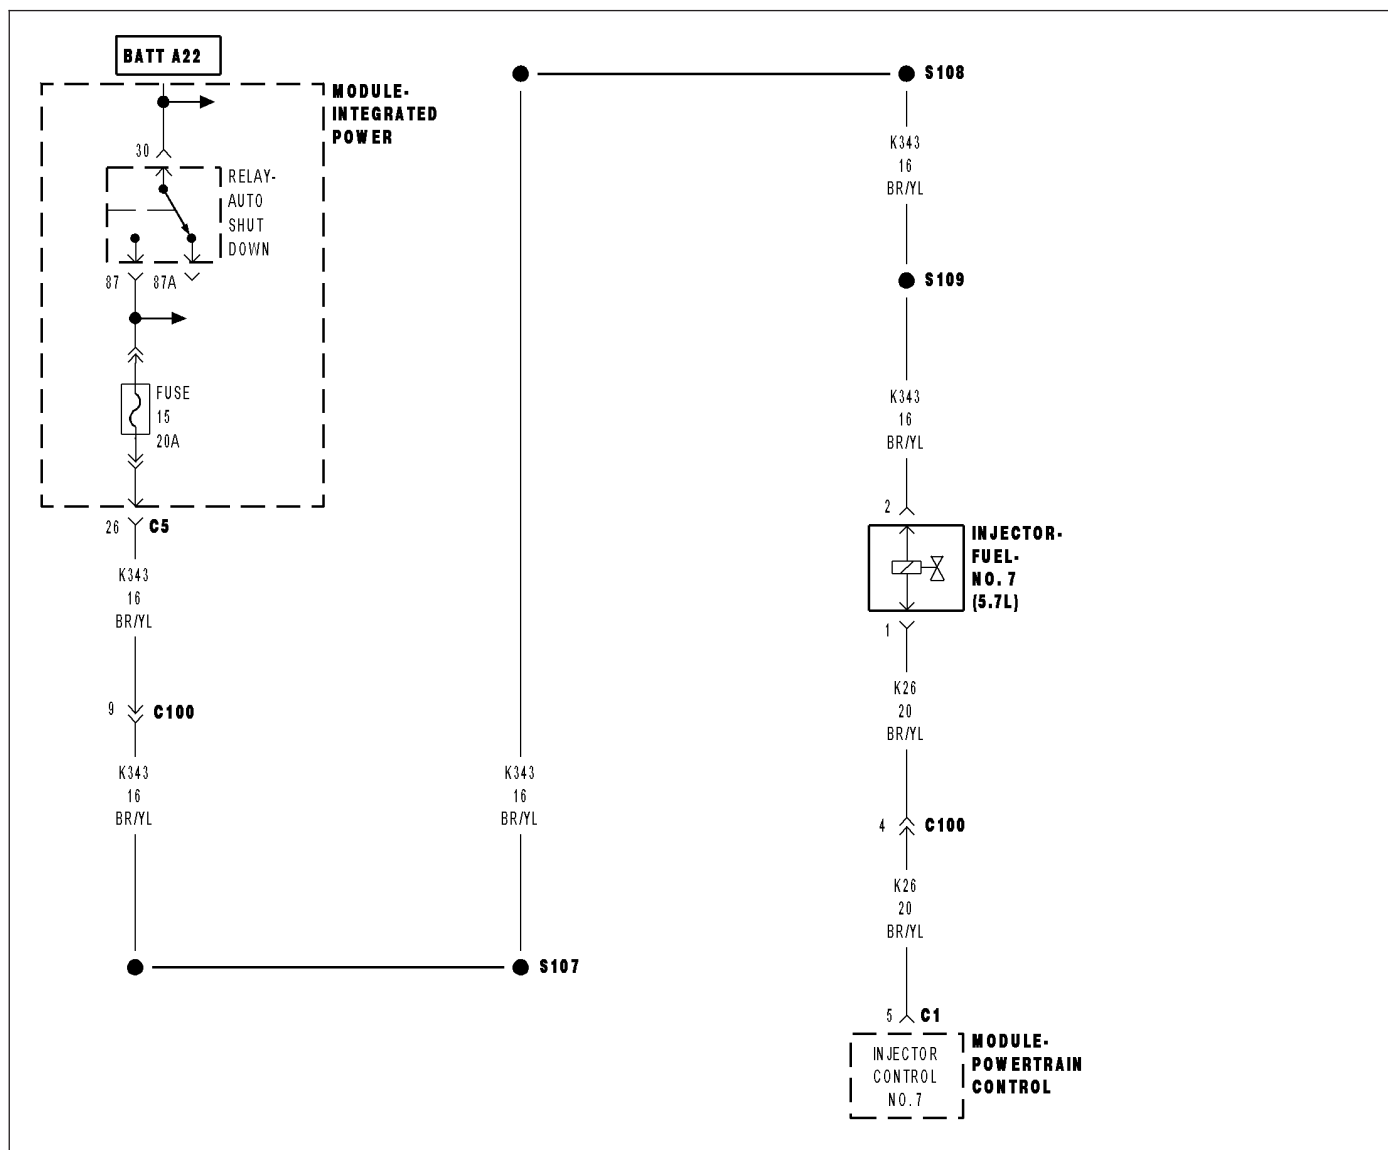

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0207-FUEL INJECTOR 7 CIRCUIT

P0207-FUEL INJECTOR 7 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K26) INJECTOR CONTROL NO.7 CIRCUIT OPEN (K26) INJECTOR CONTROL NO.7 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0207-FUEL INJECTOR 7 CIRCUIT (CONTINUED)

### 2. (K343) ASD RELAY OUTPUT 2 CIRCUIT

Turn the ignition off.

Disconnect the No.7 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.7 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K26) Injector Control No.7 circuit.

With the scan tool, actuate the No.7 Fuel Injector.

**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0207-FUEL INJECTOR 7 CIRCUIT (CONTINUED)****4. (K26) INJECTOR CONTROL NO.7 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K26) Injector Control No.7 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K26) Injector Control No.7 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K26) INJECTOR CONTROL NO.7 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K26) Injector Control No.7 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K26) Injector Control No.7 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0207-FUEL INJECTOR 7 CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

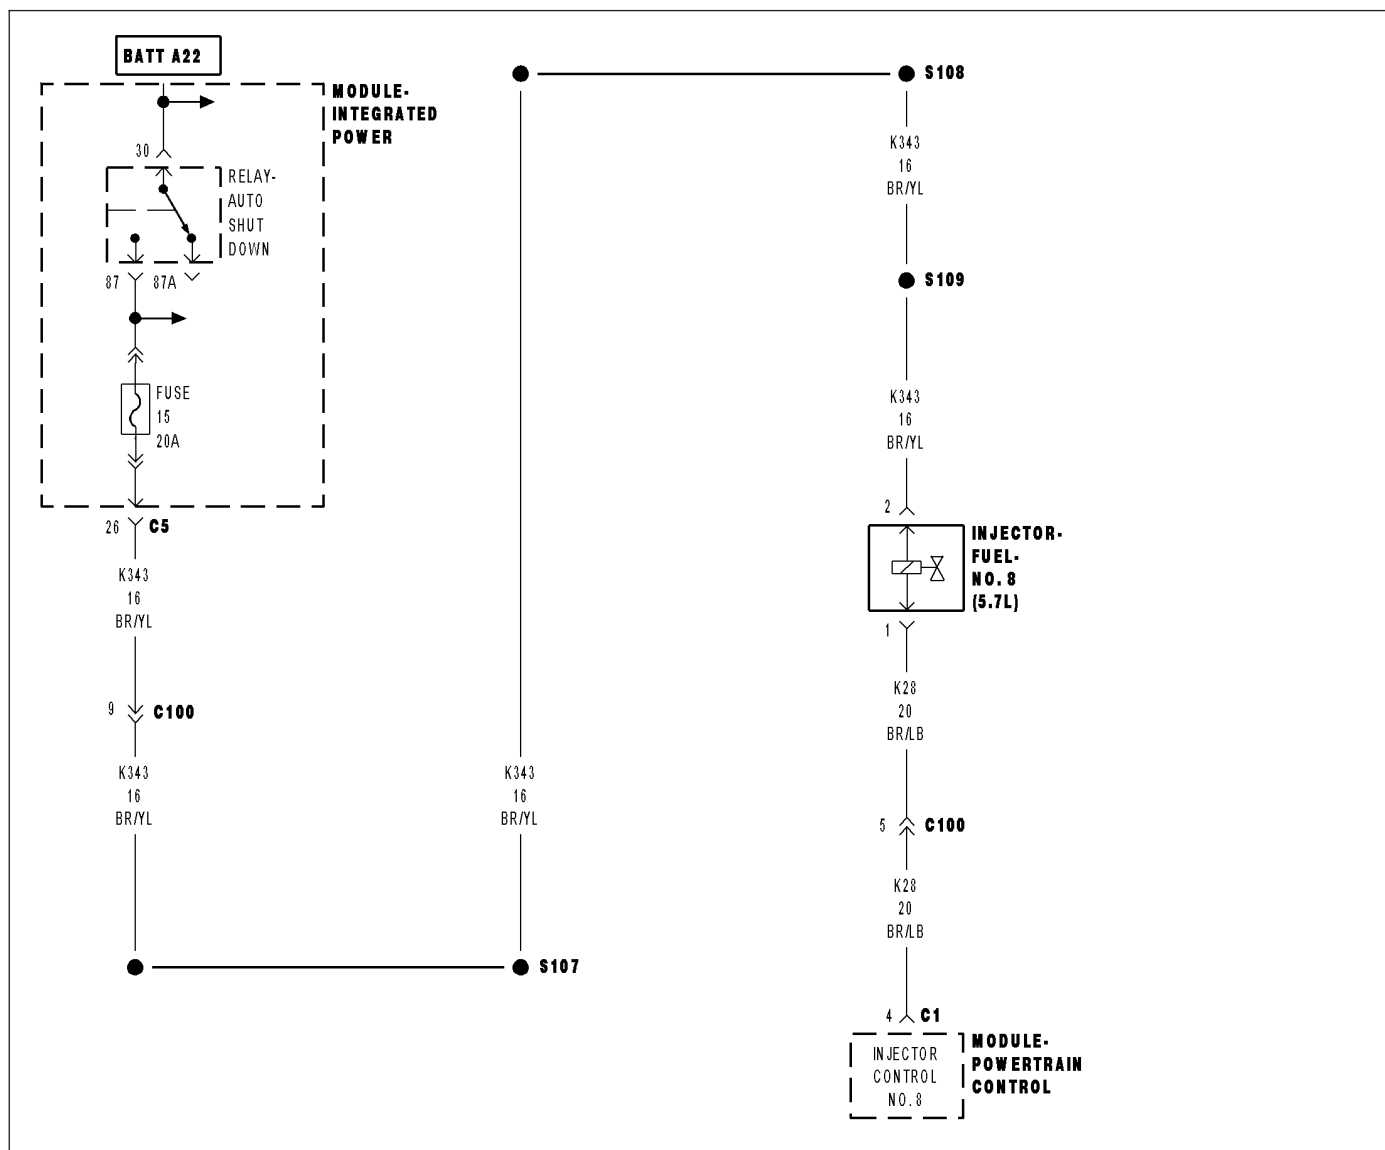

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0208-FUEL INJECTOR 8 CIRCUIT

**P0208-FUEL INJECTOR 8 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**  
No inductive spike is detected after injector turn off.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K28) INJECTOR CONTROL NO.8 CIRCUIT OPEN (K28) INJECTOR CONTROL NO.8 CIRCUIT SHORTED TO GROUND FUEL INJECTOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTC.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0208-FUEL INJECTOR 8 CIRCUIT (CONTINUED)****2. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.8 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (K343) ASD Relay Output 2 circuit in the No.8 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. FUEL INJECTOR**

Using a 12-volt test light connected to 12-volts, backprobe the (K28) Injector Control No.8 circuit.

With the scan tool, actuate the No.8 Fuel Injector.

**What is the state of the test light during the actuation?****Brightly Blinking.**

Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

**P0208-FUEL INJECTOR 8 CIRCUIT (CONTINUED)****4. (K28) INJECTOR CONTROL NO.8 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K28) Injector Control No.8 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K28) Injector Control No.8 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**5. (K28) INJECTOR CONTROL NO.8 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K28) Injector Control No.8 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K28) Injector Control No.8 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0208-FUEL INJECTOR 8 CIRCUIT (CONTINUED)****6. PCM**

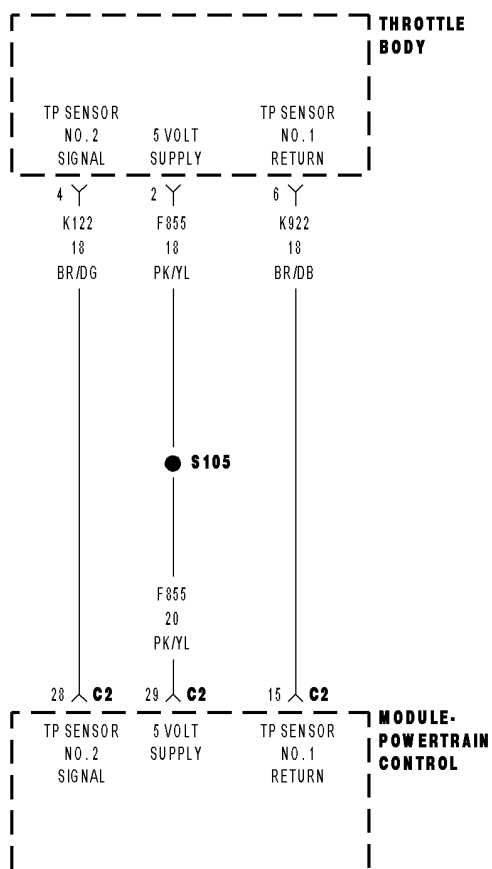

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

## P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE

**THROTTLE  
BODY**

**MODULE-  
POWERTRAIN  
CONTROL C2**

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and No MAP Sensor DTCs set.

- **Set Condition:**

TP Sensor signals do not correlate to the MAP Sensor signal. One Trip Fault. ETC light will illuminate. P2135 should set with this code also.

Possible Causes
(K122) TP SENSOR NO.2 SIGNAL CIRCUIT OR (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
RESISTANCE IN THE (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT
(K122) TP SENSOR NO.2 SIGNAL CIRCUIT OR (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND
RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT
(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO (K122) TP SENSOR NO.2 SIGNAL CIRCUIT
THROTTLE POSITION SENSOR/THROTTLE BODY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Diagnose any other TP Sensor DTC(s) before continuing.

**Note:** The throttle plate and linkage should be free from binding and carbon build up.

**Note:** Make sure the throttle plate is at the idle position.

Ignition on, engine not running.

**Note:** Inspect the engine for vacuum leaks.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 11

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****2. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT OR (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (K122) TP No.2 Signal circuit in the Throttle Body harness connector.

Measure the voltage on the (K22) TP No.1 Signal circuit in the Throttle Body harness connector.

**Is the voltage above 5.2 volts for each reading?**

**Yes** >> Repair the short to battery voltage in the (K122) TP Sensor No.2 Signal circuit or the (K22) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****3. THROTTLE POSITION SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With the scan tool, monitor the TP Sensor No.1 and No.2 voltage.

Connect a jumper wire between the (K922) Sensor Return circuit and the (K22) TP Sensor No.1 Signal circuit.

**Note: TP Sensor No.1 voltage should change from approximately 4.7 volts to 0.3 of a volt.**

For TP Sensor No.2, connect a jumper wire between (F855) 5-volt supply circuit and the (K122) TP Sensor No.2 Signal circuit.

**Note: TP Sensor No.2 voltage should change from approximately 0 volts to 5.0 volts.**

**Is the voltage reading within the listed specification with the jumper wire installed?**

**Yes** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool, select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note: Remove the jumper wire before continuing.**

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****4. EXCESSIVE RESISTANCE IN THE (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815. Measure the resistance of the (K122) TP Sensor No.2 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (K22) TP Sensor No.1 or (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****5. (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K122) TP Sensor No.2 Signal circuit at the Throttle Body harness connector.

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms for each circuit?**

**Yes** >> Go To 6

**No** >> Repair the short to ground in the (K122), (K22) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)

### 6. EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 7. (F855) 5-VOLT SUPPLY SHORTED TO GROUND

Measure the resistance between ground and the (F855) 5-volt Supply circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****8. EXCESSIVE RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. (K22) TP SENSOR NO.1 SIGNAL SHORTED TO (K122) TP SENSOR NO.2 SIGNAL**

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (K122) TP Sensor No.2 Signal circuit at the Throttle Body harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K122) TP Sensor No.2 Signal circuit and the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0221-THROTTLE POSITION SENSOR 2 PERFORMANCE (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**11. THROTTLE FOLLOWER TEST**

Ignition on, engine not running.

With the scan tool, perform the Throttle Follower Test and monitor the TP Sensor No.1 or No.2 voltage.

Slowly press the throttle pedal down.

The voltage for TP Sensor No.1 should start at approximately 0.3 of a volt and increase to above 4.3 volts.

The voltage for TP Sensor No.2 should start at approximately 4.3 volts and decrease to approximately 0.3 of a volt.

**Is the voltage within the range of the listed specification for the appropriate Sensor?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, using a scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW**

## P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete Engine wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
Throttle Position Sensor voltage at the PCM is less than 0.16 of a volt for 0.7 of a second. One Trip Fault.  
Three good trips to turn off the MIL.

Possible Causes
(F855) 5-VOLT SUPPLY CIRCUIT OPEN (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K922) SENSOR RETURN CIRCUIT THROTTLE POSITION SENSOR/THROTTLE BODY THROTTLE PLATE JAMMED AGAINST THE MAXIMUM STOP PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. TP SENSOR NO.2 BELOW 0.35 OF A VOLT

**Note:** If a 5-Volt supply DTC has also set, diagnose the 5-Volt DTC before continuing.

**Note:** Make sure the throttle moves freely and does not hang up at Wide Open Throttle, by performing the Throttle Follower Test

**Note:** If P2101 is also set, then make sure that the blade moves freely and does not hang up near Wide Open Throttle before trying to repair P0222.

Ignition on, engine not running.

With the scan tool, read the TP Sensor voltage.

**Is the voltage below 0.35 of a volt?**

- Yes**    >> Go To 2  
**No**     >> Go To 11

**P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****2. P0122 ALSO SET**

**Was the P0122-TP SENSOR NO.1 VOLTAGE LOW DTC set along with the P0222?**

**Yes** >> Go To 3

**No** >> Go To 4

**3. (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 4

**No** >> Go To 8

## P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)

### 4. THROTTLE POSITION SENSOR

Connect a jumper wire between the (F855) 5-volt Supply circuit and the (K122) TP Sensor No.2 Signal circuit in the Throttle Body harness connector.

With the scan tool, monitor the TP Sensor No.2 voltage.

**Is the voltage between 4.8 and 5.2 volts with the jumper wire installed?**

**Yes** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, with a scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

### 5. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K122) TP Sensor No.2 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****6. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K122) TP Sensor No.2 Signal circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K122) TP Sensor No.2 Signal.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO (K922) SENSOR RETURN CIRCUIT**

Measure the resistance between the (K122) TP Sensor No.2 Signal circuit and the (K922) TP Sensor Return circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K922) Sensor Return circuit and the (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****8. (F855) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (F855) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F855) 5-volt Supply circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0222-THROTTLE POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**11. THROTTLE FOLLOWER TEST**

Ignition on, engine not running.

With the scan tool, perform the Throttle Follower Test.

Monitor the TP Sensor No.2 voltage while slowly pressing the Throttle pedal down.

**Is there a smooth voltage change from high to low?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

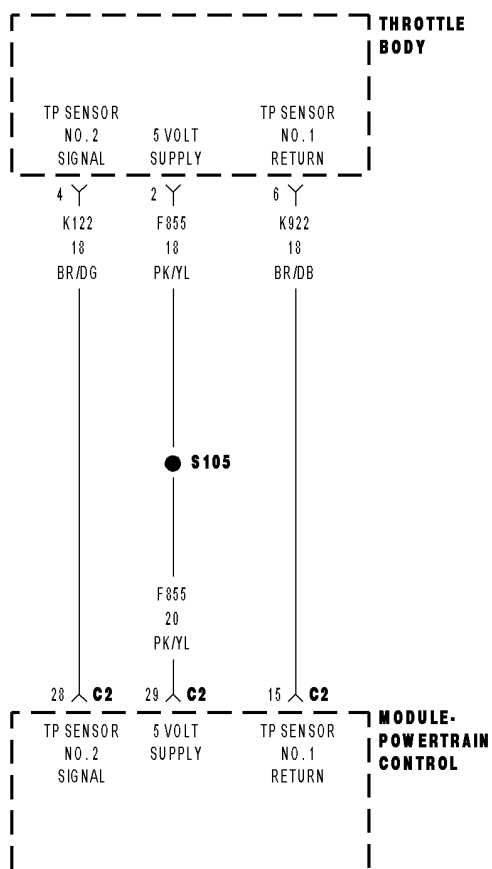

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, with a scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0223-THROTTLE POSITION SENSOR 2 CIRCUIT HIGH

**P0223-THROTTLE POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
Throttle Position Sensor No.2 Signal circuit voltage is greater than 4.9 volts for 25 ms. One Trip Fault. ETC light will illuminate.

Possible Causes
(K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO (F855) 5-VOLT SUPPLY CIRCUIT (K922) SENSOR RETURN CIRCUIT OPEN THROTTLE POSITION SENSOR/THROTTLE BODY PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** If a 5-Volt supply DTC has also set, diagnose the 5-Volt DTC before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**    >> Go To 7

**P0223-THROTTLE POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)****2. THROTTLE POSITION SENSOR**

Turn the ignition off.

Disconnect the Throttle Body Assembly harness connector.

Ignition on, engine not running.

With the scan tool monitor the TP Sensor No.2 voltage.

**Is the voltage below 0.5 volt?**

**Yes** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, with the scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K122) TP Sensor No.2 Signal circuit at the Throttle Body harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0223-THROTTLE POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)****4. (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO (F855) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit at the Throttle Body harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K922) SENSOR RETURN CIRCUIT OPEN**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0223-THROTTLE POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. THROTTLE FOLLOWER TEST**

With the scan tool, perform the Throttle Follower Test.

Monitor the TP Sensor No.2 voltage while slowly pressing the Throttle pedal down.

**Is there a smooth voltage change from high to low?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, with the scan tool select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0300- MULTIPLE CYLINDER 1 MISFIRE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.5% misfire rate is measured during two trips. Three good trips to clear the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT INJECTOR CONTROL CIRCUIT COIL CONTROL CIRCUIT IGNITION WIRE SPARK PLUG IGNITION COIL FUEL PUMP INLET STRAINER PLUGGED RESTRICTED FUEL SUPPLY LINE FUEL PUMP MODULE FUEL PRESSURE LEAK DOWN FUEL INJECTOR ENGINE MECHANICAL PROBLEM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

**Note:** Check for any TSB's that apply to a Misfire condition. Review the vehicle repair history for any misfire condition repairs that have been performed.

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen and identify the cylinders that have a misfire present.

**Is there a misfire present at this time?**

**Yes** >>

**Note:** Repeat the below checks for each cylinder that is indicating a misfire present. Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils and the Fuel Injector harness connectors.

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Disconnect the Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****4. IGNITION SYSTEM OPERATION**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information.

Turn the ignition off.

Connect the Ignition Coil harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark present?**

**Yes**     >> Go To 5

**No**      >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

---

**5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes**     >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No**      >> Go To 6

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair/replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

Does the gauge fall below the listed specification?

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the Fuel Injector harness connector.

Ignition on, engine not running.

**Note: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the Injector Control circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

---

**11. INJECTOR CONTROL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the Injector Control circuit for an open, short to ground, and short to voltage.

**Was a problem found with the Injector Control circuit?**

**Yes** >> Repair the excessive resistance or short in the Injector Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**14. IGNITION WIRE**

**Note:** If the vehicle being tested does not have an ignition wire answer YES to this test and continue.

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**15. IGNITION COIL**

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the Coil Control circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

---

**P0300- MULTIPLE CYLINDER 1 MISFIRE (CONTINUED)****16. COIL CONTROL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the Coil Control circuit for an open, short to ground, and short to voltage.

**Was a problem found with the Coil Control circuit?**

**Yes** >> Repair the Coil Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**17. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

P0301-CYLINDER 1 MISFIRE (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
Any time the engine is running, and the adaptive numerator has been successfully updated.
- Set Condition:**  
When more than 1.5% misfire rate is measured during two trips. Three good trips to clear the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K11) INJECTOR CONTROL NO.1 CIRCUIT (K19) COIL CONTROL NO.1 CIRCUIT IGNITION WIRE SPARK PLUG IGNITION COIL FUEL PUMP INLET STRAINER PLUGGED RESTRICTED FUEL SUPPLY LINE FUEL PUMP MODULE FUEL PRESSURE LEAK DOWN FUEL INJECTOR ENGINE MECHANICAL PROBLEM PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute on the scan tool.

- Is there a misfire presen at this time?
- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

## P0301-CYLINDER 1 MISFIRE (CONTINUED)

### 3. (K343) ASD RELAY OUTPUT 2 CIRCUIT

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils and the Fuel Injector harness connectors.

Turn the ignition off.

Disconnect the Ignition Coil No.1 harness connector.

Disconnect the Fuel Injector No.1 harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

#### Does the test light illuminate brightly?

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****4. IGNITION SYSTEM OPERATION**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information.

Turn the ignition off.

Connect the Ignition Coil No.1 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

---

**5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

Does the gauge fall below the listed specification?

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.1 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

## P0301-CYLINDER 1 MISFIRE (CONTINUED)

### 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.1 Fuel Injector harness connector.

Ignition on, engine not running.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K11) Injector Control No.1 circuit.

With the scan tool, actuate the Fuel Injector.

#### Does the test light blink/flicker?

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

### 11. (K11) INJECTOR CONTROL NO.1 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K11) Injector Control No.1 circuit for an open, short to ground, and short to voltage.

#### Was a problem found with the (K11) Injector Control No.1 circuit?

**Yes** >> Repair the excessive resistance or short in the (K11) Injector Control No.1 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

---

**13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**14. IGNITION WIRE**

**Note: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0301-CYLINDER 1 MISFIRE (CONTINUED)

### 15. IGNITION COIL

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K19) Coil Control No.1 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

### 16. (K19) COIL CONTROL NO.1 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K19) Coil Control No.1 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K19) Coil Control No.1 circuit?**

**Yes** >> Repair the (K19) Coil Control No.1 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0301-CYLINDER 1 MISFIRE (CONTINUED)****17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

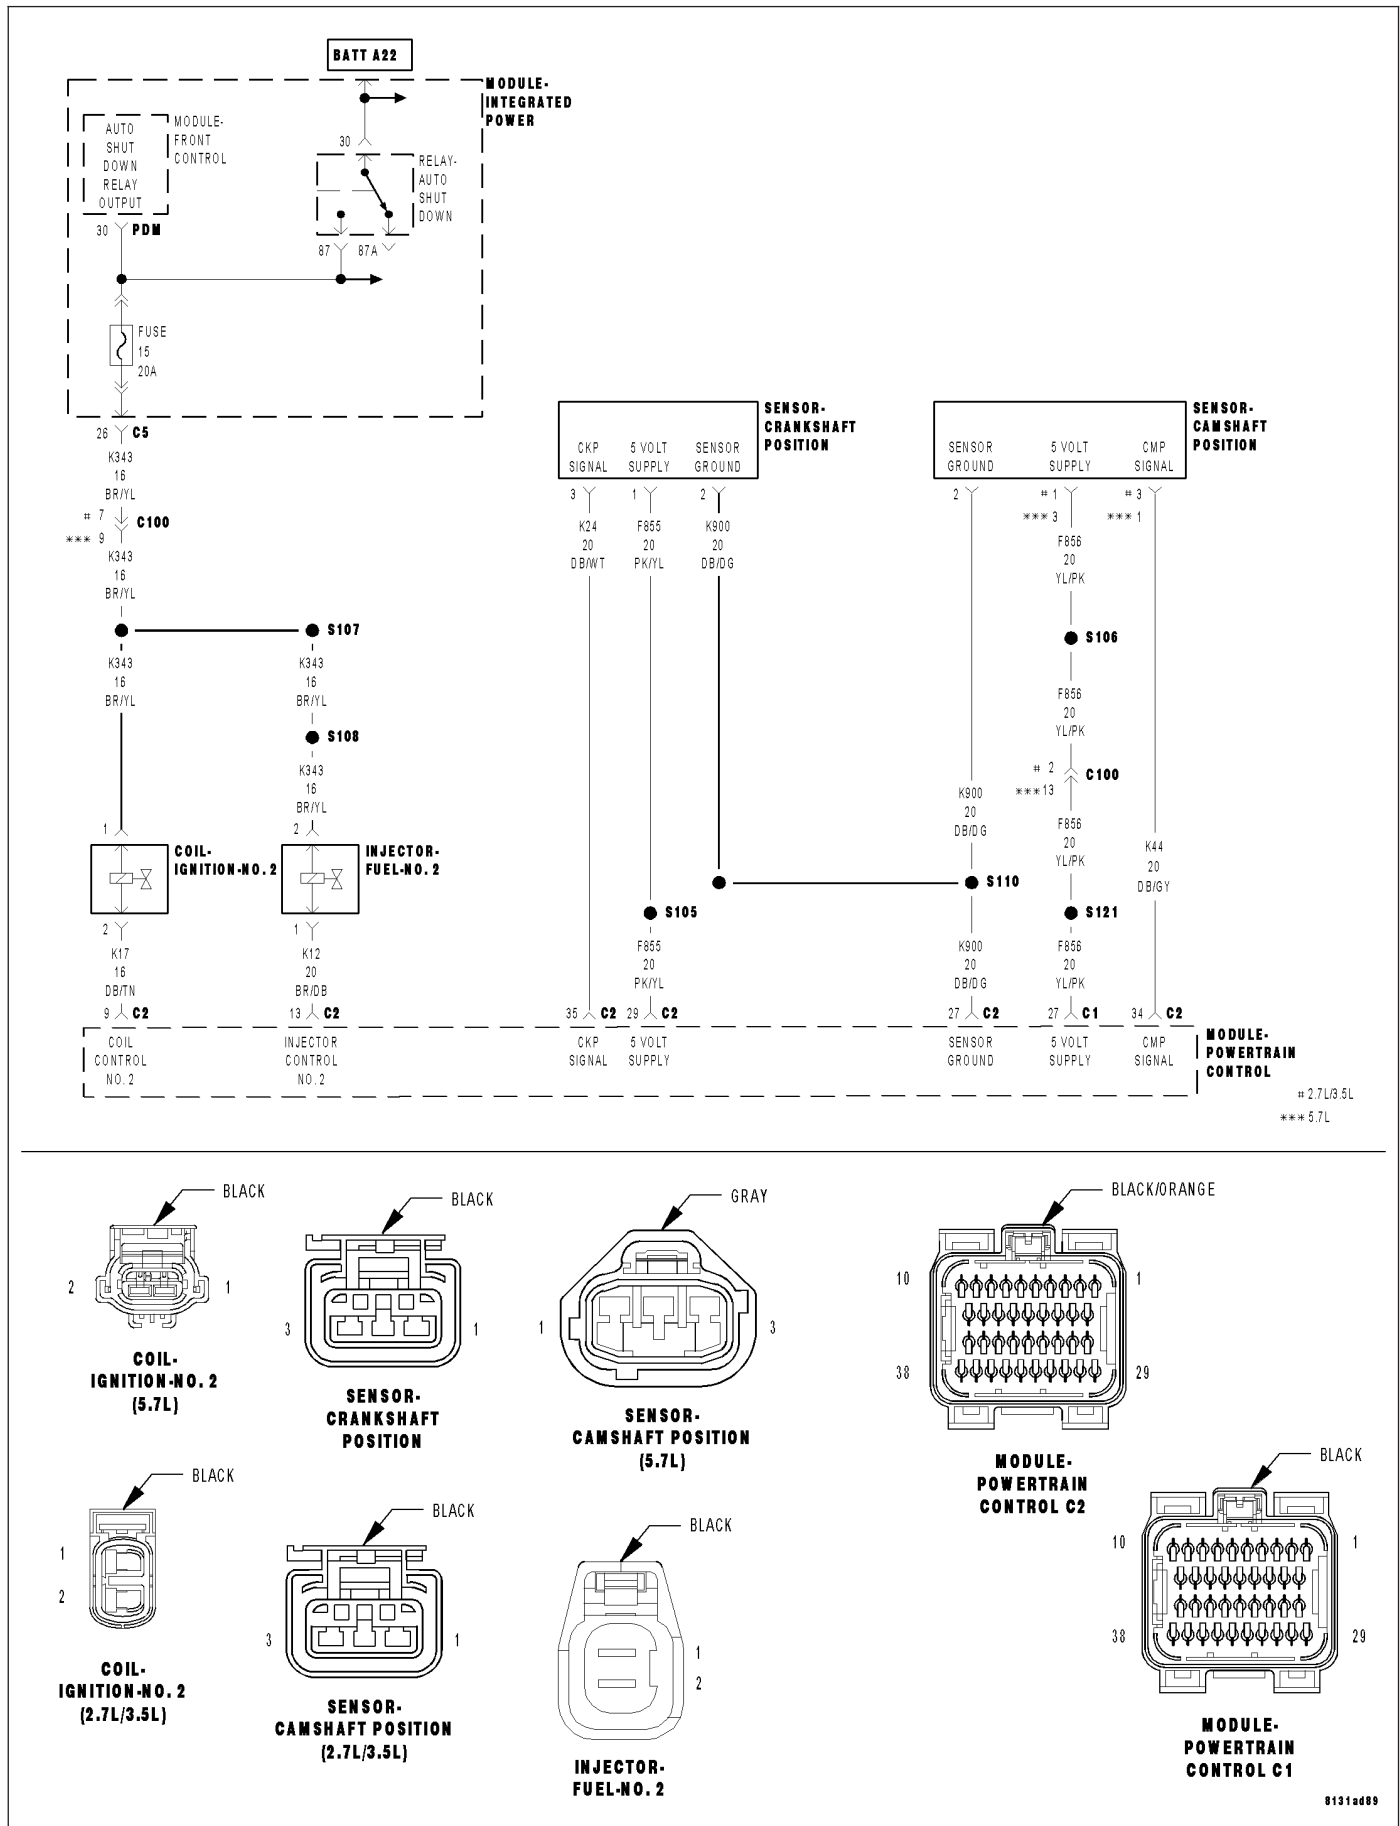

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

# P0302-CYLINDER 2 MISFIRE

**P0302-CYLINDER 2 MISFIRE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.0% misfire rate is measured during two trips, or with 10 % to 30 % misfire rate during one trip. Three good trips to clear the MIL.

Possible Causes

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with the scan tool.

**Is there a misfire present?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

Visually inspect the engine for any of the following conditions.

- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils and the Fuel Injector harness connectors.

Turn the ignition off.

Disconnect the Ignition Coil No.2 harness connector.

Disconnect the Fuel Injector No.2 harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****4. IGNITION SYSTEM OPERATION**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information.

Turn the ignition off.

Connect the Ignition Coil No.2 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

---

**5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi)

Does the gauge fall below the listed specification?

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using scan tool, actuate the No.2 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the No.2 Fuel Injector harness connector.

Ignition on, engine not running.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinder's Injector Control circuit.

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K12) Injector Control No.2 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (K12) INJECTOR CONTROL NO.2 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K12) Injector Control No.2 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K12) Injector Control No.2 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K12) Injector Control No.2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

## P0302-CYLINDER 2 MISFIRE (CONTINUED)

### 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

- Yes** >> Repair or replace fuel supply line as necessary.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 13

### 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

- Yes** >> Replace the Fuel Pump Inlet Strainer.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Ensure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 14. IGNITION WIRE

**Note: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

- Yes** >> Go To 15
- No** >> Replace the Ignition Wire.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****15. IGNITION COIL**

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K17) Coil Control No.2 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

**16. (K17) COIL CONTROL NO.2 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K17) Coil Control No.2 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K17) Coil Control No.2 circuit?**

**Yes** >> Repair the (K17) Coil Control No.2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0302-CYLINDER 2 MISFIRE (CONTINUED)****17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

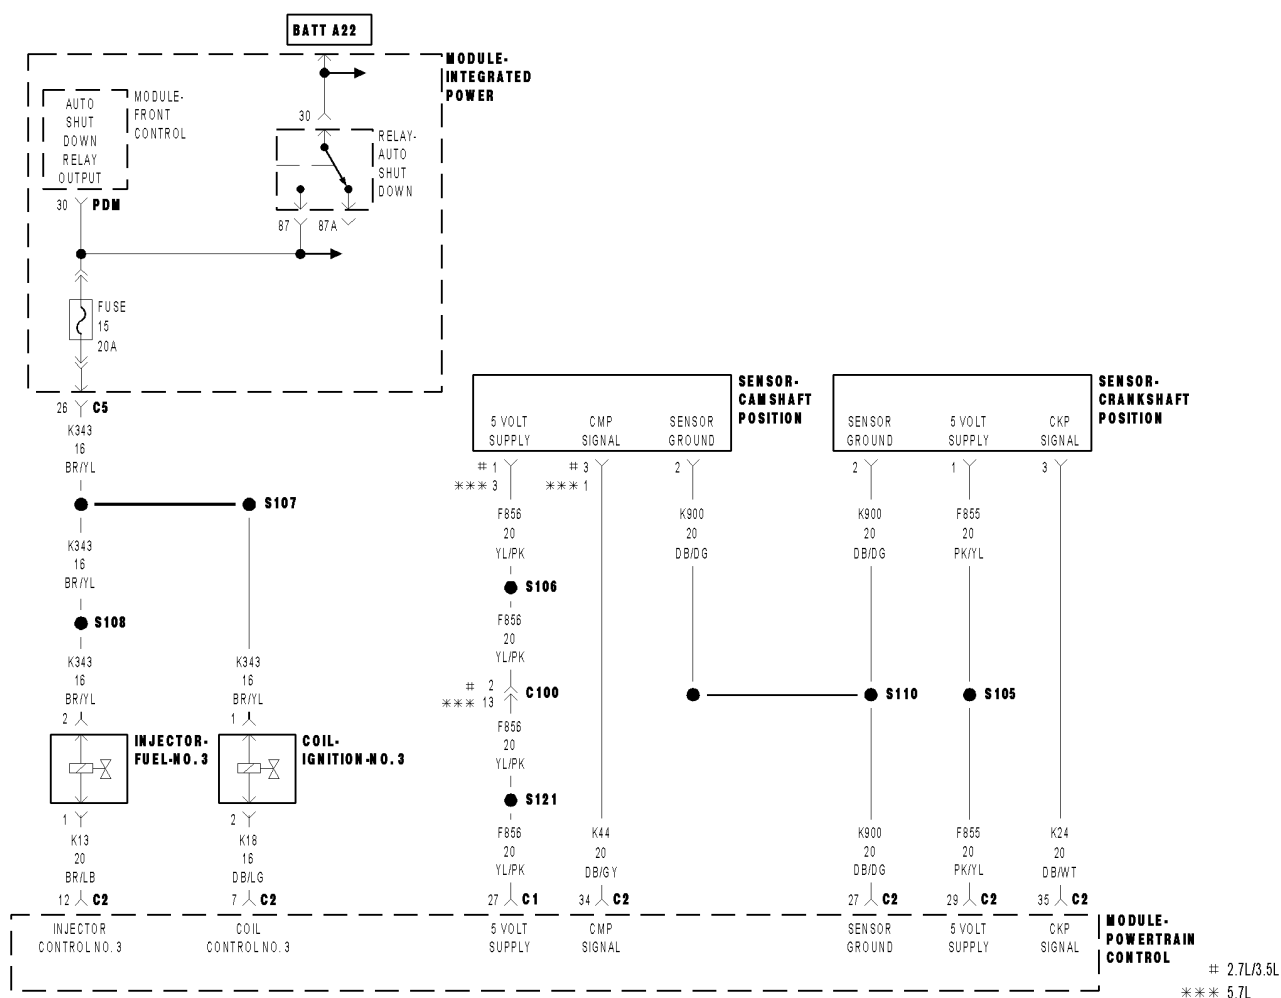

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0303-CYLINDER 3 MISFIRE

**P0303-CYLINDER 3 MISFIRE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.0 % misfire rate is measured during two trips, or with 10% to 30% misfire rate during on trip. Three good trips to clear the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K13) INJECTOR CONTROL NO.3 CIRCUIT (K18) COIL CONTROL NO.3 CIRCUIT IGNITION WIRE SPARK PLUG IGNITION COIL FUEL PUMP INLET STRAINER PLUGGED RESTRICTED FUEL SUPPLY LINE FUEL PUMP MODULE FUEL PRESSURE LEAK DOWN FUEL INJECTOR ENGINE MECHANICAL PROBLEM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with the scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

Visually inspect the engine for any of the following conditions.

- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

## P0303-CYLINDER 3 MISFIRE (CONTINUED)

### 3. (K343) ASD RELAY OUTPUT CIRCUIT

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils and the Fuel Injector harness connectors.

Turn the ignition off.

Disconnect the No.3 Ignition Coil harness connector.

Disconnect the No.3 Fuel Injector harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

#### Does the test light illuminate brightly?

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****4. IGNITION SYSTEM OPERATION**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information.

Turn the ignition off.

Connect the Ignition Coil No.3 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

---

**5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

Does the gauge fall below the listed specification?

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using a scan tool, actuate the No.3 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the No.3 Fuel Injector harness connector.

Ignition on, engine not running.

**Note: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K13) Injector Control No.3 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (K13) INJECTOR CONTROL NO.3 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K13) Injector Control No.3 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K13) Injector Control No.3 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K13) Injector Control No.3 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

---

**13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**14. IGNITION WIRE**

**Note: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0303-CYLINDER 3 MISFIRE (CONTINUED)

### 15. IGNITION COIL

Disconnect the No.3 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K18) Coil Control No.3 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

### 16. (K18) COIL CONTROL NO.3 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K18) Coil Control No.3 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K18) Coil Control No.3 circuit?**

**Yes** >> Repair the (K18) Coil Control No.3 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0303-CYLINDER 3 MISFIRE (CONTINUED)****17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

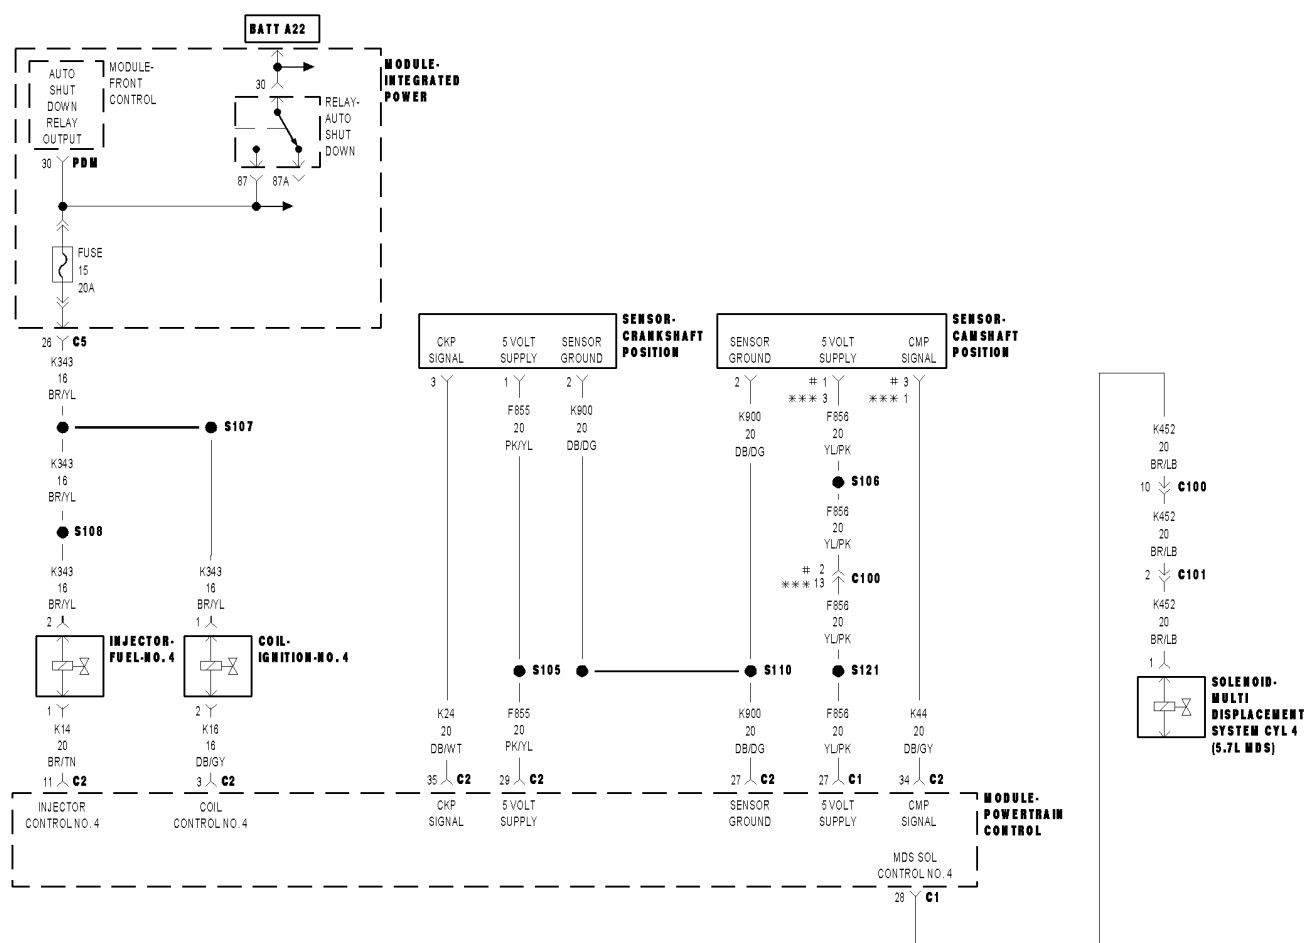

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**No** >> Go To 17

## 17. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

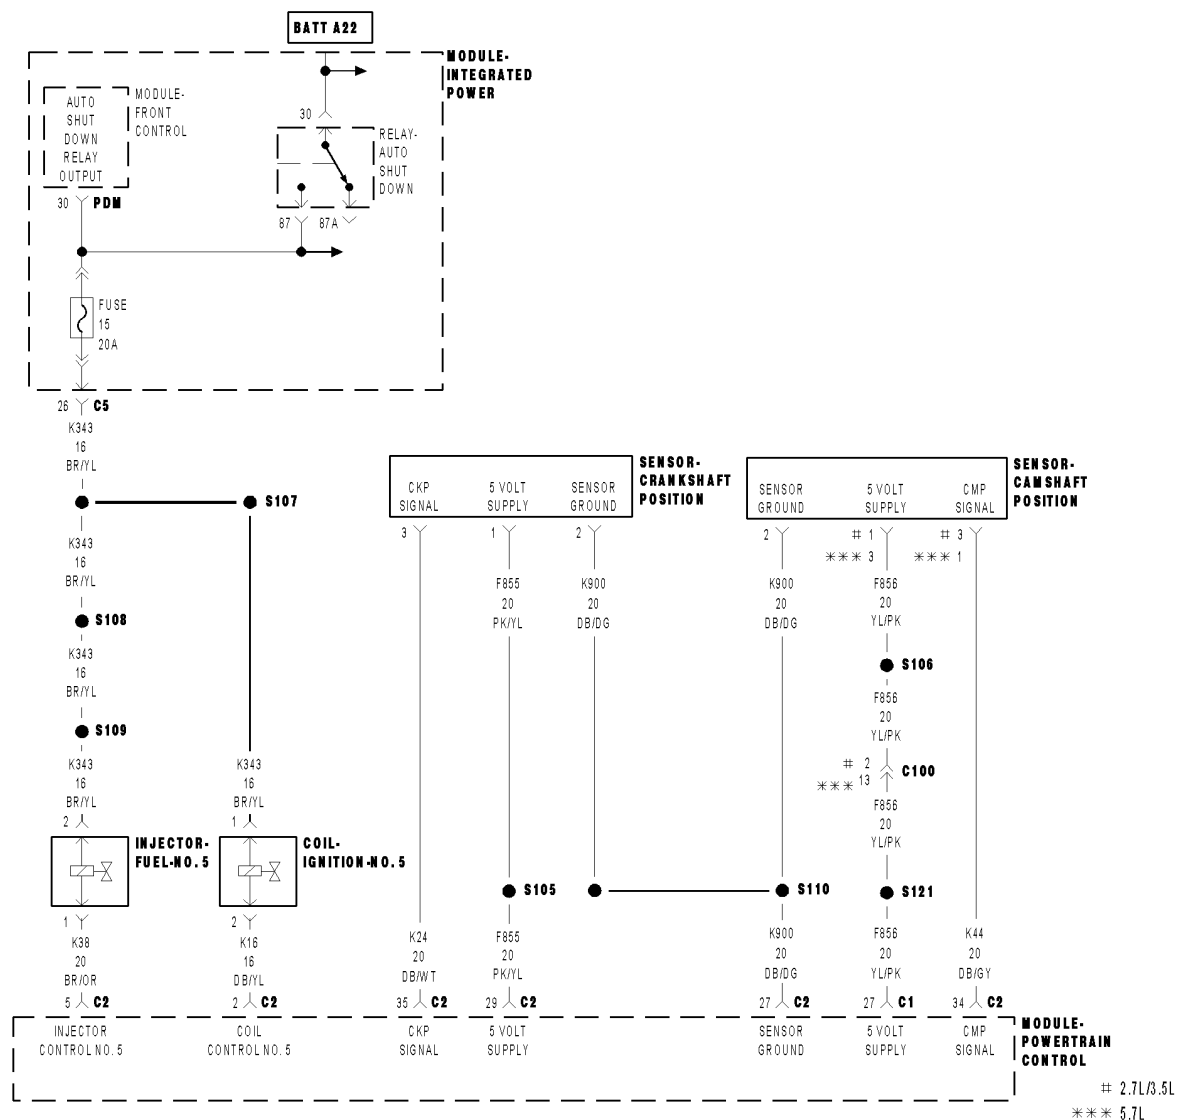

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0305-CYLINDER 5 MISFIRE

**P0305-CYLINDER 5 MISFIRE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.0% misfire rate is measured during two trips, or with 10% to 30% misfire rate during on trip.  
Three good trips to clear the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K38) INJECTOR CONTROL NO.5 CIRCUIT (K16) COIL CONTROL NO.5 CIRCUIT IGNITION WIRE SPARK PLUG IGNITION COIL FUEL PUMP INLET STRAINER PLUGGED RESTRICTED FUEL SUPPLY LINE FUEL PUMP MODULE FUEL PRESSURE LEAK DOWN FUEL INJECTOR ENGINE MECHANICAL PROBLEM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with a scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

Visually inspect the engine for any of the following conditions.

- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils and the Fuel Injector harness connectors.

Turn the ignition off.

Disconnect the No.5 Ignition Coil harness connector.

Disconnect the No.5 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****4. IGNITION SYSTEM OPERATION**

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information.

Turn the ignition off.

Connect the Ignition Coil No.5 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

---

**5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair/replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

Does the gauge fall below the listed specification?

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.5 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the No.5 Fuel Injector harness connector.

Ignition on, engine not running.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinder's Injector Control circuit.

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K38) Injector Control No.5 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (K38) INJECTOR CONTROL NO.5 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K38) Injector Control No.5 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K38) Injector Control No.5 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K38) Injector Control No.5 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

- Yes** >> Repair or replace fuel supply line as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 13
- 

**13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

- Yes** >> Replace the Fuel Pump Inlet Strainer.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- 

**14. IGNITION WIRE**

**Note: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

- Yes** >> Go To 15
- No** >> Replace the Ignition Wire.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****15. IGNITION COIL**

Disconnect the No.5 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K16) Coil Control No.5 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

**16. (K16) COIL CONTROL NO.5 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K16) Coil Control No.5 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K16) Coil Control No.5 circuit?**

**Yes** >> Repair the (K16) Coil Control No.5 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0305-CYLINDER 5 MISFIRE (CONTINUED)****17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

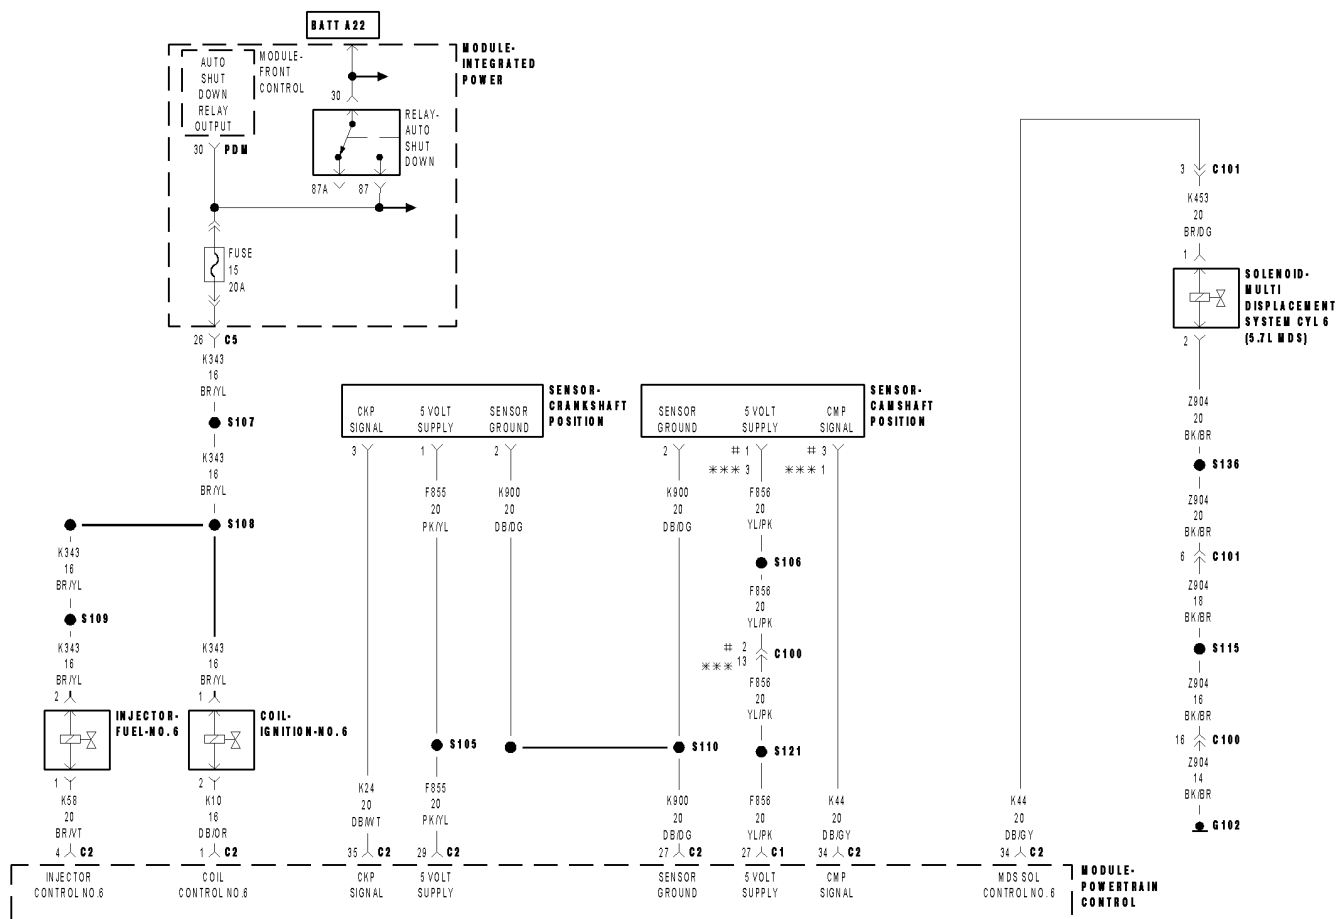

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0306-CYLINDER 6 MISFIRE (CONTINUED)

### 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.6 Fuel Injector harness connector.

Ignition on, engine not running.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K58) Injector Control No.6 circuit.

With the scan tool, actuate the Fuel Injector.

#### Does the test light blink/flicker?

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

### 11. (K58) INJECTOR CONTROL NO.6 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K58) Injector Control No.6 circuit for an open, short to ground, and short to voltage.

#### Was a problem found with the (K58) Injector Control No.6 circuit?

**Yes** >> Repair the excessive resistance or short in the (K58) Injector Control No.6 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**P0306-CYLINDER 6 MISFIRE (CONTINUED)****12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

---

**13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**14. IGNITION WIRE**

**Note: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0306-CYLINDER 6 MISFIRE (CONTINUED)****15. IGNITION COIL**

Disconnect the No.6 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K10) Coil Control No.6 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

## P0306-CYLINDER 6 MISFIRE (CONTINUED)

## 16. (K10) COIL CONTROL NO.6 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K10) Coil Control No.6 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K10) Coil Control No.6 circuit?**

**Yes** >> Repair the (K10) Coil Control No.6 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

## 17. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0307-CYLINDER 7 MISFIRE

**P0307-CYLINDER 7 MISFIRE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.0% misfire rate is measured during two trips, or with 10% to 30% misfire rate during on trip.

Three good trips to clear the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K26) INJECTOR CONTROL NO.7 CIRCUIT (K97) COIL CONTROL NO.7 CIRCUIT IGNITION WIRE SPARK PLUG IGNITION COIL FUEL PUMP INLET STRAINER PLUGGED RESTRICTED FUEL SUPPLY LINE FUEL PUMP MODULE FUEL PRESSURE LEAK DOWN FUEL INJECTOR ENGINE MECHANICAL PROBLEM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with a scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

Visually inspect the engine for any of the following conditions.

- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.7 Ignition Coil harness connector.

Disconnect the No.7 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. IGNITION SYSTEM OPERATION**

Turn the ignition off.

Connect the Ignition Coil No.7 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note:** Connect the Fuel Injector harness connector before continuing.

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.7 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the No.7 Fuel Injector harness connector.

Ignition on, engine not running.

**Note: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K26) Injector Control No.7 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****11. (K26) INJECTOR CONTROL NO.7 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K26) Injector Control No.7 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K26) Injector Control No.7 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K26) Injector Control No.7 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

**P0307-CYLINDER 7 MISFIRE (CONTINUED)****13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

- Yes** >> Replace the Fuel Pump Inlet Strainer.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**14. IGNITION WIRE**

**Note:** If the vehicle being tested does not have an ignition wire answer YES to this test and continue.

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

- Yes** >> Go To 15
- No** >> Replace the Ignition Wire.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**15. IGNITION COIL**

Disconnect the No.7 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K97) Coil Control No.7 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

- Yes** >> Replace the Ignition Coil.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 16

## P0307-CYLINDER 7 MISFIRE (CONTINUED)

## 16. (K97) COIL CONTROL NO.7 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K97) Coil Control No.7 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K97) Coil Control No.7 circuit?**

**Yes** >> Repair the (K97) Coil Control No.7 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

## 17. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

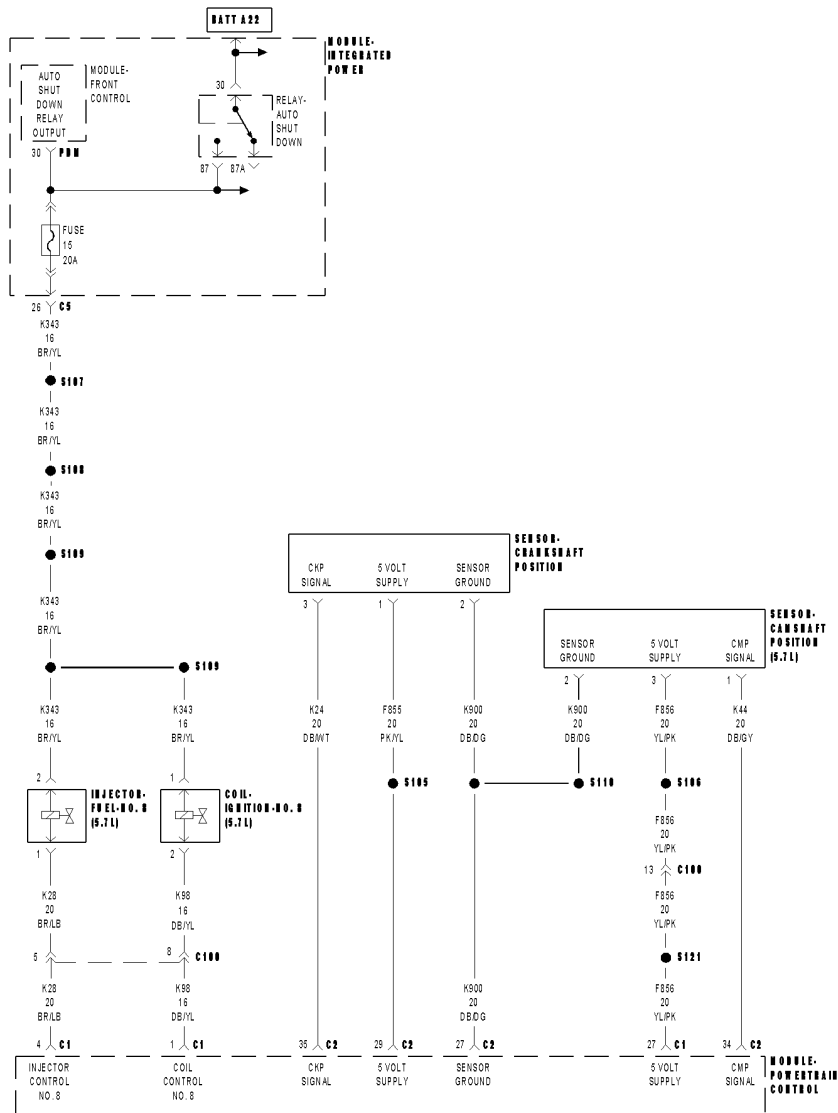

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0308-CYLINDER 8 MISFIRE

**P0308-CYLINDER 8 MISFIRE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Any time the engine is running, and the adaptive numerator has been successfully updated.

- **Set Condition:**

When more than 1.0% misfire rate is measured during two trips, or with 10% to 30% misfire rate during on trip.  
Three good trips to clear the MIL.

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with a scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****2. VISUAL INSPECTION**

**Note:** Anything that affects the speed of the crankshaft can cause a misfire DTC.

**Note:** When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the No.8 Ignition Coil harness connector.

Disconnect the No.8 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Ignition Coil harness connector and Fuel Injector harness connector while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (K343) ASD Relay Output 2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. IGNITION SYSTEM OPERATION**

Turn the ignition off.

Connect the Ignition Coil No.8 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**Note: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**Note: Connect the Fuel Injector harness connector before continuing.**

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****5. SPARK PLUG**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**6. FUEL PRESSURE CHECK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

---

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****7. FUEL PRESSURE LEAK DOWN**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi).

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

---

**8. FUEL INJECTOR OPERATION**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

**CAUTION:** After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.8 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**Note:** Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.

---

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****9. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

---

**10. FUEL INJECTOR**

Turn the ignition off.

Disconnect the No.8 Fuel Injector harness connector.

Ignition on, engine not running.

**Note: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K28) Injector Control No.8 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

---

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****11. (K28) INJECTOR CONTROL NO.8 CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K28) Injector Control No.8 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K28) Injector Control No.8 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K28) Injector Control No.8 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

**12. FUEL SUPPLY LINE RESTRICTED**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

**P0308-CYLINDER 8 MISFIRE (CONTINUED)****13. FUEL PUMP INLET STRAINER**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**14. IGNITION WIRE**

**Note:** If the vehicle being tested does not have an ignition wire answer YES to this test and continue.

Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**15. IGNITION COIL**

Disconnect the No.8 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K98) Coil Control No.8 circuit.

Crank the engine for 5 second while observing the test light.

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 16

## P0308-CYLINDER 8 MISFIRE (CONTINUED)

## 16. (K98) COIL CONTROL NO.8 CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Check the (K98) Coil Control No.8 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K98) Coil Control No.8 circuit?**

**Yes** >> Repair the (K98) Coil Control No.8 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 17

## 17. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

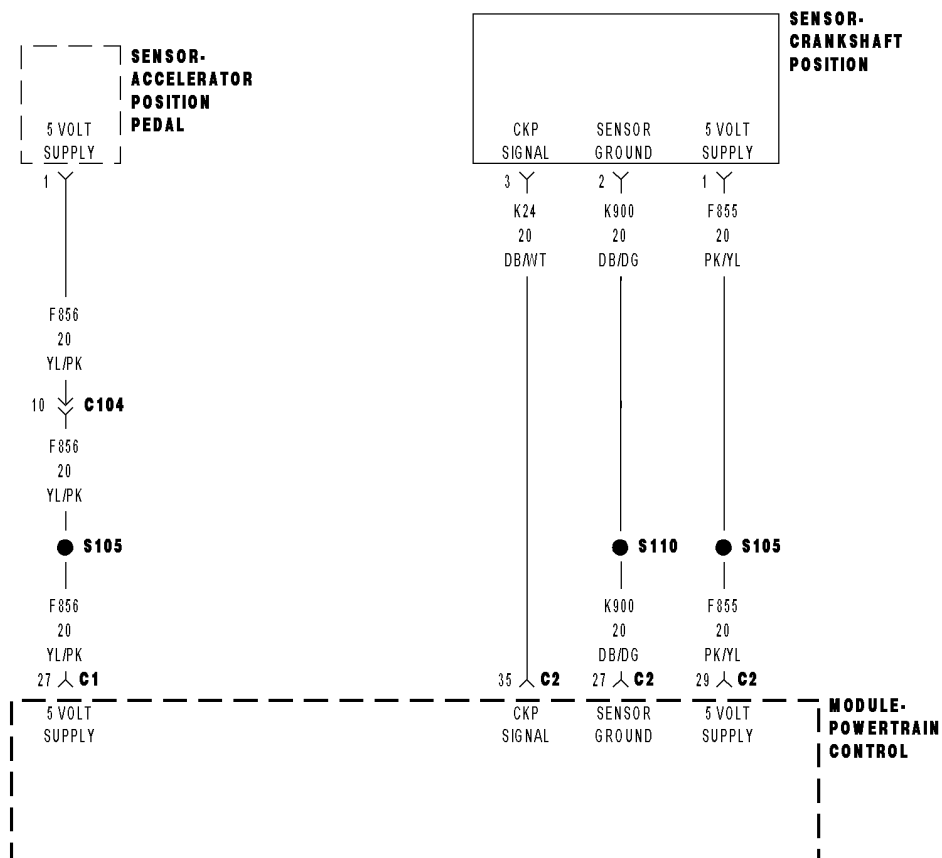

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0315-NO CRANK SENSOR LEARNED

**P0315-NO CRANK SENSOR LEARNED (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Under closed throttle decel and A/C off. ECT above 75°C (167°F). Engine start time is greater than 50 seconds.
- **Set Condition:**  
One of the CKP sensor target windows has more than 2.86% variance from the reference. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
TONE WHEEL/PULSE RING WIRE HARNESS CRANKSHAFT POSITION SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test**

**1. ACTIVE DTC**

Ignition on, engine not running.  
With a scan tool, clear DTCs, PCM battery disconnect to reset the PCM.  
Start the engine.  
If the MIL has not yet illuminated, test drive the vehicle to try to get the code to reset.

- Does the code reset while cranking or during the test drive?**
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0315-NO CRANK SENSOR LEARNED (CONTINUED)

### 2. WIRE HARNESS INSPECTION

Turn the ignition off.

Visually inspect the CKP wire harness. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the CKP wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor is properly installed and the mounting bolt(s) are torqued to the proper specification.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. TONE WHEEL/FLEX PLATE INSPECTION

Remove the Crankshaft Position Sensor.

Inspect the Tone Wheel/Flex Plate slots for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Flex Plate as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

### 4. CRANKSHAFT POSITION SENSOR

**If there are no possible causes remaining, view repair.**

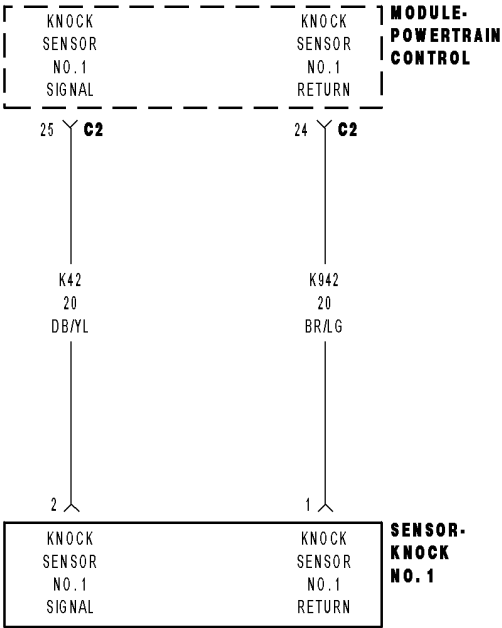

**Repair**

Replace the Crankshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

P0325-KNOCK SENSOR 1 CIRCUIT

## P0325-KNOCK SENSOR 1 CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running.

- **Set Condition:**

The Knock Sensor circuit voltage falls below a minimum value at idle or deceleration. The minimum value is from a look-up table internal to the PCM and is based on engine RPM. DTC will also set if the sensor voltage goes above 5.0 volts. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT OPEN
(K942) KNOCK SENSOR NO.1 RETURN CIRCUIT OPEN
(K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT
(K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND
KNOCK SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0325-KNOCK SENSOR 1 CIRCUIT (CONTINUED)****2. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the No.1 Knock Sensor harness connector.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K42) Knock Sensor No.1 Signal circuit in the Knock Sensor harness connector.

**Does the voltmeter indicate voltage present?**

**Yes** >> Repair the short to battery voltage in the (K42) Knock Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K42) Knock Sensor No.1 Signal circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K42) Knock Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0325-KNOCK SENSOR 1 CIRCUIT (CONTINUED)****4. (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT OPEN**

Measure the resistance of the (K942) Knock Sensor No.1 Return circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K942) Knock Sensor No.1 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO THE (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT**

Measure the resistance between the (K42) Knock Sensor No.1 Signal circuit and the (K942) Knock Sensor No.1 Return circuit in the Knock Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K42) Knock Sensor No.1 Signal circuit and the (K942) Knock Sensor No.1 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0325-KNOCK SENSOR 1 CIRCUIT (CONTINUED)****6. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO GROUND**

Measure the resistance between ground and the (K42) Knock Sensor No.1 Signal circuit in the Knock Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K42) Knock Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. KNOCK SENSOR**

Replace the Knock Sensor.

Ignition on, engine not running.

With the scan tool, erase DTC.

Attempt to operate the vehicle using the information noted in the Freeze Frame.

With the scan tool, read DTCs.

**Does the scan tool display the DTC that was previously erased?**

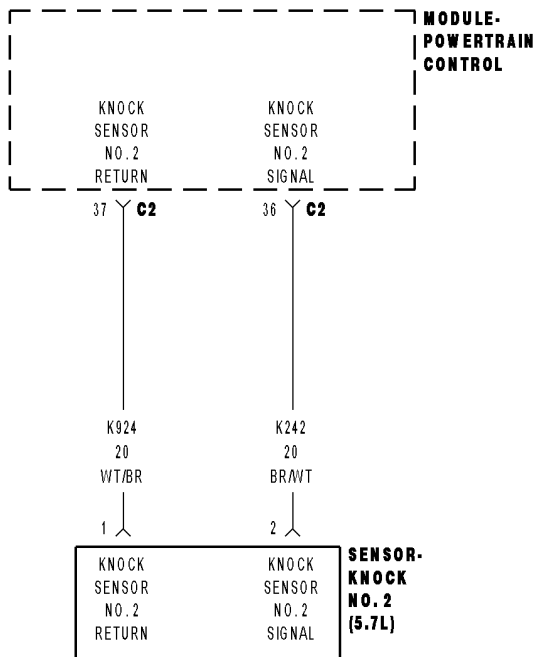

**Yes** >>

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

# P0330-KNOCK SENSOR 2 CIRCUIT

**P0330-KNOCK SENSOR 2 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running

- **Set Condition:**

The Knock Sensor circuit voltage falls below a minimum value at idle or deceleration. The minimum value is from a look-up table internal to the PCM and is based on engine RPM. DTC will also set if the sensor voltage goes above 5.0 volts. One Trip Fault. Three good trips to turn off the MIL. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT OPEN
(K924) KNOCK SENSOR NO.2 RETURN CIRCUIT OPEN
(K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT
(K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND
KNOCK SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0330-KNOCK SENSOR 2 CIRCUIT (CONTINUED)****2. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the No.2 Knock Sensor harness connector.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K242) Knock Sensor No.2 Signal circuit in the Knock Sensor harness connector.

**Does the voltmeter indicate voltage present?**

**Yes** >> Repair the short to battery voltage in the (K242) Knock Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K242) Knock Sensor No.2 Signal circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K242) Knock Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0330-KNOCK SENSOR 2 CIRCUIT (CONTINUED)****4. (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT OPEN**

Measure the resistance of the (K924) Knock Sensor No.2 Return circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K924) Knock Sensor No.2 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO THE (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT**

Measure the resistance between the (K242) Knock Sensor No.2 Signal circuit and the (K924) Knock Sensor No.2 Return circuit in the Knock Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K242) Knock Sensor No.2 Signal circuit and the (K924) Knock Sensor No.2 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0330-KNOCK SENSOR 2 CIRCUIT (CONTINUED)****6. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO GROUND**

Measure the resistance between ground and the (K242) Knock Sensor No.2 Signal circuit in the Knock Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K242) Knock Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. KNOCK SENSOR**

Replace the Knock Sensor.

Ignition on, engine not running.

With the scan tool, erase DTC.

Attempt to operate the vehicle using the information noted in the Freeze Frame.

With the scan tool, read DTCs.

**Does the scan tool display the DTC that was previously erased?**

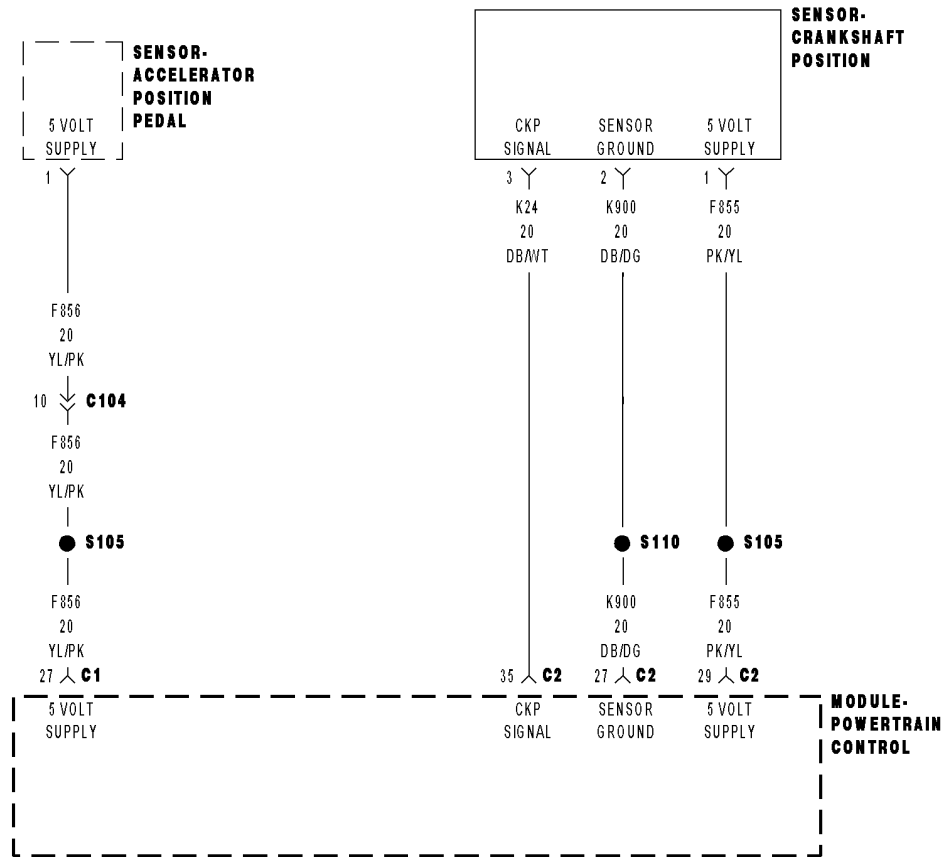

**Yes** >>

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P0335-CRANKSHAFT POSITION SENSOR CIRCUIT

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine cranking.
- **Set Condition:**  
No CKP signal is present during engine cranking, and at least 8 camshaft position sensor signals have occurred. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE
(F855) 5-VOLT SUPPLY CIRCUIT OPEN
(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
(K24) CKP SIGNAL CIRCUIT OPEN
(K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K24) CKP SIGNAL CIRCUIT SHORTED GROUND
(K24) CKP SIGNAL CIRCUIT SHORTED TO (F855) 5-VOLT SUPPLY CIRCUIT
(K900) SENSOR GROUND CIRCUIT OPEN
CRANKSHAFT POSITION SENSOR
CAMSHAFT POSITION SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Crank the engine.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 14

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****2. (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 10

**3. (K24) CKP SIGNAL CIRCUIT**

Measure the voltage on the (K24) CKP Signal circuit in the CKP Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

## P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

### 4. (K900) SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K900) Sensor ground circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K24) CKP Signal circuit and the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K24) CKP Signal circuit and the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****6. CRANKSHAFT POSITION SENSOR**

**Note:** Inspect the slots on the flywheel for damage. If a problem is found repair as necessary.

If there are no possible causes remaining, view repair.

**Repair**

Replace the Crankshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K24) CKP Signal circuit in the CKP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K24) CKP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****8. (K24) CKP SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K24) CKP Signal circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K24) CKP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K24) CKP Signal circuit in the CKP Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K24) CKP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****10. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the voltage above 5.5 volts?**

**Yes** >> Repair the short to battery voltage in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (F855) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the open in the (F855) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****12. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

**13. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0335-CRANKSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****14. ERRATIC CKP SENSOR SIGNAL**

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crank Position Sensor.

Observe the lab scope screen.

Look for any pulses generated by the CKP Sensor.

Allow the engine to idle.

Observe the lab scope screen.

**Did the CKP Sensor generate any erratic pulses?**

**Yes** >> Inspect the related wire harness and replace the Crankshaft Position Sensor if no wiring problems were found.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 15

---

**15. ERRATIC CMP SIGNAL**

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Cam Position Sensor.

Observe the lab scope screen.

Look for any pulses generated by the CMP Sensor.

Allow the engine to idle.

Observe the lab scope screen.

**Did the CMP Sensor generate any pulses?**

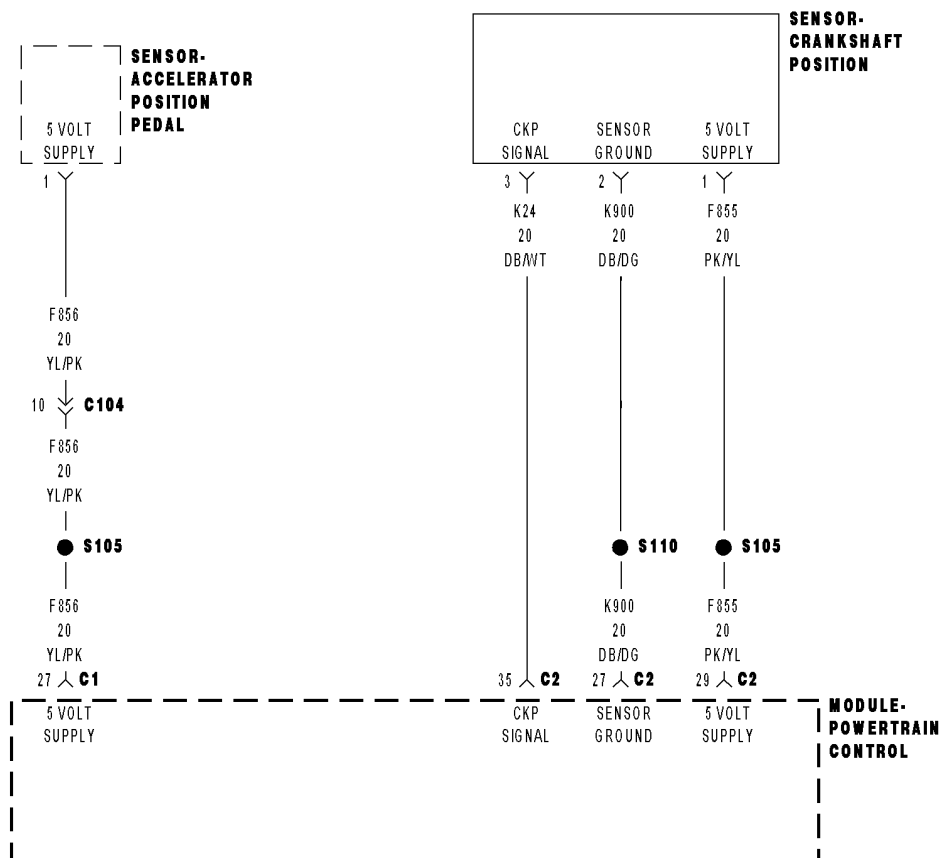

**Yes** >> Inspect the related wire harness and replace the Camshaft Position Sensor if no wiring problems were found.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

---

# P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
While cranking the engine and with the engine running.
- **Set Condition:**  
When the CKP Sensor failure counter reaches 20. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(F855) 5-VOLT SUPPLY CIRCUIT OPEN (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K24) CKP SIGNAL CIRCUIT OPEN (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT CRANKSHAFT POSITION SENSOR TONE WHEEL/PULSE RING PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****2. CHECKING CRANKSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE**

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the Sensor harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 3

**No** >> Go To 8

**3. WIRE HARNESS INSPECTION**

Turn the ignition off.

Visually inspect the related wire harness including the ground circuit. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to the proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****4. (F855) 5-VOLT SUPPLY CIRCUIT OPEN OR SHORTED TO GROUND**

Disconnect the CKP Sensor connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F855) 5-volt Supply circuit. Use Miller special tool #8815 when checking for an open circuit to prevent PCM harness connector terminal damage.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. TONE WHEEL/FLEX PLATE INSPECTION**

Turn the ignition off.

Carefully disconnect the Negative Battery (Ground) cable.

Remove the Crankshaft Position Sensor.

Inspect the Tone Wheel/Flex Plate slots for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Flex Plate as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****6. CHECKING CAMSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE**

Install the CKP Sensor and connect the battery cable.

**Note:** An intermittent condition in the Cam Position Sensor can cause the P0339 to set.

With the a lab scope probe and the Miller special tool #6801, back-probe the (K44) CMP Signal circuit in the Sensor harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Cam Position Sensor.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Replace the Cam Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. CRANKSHAFT POSITION SENSOR**

If there are no possible causes remaining, view repair.

**Repair**

Replace the Crankshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****8. (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K24) CKP Signal circuit in the Sensor harness connector.

Wiggle the related wire harness while taking this measurement.

**Is the voltage above 1 volt?**

**Yes** >> Repair the short to battery voltage in the (K24) CKP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. (K24) CKP SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance in the (K24) CKP Signal circuit from the CKP harness connector to the appropriate terminal of special tool #8815.

Wiggle the wire harness while taking this measurement.

**Is the resistance below 1.0 ohm?**

**Yes** >> Go To 10

**No** >> Repair the excessive resistance in the (K24) CKP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****10. (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K24) CKP Signal circuit in the CKP Sensor harness connector.

Wiggle the related wire harness while monitoring the resistance value.

**Does the resistance ever go below 100 ohms?**

**Yes** >> Repair the short to ground in the (K24) Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance between the (F855) 5-volt Supply circuit and the (K24) CKP Signal circuit in the CKP harness connector.

Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (F855) 5-volt Supply circuit and the (K24) CKP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 12

**12. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

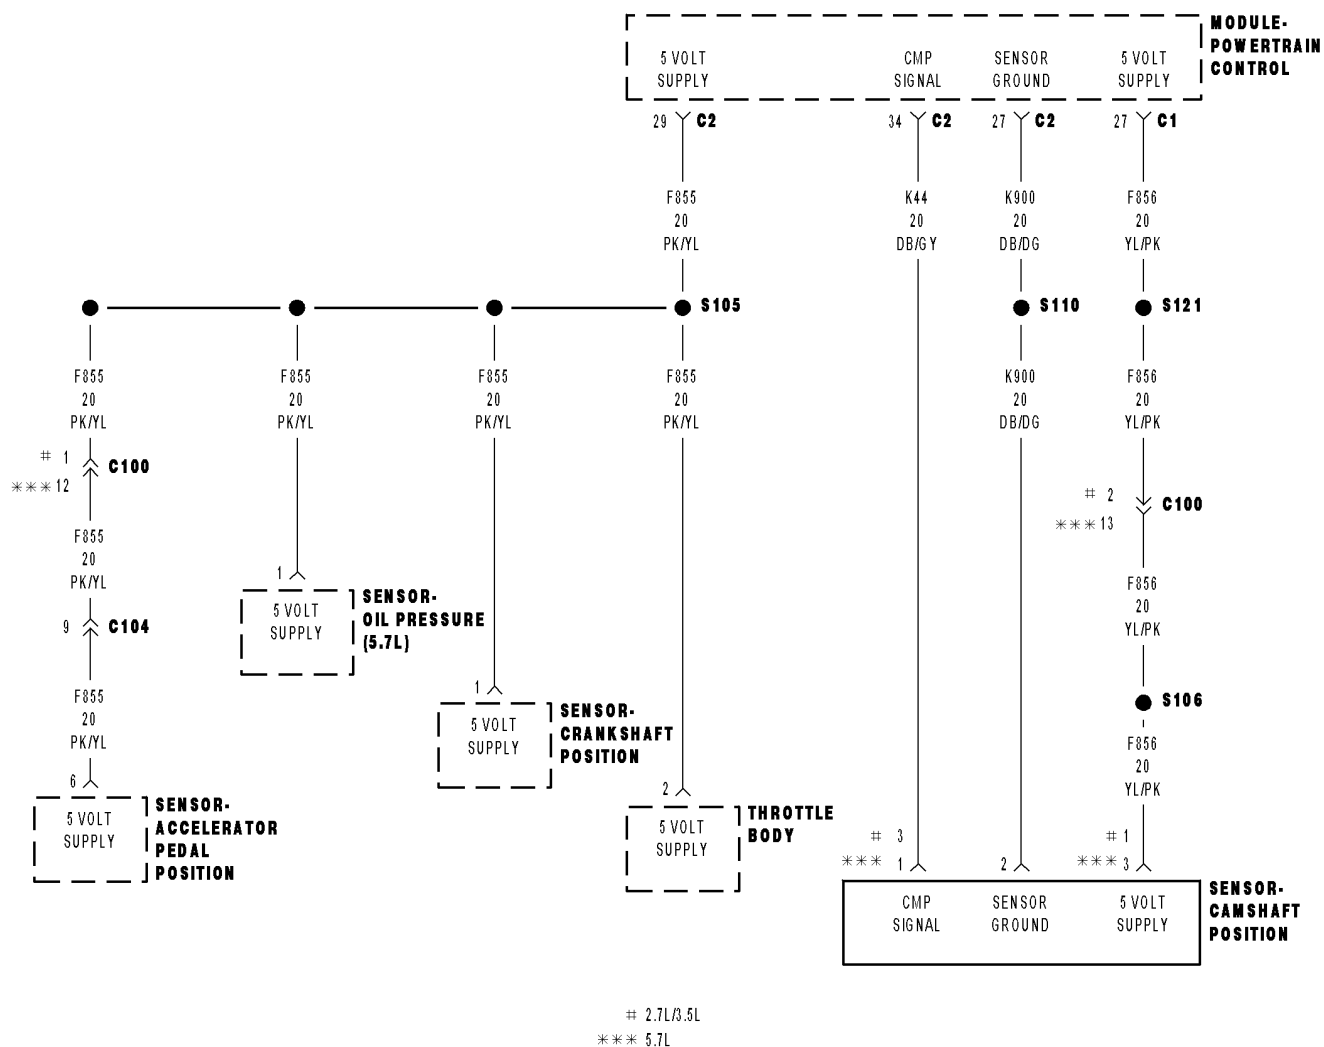

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT

### P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 During engine cranking and with the engine running. Battery voltage greater than 10 volts.
- Set Condition:**  
 At least 5 seconds or 2.5 engine revolutions have elapsed with crankshaft position sensor signals present but no camshaft position sensor signal. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE (F856) 5-VOLT SUPPLY CIRCUIT OPEN (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K44) CMP SIGNAL CIRCUIT OPEN (K44) CMP SIGNAL CIRCUIT SHORTED GROUND (K44) CMP SIGNAL SHORTED TO (F856) 5-VOLT SUPPLY CIRCUIT (K900) SENSOR GROUND CIRCUIT OPEN CAMSHAFT POSITION SENSOR CRANKSHAFT POSITION SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Crank the engine.  
 Ignition on, engine not running.  
 With a scan tool read the DTCs.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**     >> Go To 14

**P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 10

**3. (K44) CMP SIGNAL CIRCUIT**

Measure the voltage on the (K44) CMP Signal circuit in the CMP Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

### 4. (K900) SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K900) Sensor ground circuit from the CMP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (K44) CMP SIGNAL SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K44) CMP Signal circuit and the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K44) CMP Signal circuit and the (F856) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****6. CAMSHAFT POSITION SENSOR**

**Note:** Inspect the Camshaft sprocket for damage per the Service Information. If a problem is found repair as necessary.

If there are no possible causes remaining, view repair.

**Repair**

Replace the Camshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K44) CMP Signal circuit in the CMP Sensor harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (K44) CMP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

### 8. (K44) CMP SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K44) CMP Signal circuit from the CMP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K44) CMP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 9. (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K44) CMP Signal circuit in the CMP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K44) CMP Signal circuit  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)****10. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**11. (F856) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit between the CMP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the open in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

### 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 13

## 13. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT (CONTINUED)

## 14. ERRATIC CMP SIGNAL

With a lab scope probe and the Miller special tool #6801, back probe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap the Camshaft Position Sensor.

Observe the lab scope screen.

Allow the engine to idle.

Observe the lab scope screen.

**Did the CMP Sensor generate any erratic pulses?**

**Yes** >> Replace the Camshaft Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 15

## 15. ERRATIC CKP SIGNAL

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crankshaft Position Sensor.

Observe the lab scope screen.

Allow the engine to idle.

Observe the lab scope screen.

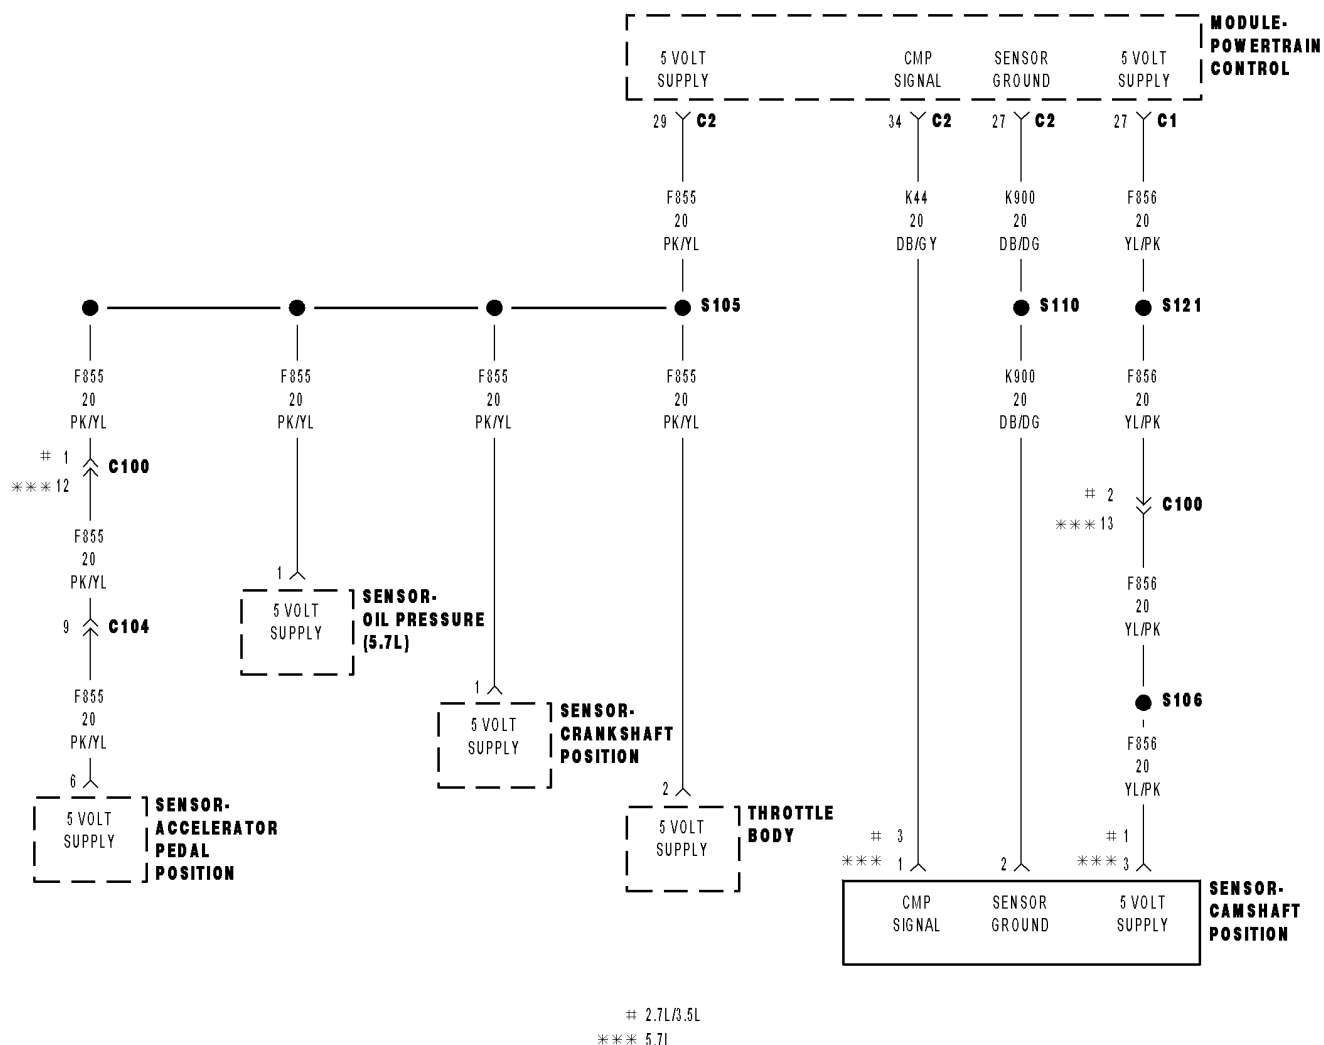

**Did the CKP Sensor generate any erratic pulses?**

**Yes** >> Replace the Crankshaft Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

# P0344-CAMSHAFT POSITION SENSOR INTERMITTENT

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

While cranking the engine and engine running.

- **Set Condition:**

When the failure counter reaches 20. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT OPEN (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (K44) CMP SIGNAL CIRCUIT OPEN (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND (K44) CMP SIGNAL CIRCUIT SHORTED TO (F856) 5-VOLT SUPPLY TONE WHEEL/PULSE RING CAMSHAFT POSITION SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****2. CHECKING CAMSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE**

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 3

**No** >> Go To 8

**3. WIRE HARNESS INSPECTION**

Turn the ignition off.

Visually inspect the related wire harness including the ground circuit. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to the proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****4. (F856) 5-VOLT SUPPLY CIRCUIT OPEN OR SHORTED TO GROUND**

Disconnect the CMP Sensor connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F856) 5-volt Supply circuit. Use Miller special tool #8815 when checking for an open circuit to prevent PCM harness connector terminal damage.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. TONE WHEEL/PULSE RING INSPECTION**

Turn the ignition off.

Carefully disconnect the Battery Ground cable.

Remove the Camshaft Position Sensor.

Inspect the Tone Wheel/Pulse Ring for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Pulse Ring as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****6. CHECKING CRANKSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE**

**Note:** An intermittent condition in the Crank Position Sensor can cause the P0344 to set.

Install the CMP Sensor and connect the Battery cable.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harness connector.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crank Position Sensor.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Replace the Crank Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER

- 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. CAMSHAFT POSITION SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Camshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****8. (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the CMP Sensor connector.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K44) CMP Signal circuit.

Wiggle the related wire harness while taking this measurement.

**Does the voltage ever increase above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K44) CMP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. (K44) CMP SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance in the (K44) CMP Signal circuit from the CMP harness connector to the appropriate terminal of special tool #8815.

Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the excessive resistance in the (K44) CMP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****10. (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K44) CMP Signal circuit in the CMP Sensor harness connector.

Wiggle the related wire harness while monitoring the resistance value.

**Does the resistance ever go below 100 ohms?**

**Yes** >> Repair the short to ground in the (K44) CMP Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

**P0344-CAMSHAFT POSITION SENSOR INTERMITTENT (CONTINUED)****11. (K44) CMP SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance between the (F856) 5-volt Supply circuit and the (K44) CMP Signal circuit in the CMP harness connector.

Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (F856) 5-volt Supply circuit and the (K44) CMP Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 12

**12. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0401-EGR SYSTEM PERFORMANCE

**P0401-EGR SYSTEM PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running for greater than two minutes with the Engine Coolant Temp greater than 70°C (158°F). EGR active. Less than 8500 feet. Ambient temperature greater than -6°C (20°F).

- **Set Condition:**

The PCM closes the EGR valve while monitoring the O2 Sensor signal. Once a closed EGR fueling sample has been established the PCM then ramps in EGR and additional fueling while monitoring the O2 sensor signal in the open state. A fueling sample is again established. The PCM then compares the different O2 Sensor signal readings (fueling samples). If a larger than expected variation is detected, a soft failure is recorded. Three soft failures set a one trip failure. After two failed trips, a DTC is set and the MIL is illuminated.

Possible Causes
(Z904) EGR SOLENOID GROUND CIRCUIT OPEN
(K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND
(K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K35) EGR SOLENOID CONTROL CIRCUIT OPEN
EGR SOLENOID ASSEMBLY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0401-EGR SYSTEM PERFORMANCE (CONTINUED)****2. EGR OPERATION**

**Note:** If the vehicle is running rough at idle (scan tool not actuating) follow the yes path to continue.

Turn all accessories off.

Start the engine.

Allow the engine to reach normal operating temperature.

With the scan tool, enter Engine System Test, then EGR System Test.

Actuate the FLOW function in the EGR System Test.

**Did the engine run rough or stall?**

**Yes** >> Go To 3

**No** >> Go To 6

---

**3. EGR VALVE OPEN AT IDLE**

Turn the ignition off.

Disconnect the EGR Solenoid Assembly harness connector.

Start engine. Attempt to allow the engine to idle.

**Does the engine run rough or stall?**

**Yes** >> Inspect the EGR tube assembly. If OK, replace the EGR valve.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. EGR VALVE ASSEMBLY INSPECTION**

Inspect the EGR Assembly for the following.

Gasket(s) for leaking

Damage and/or holes in the EGR tube(s)

Carbon build up on or near the EGR pintle and passage ways.

Obstruction in the EGR tubes.

**Were any problem found?**

**Yes** >> Repair or replace the EGR Assembly as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**P0401-EGR SYSTEM PERFORMANCE (CONTINUED)****5. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Ignition on, engine not running.

Measure the voltage on the (K35) EGR Solenoid Control circuit in the EGR Solenoid connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K35) EGR Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 10

**6. EGR SOLENOID ASSEMBLY**

Disconnect the EGR Solenoid harness connector.

Using a 12-volt test light, jump across the (K35) EGR Solenoid Control terminal and the (Z904 Ground terminal in the EGR Solenoid harness connector.

With the scan tool, actuate the EGR solenoid.

**Does the 12-volt test light flash on and off?**

**Yes** >> Inspect the tube(s) for obstructions and damage, repair as necessary. If OK, replace the EGR Solenoid Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

## P0401-EGR SYSTEM PERFORMANCE (CONTINUED)

### 7. (Z904) EGR SOLENOID GROUND CIRCUIT OPEN

Turn the ignition off.

Using a 12-volt test light connected to battery voltage, probe the (Z904) EGR Solenoid ground circuit in the EGR Solenoid harness connector.

**Does the 12-volt test light illuminate brightly?**

**Yes** >> Go To 8

**No** >> Repair the open in the (Z904) EGR Solenoid ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 8. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Disconnect the PCM harness connector.

Measure the resistance between ground and the (K35) EGR Solenoid Control circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K35) EGR Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**P0401-EGR SYSTEM PERFORMANCE (CONTINUED)****9. (K35) EGR SOLENOID CONTROL CIRCUIT OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K35) EGR Solenoid Control circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the open in the (K35) EGR Solenoid Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0403-EGR SOLENOID CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running. Battery voltage greater than 10 volts.

- **Set Condition:**

The EGR solenoid control circuit is not in the expected state when requested to operate by the PCM. One Trip Fault.

Possible Causes
(Z904) EGR SOLENOID GROUND CIRCUIT OPEN
(K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND
(K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT
(K35) EGR SOLENOID CONTROL CIRCUIT OPEN
EGR SOLENOID ASSEMBLY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0403-EGR SOLENOID CIRCUIT (CONTINUED)****2. EGR SOLENOID ASSEMBLY**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to the (Z904) EGR Solenoid ground circuit, probe the (K34) EGR Solenoid Control circuit.

With a scan tool, actuate the EGR solenoid.

**Does the 12-volt test light flash on and off?**

**Yes** >> Replace the EGR Solenoid Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (Z9048) EGR SOLENOID GROUND CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

Using a 12-volt test light connected to the 12-volts, probe the (Z904) EGR Solenoid ground circuit in the EGR Solenoid harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open in the (Z904) EGR Solenoid ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0403-EGR SOLENOID CIRCUIT (CONTINUED)****4. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Ignition on, engine not running.

Measure the voltage on the (K35) EGR Solenoid Control circuit in the EGR Solenoid connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K35) EGR Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Measure the resistance between ground and the (K35) EGR Solenoid Control circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K35) EGR Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (K35) EGR Solenoid Control circuit and the (K900) Sensor ground circuit in the EGR Solenoid connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground circuit and the (K35) EGR Solenoid Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

## P0403-EGR SOLENOID CIRCUIT (CONTINUED)

### 7. (K35) EGR SOLENOID CONTROL CIRCUIT OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K35) EGR Solenoid Control circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K35) EGR Solenoid Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 8. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

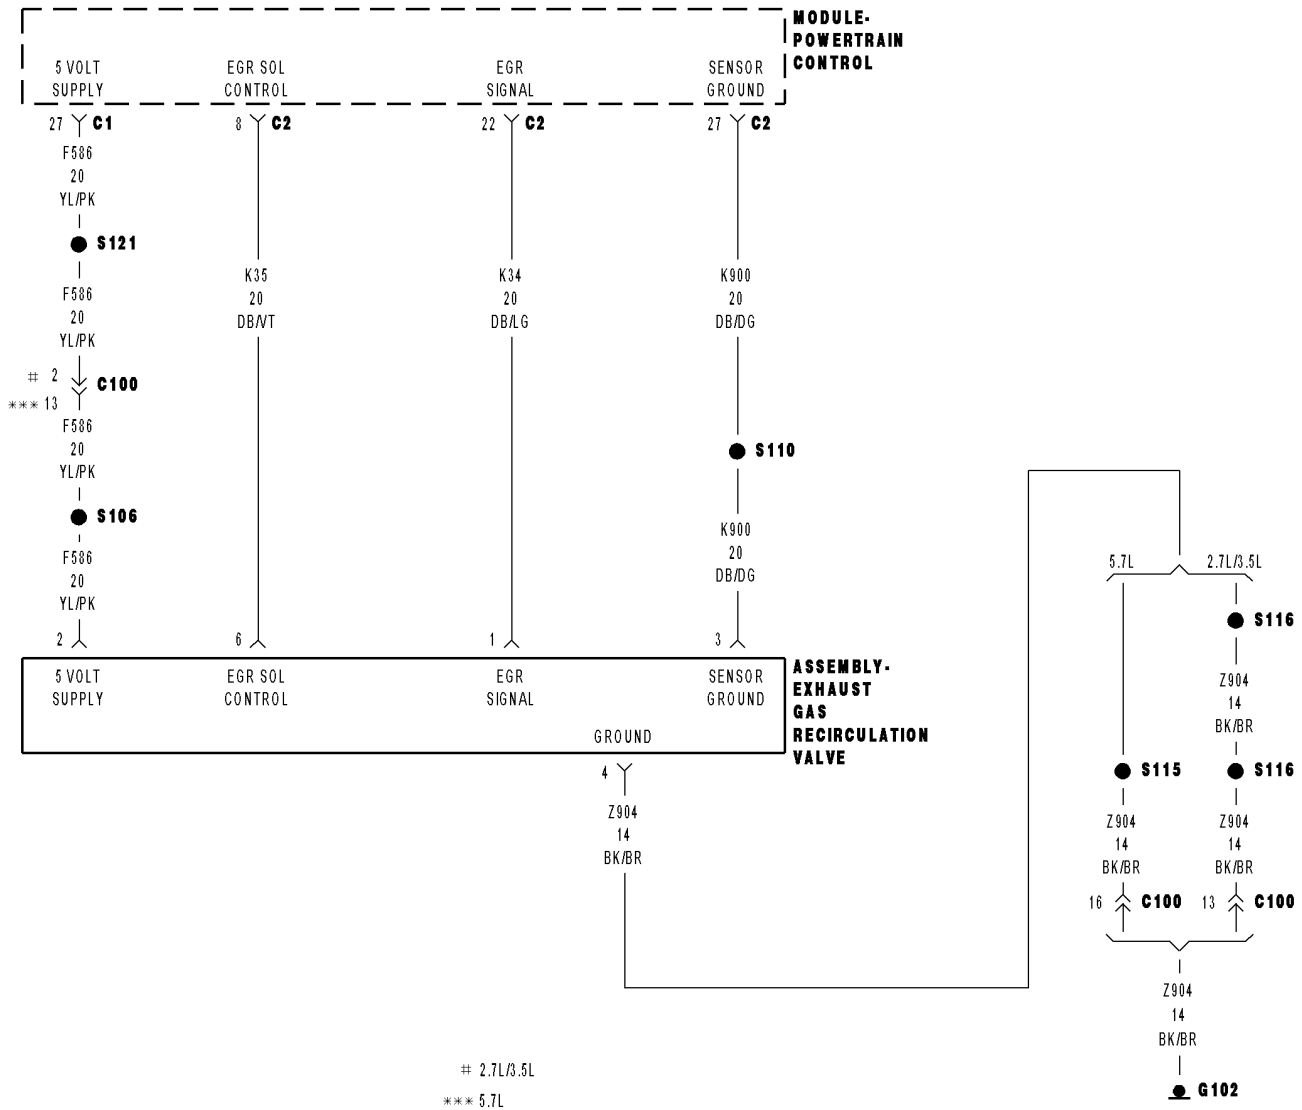

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0404-EGR POSITION SENSOR PERFORMANCE**

**P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running.
- **Set Condition:**  
The EGR flow or valve movement is not what is expected.

Possible Causes
EXCESSIVE RESISTANCE IN (F856) 5-VOLT SUPPLY (K35) EGR SOLENOID CONTROL CIRCUIT (K34) EGR SENSOR SIGNAL CIRCUIT OPEN (K34) EGR SENSOR SIGNAL CIRCUIT SHORTED TO GROUND (K900) SENSOR GROUND CIRCUIT OPEN EGR SOLENOID ASSEMBLY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)****2. EGR POSITION VOLTAGE**

**Note:** Diagnose all other EGR DTC(s) before continuing.

Start the engine.

With a scan tool, read the EGR Position Sensor voltage.

Choose a conclusion that best matches the EGR voltage reading.

**Below 3.5 volts**

Go To 3

**Between 3.5 volts to 4.3 volts**

Go To 5

**Above 4.3 volts**

Go To 6

**3. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F856) 5-volt Supply circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)****4. (K34) EGR SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K34) EGR Sensor Signal circuit in the EGR Solenoid harness connector.

**Is the resistance below 5.0 ohms?**

- Yes** >> Repair the short to ground in the (K34) EGR Sensor Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Replace the EGR Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K35) EGR SOLENOID CONTROL CIRCUIT**

Ignition on, engine not running.

With the scan tool, actuate the EGR Solenoid.

Allow the EGR Solenoid to actuate for at least 15 seconds.

Feel the EGR Solenoid for operation.

Stop actuation.

**Does EGR Solenoid operate while actuating and then turn off when actuation test is stopped?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Refer to the P0403-EGR Control Circuit diagnostic procedure and continue.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)****6. (K34) EGR SENSOR SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Ignition on, engine not running.

Measure the voltage of the (K34) EGR Sensor Signal circuit in the EGR Solenoid harness connector.

**Is the voltage above 4.30 volts?**

**Yes** >> Go To 7

**No** >> Go To 8

**7. (K900) SENSOR GROUND CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K900) Sensor ground circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the EGR Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)

### 8. (K34) EGR SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K34) EGR Sensor Signal circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K34) EGR Sensor Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 9. (K34) EGR SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K34) EGR Sensor Signal circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K34) EGR Sensor Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Go To 10

**P0404-EGR POSITION SENSOR PERFORMANCE (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0405-EGR POSITION SENSOR CIRCUIT LOW

**P0405-EGR POSITION SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage above 10.0 volts.
- **Set Condition:**  
EGR Position Sensor Signal is less than 0.1 of a volt. One trip Fault.

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (F856) 5-VOLT SUPPLY CIRCUIT OPEN (K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO GROUND (K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT EGR POSITION SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. EGR POSITION SENSOR BELOW 0.2 OF A VOLT**

Ignition on, engine not running.

With a scan tool, read the EGR Position Sensor voltage.

**Is the voltage below 0.2 of a volt?**

- Yes**    >> Go To 2
- No**     >> Go To 9

**P0405-EGR POSITION SENSOR CIRCUIT LOW (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Ignition on, engine not running.

Measure the voltage of the (F856) 5-volt Supply circuit in the EGR Solenoid harness connector.

**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

**3. EGR POSITION**

With the scan tool, monitor the EGR Position Sensor voltage.

**Is the voltage above 4.5 volts?**

**Yes** >> Replace the EGR Solenoid Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance between ground and the (K34) EGR Position Sensor Signal circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground circuit in the (K34) EGR Position Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0405-EGR POSITION SENSOR CIRCUIT LOW (CONTINUED)****5. (K34) EGR SENSOR SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (K34) EGR Position Sensor Signal circuit and (K900) Sensor ground circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K34) EGR Position Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**6. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

## P0405-EGR POSITION SENSOR CIRCUIT LOW (CONTINUED)

### 7. (F856) 5-VOLT SUPPLY CIRCUIT OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F856) 5-volt Supply circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (F856) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 8. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0405-EGR POSITION SENSOR CIRCUIT LOW (CONTINUED)****9. EGR POSITION SENSOR SWEEP**

**Note:** The engine will run rough and possibly stall in the following test. Feather the accelerator pedal to keep the engine from stalling.

Start the engine.

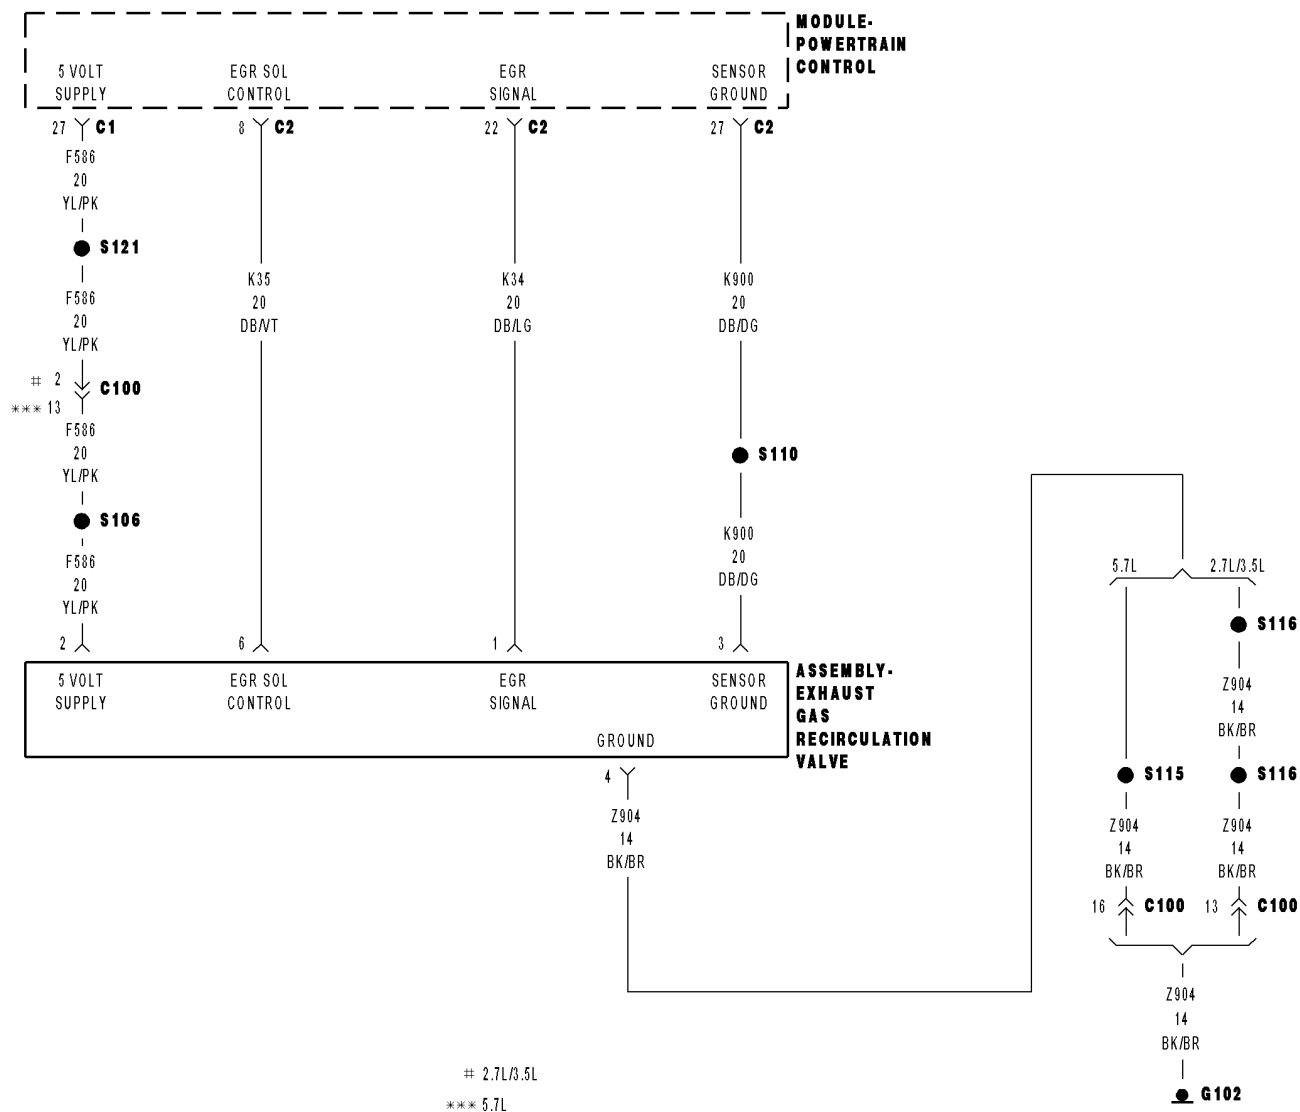

With the scan tool, enter System Test and then EGR System Test. Push the 4=VARIABLE function.

Monitor the EGR voltage while slowly pushing the up arrow.

**Is the voltage change smooth?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace the EGR Solenoid Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

## P0406-EGR POSITION SENSOR CIRCUIT HIGH

**P0406-EGR POSITION SENSOR CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
EGR position sensor signal is greater than 4.89. One trip Fault.

Possible Causes
(K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO (F856) 5-VOLT SUPPLY CIRCUIT
(K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K34) EGR POSITION SENSOR SIGNAL CIRCUIT OPEN
(K900) SENSOR GROUND CIRCUIT OPEN
EGR SOLENOID ASSEMBLY
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. EGR POSITION SENSOR VOLTAGE ABOVE 4.5 VOLTS**

Start the engine.

With the scan tool, read the EGR Position Sensor voltage.

**Is the voltage above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Go To 8

**P0406-EGR POSITION SENSOR CIRCUIT HIGH (CONTINUED)****2. (K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between the (K34) EGR Position Sensor Signal circuit and the (F856) 5-volt Supply circuit in the EGR Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K34) EGR Position Sensor Signal circuit and the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K34) EGR POSITION SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Ignition on, engine not running.

Measure the voltage on the (K34) EGR Sensor Signal circuit in the EGR Solenoid harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (K34) EGR Position Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0406-EGR POSITION SENSOR CIRCUIT HIGH (CONTINUED)****4. EGR SOLENOID ASSEMBLY**

Turn the ignition off.

Connect the PCM harness connectors.

Connect a jumper wire between the (K34) EGR Position Sensor Signal circuit and the (K900) Sensor ground circuit.

With the scan tool, monitor the EGR Position Sensor voltage.

Ignition on, engine not running.

**Is the voltage below 0.5 of a volt?**

**Yes** >> Replace the EGR Solenoid Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. (K34) EGR POSITION SENSOR SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K34) EGR Position Sensor Signal circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K34) EGR Position Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0406-EGR POSITION SENSOR CIRCUIT HIGH (CONTINUED)****6. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the EGR Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 30 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0406-EGR POSITION SENSOR CIRCUIT HIGH (CONTINUED)****8. EGR POSITION SENSOR SWEEP**

**Note:** The engine will run rough and possibly stall in the following test. Feather the accelerator pedal to keep the engine from stalling.

Start the engine.

With the scan tool, enter System Test and then EGR System Test. Push the 4=VARIABLE function.

Monitor the EGR voltage while slowly pushing the up arrow.

**Is the voltage change smooth?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace the EGR Solenoid Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

## P0420-CATALYST 1/1 EFFICIENCY

**P0420-CATALYST 1/1 EFFICIENCY (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

After engine warm up to 70°C (158°F), 180 seconds of open throttle operation, at a speed greater than 18 mph and less than 55 mph, with the engine at 1200-1700 rpm and MAP vacuum between 15.0 and 21.0 inches of mercury (Hg).

- **Set Condition:**

As catalyst efficiency deteriorates, the switch rate of the downstream O2 sensor approaches that of the upstream O2 sensor. If at any point during the test the switch ratio reaches a predetermined value a counter is incremented by one. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK
ENGINE MECHANICAL CONDITION
AGING O2 SENSOR
CATALYTIC CONVERTER

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set. Review the repair history of the vehicle before continuing.

**Note:** If an O2 Sensor DTC set along with the Catalytic Converter Efficiency DTC diagnose the O2 Sensor DTC(s) before continuing.

**Note:** Check for contaminants that may have damaged the O2 Sensor and Catalytic Converter: contaminated fuel, unapproved silicone, oil and coolant, repair necessary.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0420-CATALYST 1/1 EFFICIENCY (CONTINUED)****2. VISUALLY INSPECT CATALYTIC CONVERTER**

Inspect the Catalytic Converter for the following damage.

Damage Catalytic Converter, dents or holes.

Severe discoloration caused by overheating the Catalytic Converter.

Catalytic Converter broke internally.

Leaking Catalytic Converter.

**Were any problems found?**

**Yes** >> Replace the Catalytic Converter. Repair the condition that may have caused the failure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. EXHAUST LEAK**

Start the engine.

Inspect the exhaust for leaks between the engine and the 1/1 O2 Sensor.

Inspect the exhaust for leaks between the engine and the 1/2 O2 Sensor.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. ENGINE MECHANICAL CONDITION**

Check the exhaust for excessive smoke caused by an internal problem in the engine.

**Is an engine mechanical condition present?**

**Yes** >> Repair the engine mechanical condition as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. AGING O2 SENSOR**

A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set.

Review the vehicles repair history.

**Has the rear O2 Sensor been replaced without replacing the front O2 Sensor?**

**Yes** >> Replace the Front O2 Sensor as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**P0420-CATALYST 1/1 EFFICIENCY (CONTINUED)**

**6. CATALYTIC CONVERTER**

**If there are no possible cause remaining, view repair.**

**Repair**

Replace the Catalytic Converter.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0430-CATALYST 2/1 EFFICIENCY

**P0430-CATALYST 2/1 EFFICIENCY (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

After engine warm up to 147 deg. F, 180 seconds of open throttle operation, at a speed greater than 20 mph, with the engine at 1200-1700 rpm and MAP vacuum between 15.0 and 21.0 inches of mercury (Hg).

- **Set Condition:**

As catalyst efficiency deteriorates, the switch rate of the downstream O2 sensor approaches that of the upstream O2 sensor. If at any point during the test the switch ratio reaches a predetermined value a counter is incremented by one. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK
ENGINE MECHANICAL CONDITION
AGING O2 SENSOR
CATALYTIC CONVERTER

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set. Review the repair history of the vehicle before continuing.

**Note:** If an O2 Sensor DTC set along with the Catalytic Converter Efficiency DTC diagnose the O2 Sensor DTC(s) before continuing.

**Note:** Check for contaminants that may have damaged the O2 Sensor and Catalytic Converter: contaminated fuel, unapproved silicone, oil and coolant, repair necessary.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER

- 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0430-CATALYST 2/1 EFFICIENCY (CONTINUED)****2. VISUALLY INSPECT CATALYTIC CONVERTER**

Inspect the Catalytic Converter for the following damage.

Damage Catalytic Converter, dents or holes.

Severe discoloration caused by overheating the Catalytic Converter.

Catalytic Converter broke internally.

Leaking Catalytic Converter.

**Were any problems found?**

- Yes** >> Replace the Catalytic Converter. Repair the condition that may have caused the failure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 3
- 

**3. EXHAUST LEAK**

Start the engine.

Inspect the exhaust for leaks between the engine and the 2/1 O2 Sensor.

Inspect the exhaust for leaks between the engine and the 2/2 O2 Sensor.

**Are there any exhaust leaks?**

- Yes** >> Repair or replace the leaking exhaust parts as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 4
- 

**4. ENGINE MECHANICAL CONDITION**

Check the exhaust for excessive smoke caused by an internal problem in the engine.

**Is an engine mechanical condition present?**

- Yes** >> Repair the engine mechanical condition as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 5
- 

**5. AGING O2 SENSOR**

A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set.

Review the vehicles repair history.

**Has the rear O2 Sensor been replaced without replacing the front O2 Sensor?**

- Yes** >> Replace the 2/1 O2 Sensor as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 6
-

**P0430-CATALYST 2/1 EFFICIENCY (CONTINUED)**

**6. CATALYTIC CONVERTER**

**If there are no possible cause remaining, view repair.**

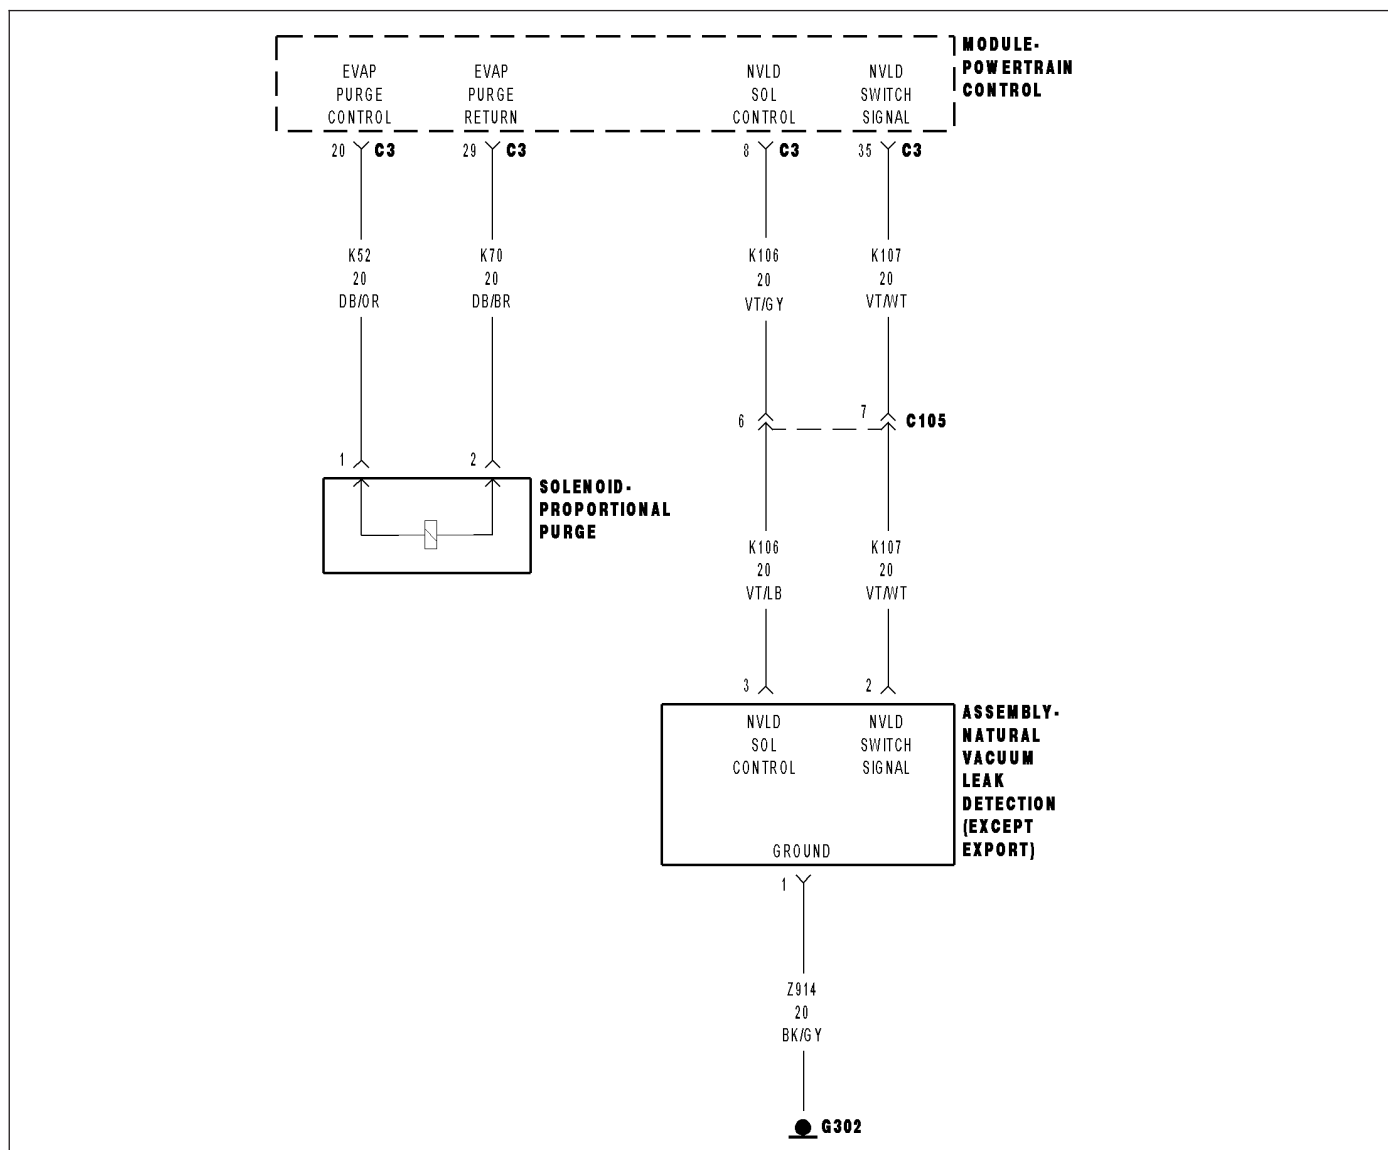

**Repair**

Replace the Catalytic Converter.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0440-GENERAL EVAP SYSTEM FAILURE

**P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine Running. Fuel Level greater than 12%. Ambient Temperature between 4°C and 32°C (39°F and 89°F).

- **Set Condition:**

The PCM does not see the NVLD switch close during the medium/large leak test. The PCM then will increase the vacuum supply to the EVAP system by increasing flow through the EVAP Purge valve. If the switch does not close with an increase in vacuum an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EVAP PURGE SOLENOID VACUUM SUPPLY (Z914) GROUND CIRCUIT OPEN (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN EVAPORATIVE EMISSION LEAK DETECTION NVLD ASSEMBLY EVAP PURGE SOLENOID PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

**Note:** If any of the following DTCs are set (P0443, P0452, P0453, P0498 or P0499) diagnose them first before continuing with P0440.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)****2. VISUAL AND PHYSICAL INSPECTION**

Turn the ignition off.

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the following conditions:

- Hoses disconnected or left off
- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap left off or bad gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. EVAP VACUUM SUPPLY HOSE INSPECTION**

Carefully inspect the Evap Purge Solenoid vacuum supply hose for proper routing.

Check for a pinched or plugged hose from the throttle body to the Purge Solenoid.

Make sure the vacuum port at the throttle body is free from any blockage.

**Were any problems found?**

**Yes** >> Repair the vacuum supply, hose/tube as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. CHECKING EVAP PURGE SOLENOID FUNCTIONALITY**

Disconnect the vacuum supply hoses from the EVAP Purge Solenoid.

Using a hand vacuum pump, apply 10 in Hg to the "CAN" side of the EVAP Purge Solenoid.

Ignition on, engine not running.

Observe the vacuum gauge.

With the scan tool, actuate the EVAP Purge Solenoid.

**Does the vacuum drop when the solenoid is actuated?**

**Yes** >> Go To 5

**No** >> Replace the Evap Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)****5. NVLD SWITCH OPERATION**

Connect the previously disconnected vacuum hose.

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch state.

**Note:** As the test runs, the NVLD Switch should go from an OPEN state to a CLOSED state and then return to OPEN when the test is complete.

**Did the NVLD Switch operate as described above?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**6. VERIFY EVAPORATIVE EMISSION LEAK**

To continue testing you will need Miller Tool #8404 Evaporative Emission Leak Detector (EELD).

**WARNING:** Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.

**Note:** The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.

Connect the red power lead of EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the EVAP Canister.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the .040 orifice on the tester's control panel.

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute.

Install the service port adapter #8404-14 on the vehicle's service port (if equipped) or install the #8404-ADP into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 7

**No** >> Go To 8

---

**P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)****7. EVAPORATIVE EMISSION LEAK DETECTION**

**Note:** A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may aid diagnosis also.

To continue testing, you will need Miller Tool #8404 Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port or the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**Note:** The flow meter indicator ball will not move at this point.

Press the remote smoke/air start button.

**Note:** Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.

**Note:** For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that are left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**Note:** Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke or dye may or may not be visible. Introducing smoke into the filtered side of the canister may assist in locating the leak.

**Was a leak found?**

**Yes** >> Repair or replace the leaking component as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 11

---

**P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)****8. NVLD ASSEMBLY**

Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Check connectors - Clean/repair as necessary.

Ignition on, engine not running.

Connect a jumper wire between the (K107) NVLD Switch Signal circuit and the (Z914) Ground circuit in the NVLD electrical harness connector.

Monitor the NVLD Switch state on the scan tool.

**Note: Remove the jumper wire before continuing.**

**Does the Switch change from OPEN to CLOSED when the jumper wire is installed?**

**Yes** >> Replace the NVLD Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**Note: Remove the jumper wire before continuing.**

**9. (Z914) GROUND CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance between the (Z914) Ground circuit and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the open in the (Z914) Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0440-GENERAL EVAP SYSTEM FAILURE (CONTINUED)

### 10. (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K107) NVLD Switch Signal circuit from the NVLD electrical harness connector to the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 11

**No** >> Repair the open in the (K107) Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 11. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

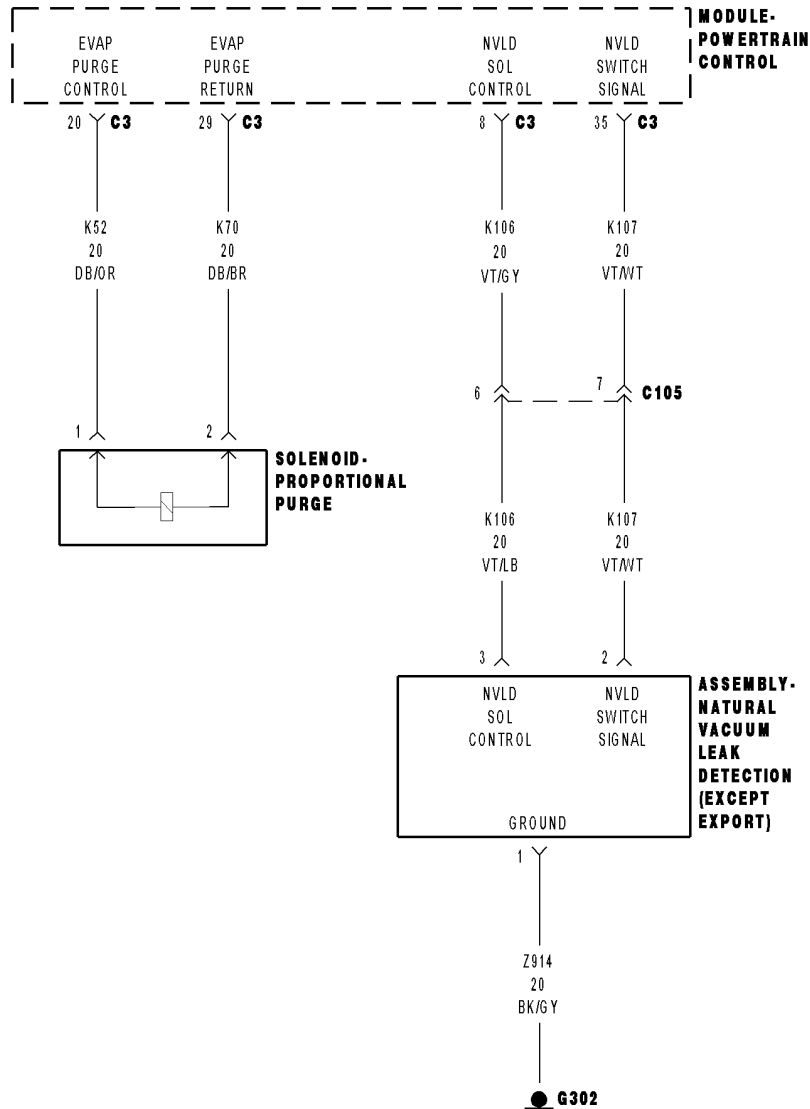

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0441-EVAP PURGE SYSTEM PERFORMANCE

**P0441-EVAP PURGE SYSTEM PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Cold start test. Engine Running. Small Leak Test Passed.

- **Set Condition:**

The PCM activates the EVAP Purge solenoid gradually increases to maximum flow. During flow, the PCM looks for the NVLD switch to close. If the PCM does not see the NVLD switch close at maximum flow an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EVAP PURGE SOLENOID VACUUM SUPPLY
EVAP PURGE SOLENOID

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** If any of the following DTCs are set (P0443, P0452, P0453, P0498 or P0499) diagnose them first before continuing with P0441.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0441-EVAP PURGE SYSTEM PERFORMANCE (CONTINUED)****2. CHECKING EVAP PURGE SOLENOID FUNCTIONALITY**

**Note:** After disconnecting the Evap Purge vacuum connections, inspect the lines and solenoid for any signs of contamination or foreign materials.

Using a hand vacuum pump, apply 10 in Hg to "CAN" side of the EVAP Purge Solenoid.

Ignition on, engine not running.

Observe the vacuum gauge.

With the scan tool, actuate the EVAP Purge Solenoid.

**Does the vacuum drop when the solenoid is actuated?**

**Yes** >> Go To 3

**No** >> Replace the Evap Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**Note:** Remove the vacuum gauge before continuing.

---

**3. EVAP VACUUM SUPPLY HOSE INSPECTION**

Turn the ignition off.

Carefully inspect the Evap Purge Solenoid vacuum supply hose for proper routing.

Check for a pinched or plugged hose from the throttle body to the Purge Solenoid.

Inspect the vacuum port at the throttle body for any damage or plugging.

**Were any problems found?**

**Yes** >> Repair the vacuum supply hose/tube as necessary.

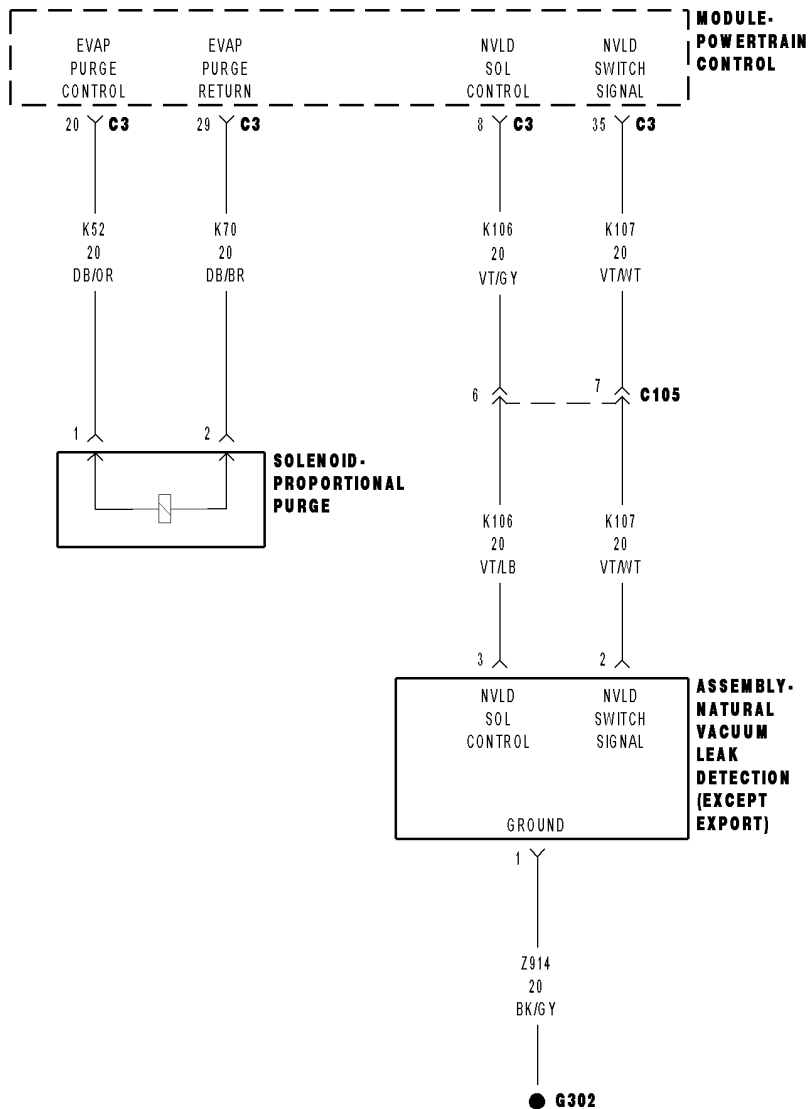

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0442-EVAP PURGE SYSTEM MEDIUM LEAK

**P0442-EVAP PURGE SYSTEM MEDIUM LEAK (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine Running. Cold start test. Fuel Level greater than 12%. Ambient Temperature between 4°C and 32°C (39°F and 89°F) Close Loop fuel system. Test runs when small leak test is maturing.

- **Set Condition:**

The PCM activates the EVAP Purge Solenoid to pull the EVAP system into a vacuum to close the NVLD switch. Once the NVLD switch is closed, the PCM turns the EVAP Purge solenoid off to seal the EVAP system. If the NVLD switch reopens before the calibrated amount of time for a Medium leak an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EVAP PURGE SYSTEM LEAK
EVAP PURGE SOLENOID
NVLD SWITCH

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Since a hot vehicle can conceal a leak, it is best to perform this test at room temperature.

**Note:** A loose gas cap could have caused this DTC to set. Make sure gas cap is tight and in good condition. Make sure the gas cap meets OEM specifications.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0442-EVAP PURGE SYSTEM MEDIUM LEAK (CONTINUED)****2. VISUAL AND PHYSICAL INSPECTION**

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the follow conditions:

- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. VERIFY EVAPORATIVE EMISSION LEAK**

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**Note: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**Note: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 4

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0442-EVAP PURGE SYSTEM MEDIUM LEAK (CONTINUED)****4. EVAPORATIVE EMISSION LEAK DETECTION**

**Note:** A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may also aid diagnosis.

To continue testing, you will need Miller Tool #8404A Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port (if equipped) or from the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**Note:** The flow meter indicator ball will not move in the smoke mode.

Press the remote smoke/air start button.

**Note:** Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.

**Note:** For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**Note:** Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke may not be as thick. Introducing smoke into the filtered side of the canister may assist in locating the leak.

**Was a leak found?**

**Yes** >> Repair or replace the leaking component as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. EVAP PURGE SOLENOID OPERATION**

**Note:** After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty vent valve. Replace/repair as necessary.

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in Hg to the "CAN" of the EVAP Purge Solenoid.

**Note:** Monitor the vacuum gauge for at least 15 seconds.

**Does the EVAP Purge Solenoid hold vacuum?**

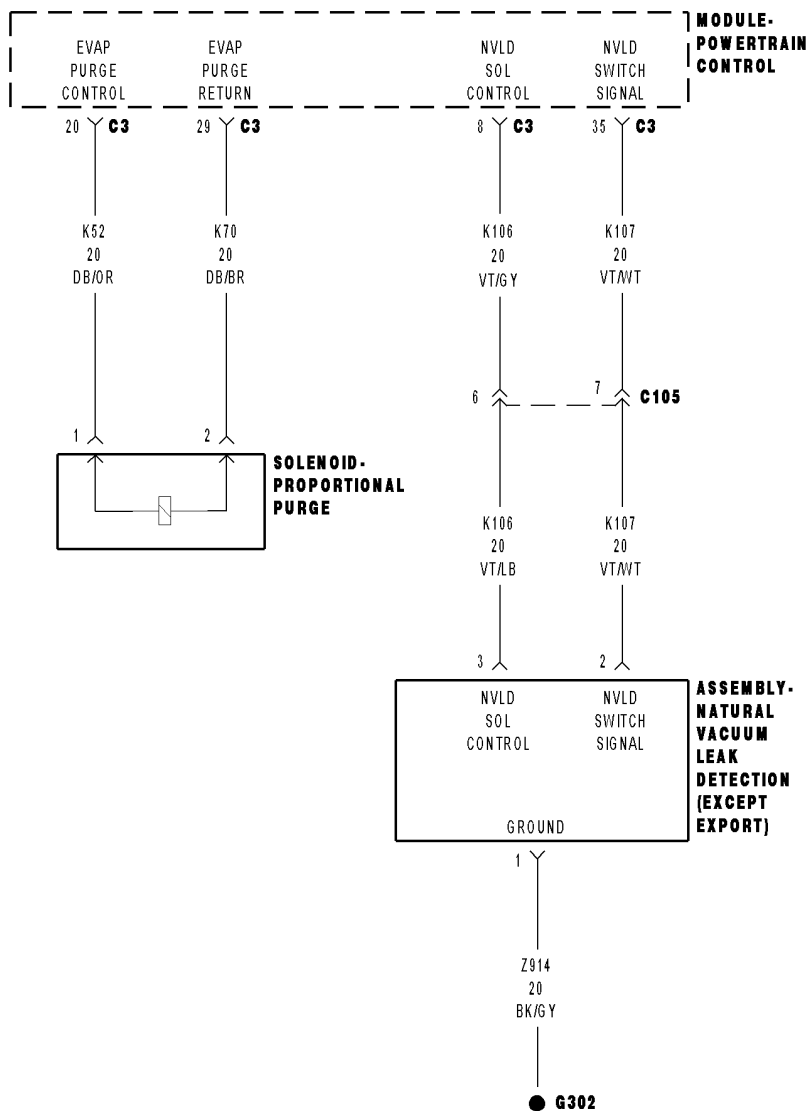

**Yes** >> Test Complete.

**No** >> Replace the Evap Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0443-EVAP PURGE SOLENOID CIRCUIT

**P0443-EVAP PURGE SOLENOID CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

The ignition on or engine running. Battery voltage greater than 10 volts.

- **Set Condition:**

The PCM will set a trouble code if the actual state of the solenoid does not match the intended state. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K52) EVAP PURGE CONTROL CIRCUIT OPEN
(K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND
(K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT OPEN
(K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT SHORTED TO GROUND
EVAP PURGE SOLENOID
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0443-EVAP PURGE SOLENOID CIRCUIT (CONTINUED)

### 2. EVAP PURGE SOLENOID OPERATION

Turn the ignition off.

Disconnect the EVAP Purge Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, jump across the (K52) Evap Purge Solenoid Control circuit and (K70) Evap Purge Solenoid Return circuit in the EVAP Purge Solenoid harness connector.

With a scan tool, actuate the EVAP Purge Solenoid.

**Does the test light flash on and off?**

**Yes** >> Replace the EVAP Purge Solenoid.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K52) Evap Purge Solenoid Control circuit from the Evap Purge Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K52) EVAP Purge Solenoid Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0443-EVAP PURGE SOLENOID CIRCUIT (CONTINUED)****4. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K52) Evap Purge Solenoid Control circuit in the Evap Purge Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K52) EVAP Purge Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K70) EVAP PURGE SOLENOID RETURN CIRCUIT OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K70) Evap Purge Solenoid Return circuit from the EVAP Purge Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K70) Evap Purge Solenoid Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0443-EVAP PURGE SOLENOID CIRCUIT (CONTINUED)****6. (K70) EVAP PURGE SOLENOID RETURN CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K70) Evap Purge Solenoid Return circuit in the Evap Purge Solenoid harness connector.

**Is the resistance below 100 ohms?**

- Yes** >> Repair the short to ground in the (K70) Evap Purge Solenoid Return circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
- No** >> Go To 7

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0452-NVLD PRESSURE SWITCH STUCK CLOSED**

### P0452-NVLD PRESSURE SWITCH STUCK CLOSED (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 Immediately after the engine has been started.
- Set Condition:**  
 The PCM activates the NLVD Solenoid. If PCM does not see NVLD switch open an error is detected. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO GROUND NVLD ASSEMBLY EVAP PURGE SOLENOID PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.  
 With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0452-NVLD PRESSURE SWITCH STUCK CLOSED (CONTINUED)****2. EVAP PURGE SOLENOID OPERATION**

Turn the ignition off.

Disconnect the EVAP Purge Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, jump across the Evap Purge Solenoid harness connector.

With the scan tool, actuate the EVAP Purge Solenoid.

**Does the test light flash on and off?**

**Yes** >> Go To 3

**No** >> Go To 7

**3. EVAP PURGE SOLENOID LEAKS/STUCK OPEN**

Turn the ignition off.

Connect the Evap Purge Solenoid harness connector.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

**Note:** After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a fault vent valve. Replace/repair as necessary.

Using a hand vacuum pump, apply 10 in Hg to the "CAN" of the EVAP Purge Solenoid.

**Note:** Monitor the vacuum gauge for at least 15 seconds.

**Does the EVAP Purge Solenoid hold vacuum?**

**Yes** >> Go To 4

**No** >> Replace the Evap Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**4. NVLD SWITCH OPERATION**

Ignition on, engine not running.

Using the scan tool, monitor the NVLD Switch State with the vacuum pump still installed and holding vacuum.

**Does the scan tool display the NVLD state OPEN?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the vacuum pump and connect the vacuum hose before continuing.

**P0452-NVLD PRESSURE SWITCH STUCK CLOSED (CONTINUED)****5. NVLD ASSEMBLY**

Disconnect the NVLD electrical connector.

**Does the Switch change from CLOSED to OPEN?**

**Yes** >> Replace the NVLD Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K107) NVLD Switch Signal circuit in the NVLD Assembly harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K107) NVLD Switch Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**7. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K52) Evap Purge Solenoid Control circuit in the EVAP Purge Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K52) Evap Purge Sol Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0452-NVLD PRESSURE SWITCH STUCK CLOSED (CONTINUED)****8. PCM**

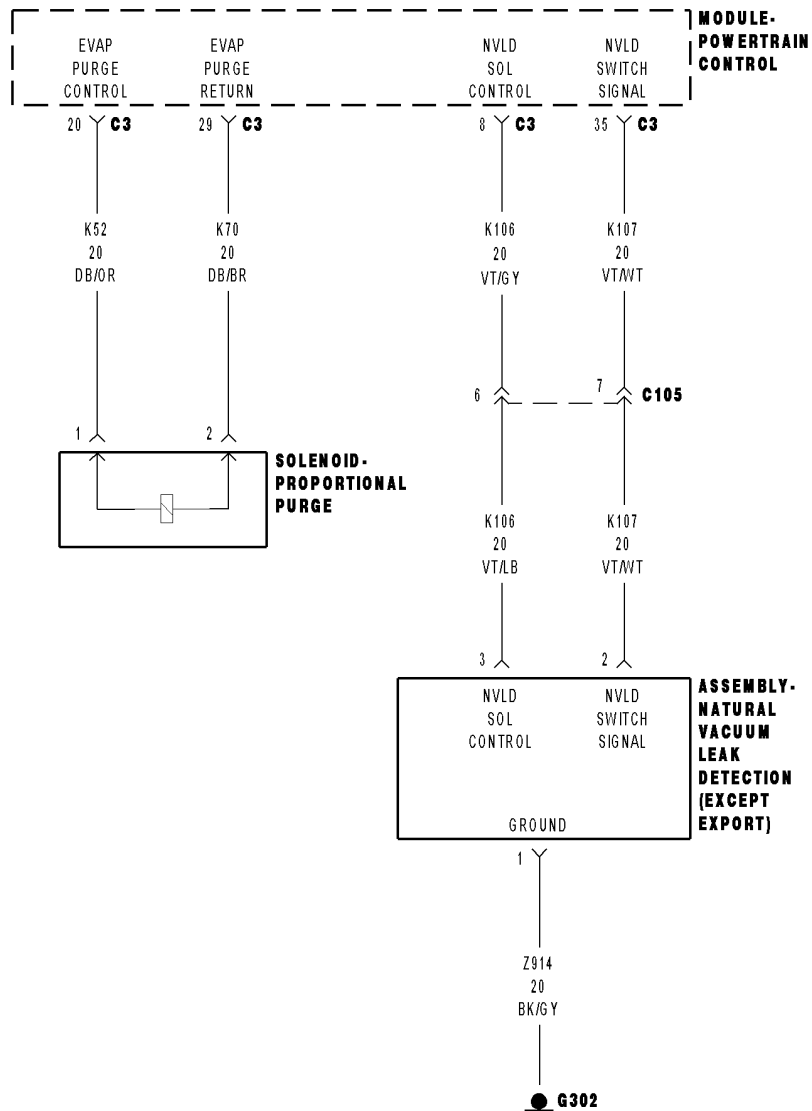

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

## P0453-NVLD PRESSURE SWITCH STUCK OPEN

**P0453-NVLD PRESSURE SWITCH STUCK OPEN (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running.

- **Set Condition:**

If the PCM does not see the NVLD switch close during test an error is detected. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K107) NVLD SWITCH SIGNAL CIRCUIT OPEN
(K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO (K106) NVLD SOLENOID CONTROL CIRCUIT
(Z914) GROUND CIRCUIT OPEN
NVLD ASSEMBLY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. NVLD SWITCH OPERATION

Start the engine.

Allow the engine to idle.

Using a scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch state.

**Note:** As the test runs, the NVLD Switch should go from an **OPEN** state to a **CLOSED** state and then return to **OPEN** when the test is complete.

**Did the NVLD Switch operate as described above?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 2

## P0453-NVLD PRESSURE SWITCH STUCK OPEN (CONTINUED)

### 2. NVLD ASSEMBLY

Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Ignition on, engine not running.

Monitor the NVLD Switch state on the scan tool.

Connect a jumper wire between the (K107) NVLD Switch Signal circuit and the (Z914) Ground circuit in the NVLD harness connector.

**Does the Switch change from OPEN to CLOSED with the jumper wire installed?**

**Yes** >> Replace the NVLD Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

### 3. (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K107) NVLD Switch Signal circuit in the NVLD electrical harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K107) NVLD Switch Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0453-NVLD PRESSURE SWITCH STUCK OPEN (CONTINUED)****4. (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K107) NVLD Switch Signal circuit from the NVLD electrical harness connector to the appropriate terminal of special tool # 8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K107) NVLD Switch Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO THE (K106) NVLD SOLENOID CONTROL CIRCUIT**

Measure the resistance between the (K107) NVLD Switch Signal circuit and the (K106) NVLD Solenoid Control circuit in the NVLD electrical harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K107) NVLD Switch Signal circuit and the (K106) NVLD Solenoid Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0453-NVLD PRESSURE SWITCH STUCK OPEN (CONTINUED)****6. (Z914) GROUND CIRCUIT OPEN**

Measure the resistance between the (Z914) Ground circuit and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z914) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0455-EVAP PURGE SYSTEM LARGE LEAK

**P0455-EVAP PURGE SYSTEM LARGE LEAK (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine Running. Cold start test. Fuel Level greater than 12%. Ambient Temperature between 4°C and 32°C (39°F and 89°F) Close Loop fuel system. Test runs when small leak test is maturing.

- **Set Condition:**

The PCM activates the EVAP Purge Solenoid to pull the EVAP system into a vacuum to close the NVLD switch. Once the NVLD switch is closed, the PCM turns the EVAP Purge solenoid off to seal the EVAP system. If the NVLD switch reopens before the calibrated amount of time for a Large leak an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EVAP PURGE SYSTEM LEAK
EVAP PURGE SOLENOID
NVLD SWITCH

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Check for any related TSBs before continuing.

**Note:** Since a hot vehicle can conceal a leak, it is best to perform this test at room temperature.

**Note:** A loose gas cap could have caused this DTC to set. Make sure gas cap is tight and in good condition. Ensure the gas cap meets OEM specifications.

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0455-EVAP PURGE SYSTEM LARGE LEAK (CONTINUED)****2. VISUAL AND PHYSICAL INSPECTION**

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the follow conditions:

- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. VERIFY EVAPORATIVE EMISSION LEAK**

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**Note: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**Note: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 4

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0455-EVAP PURGE SYSTEM LARGE LEAK (CONTINUED)****4. EVAPORATIVE EMISSION LEAK DETECTION**

**Note:** A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may aid diagnosis also.

To continue testing, you will need Miller Tool #8404A Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port (if equipped) or from the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**Note:** The flow meter indicator ball will not move in the smoke mode.

Press the remote smoke/air start button.

**Note:** Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.

**Note:** For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**Note:** Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke may not be as thick. Introducing smoke into the filtered side of the canister may assist in locating the leak.

**Was a leak found?**

**Yes** >> Repair or replace the leaking component as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. EVAP PURGE SOLENOID OPERATION**

**Note:** After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty vent valve. Replace/repair as necessary.

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in Hg to the "CAN" of the EVAP Purge Solenoid.

**Note:** Monitor the vacuum gauge for at least 15 seconds.

**Does the EVAP Purge Solenoid hold vacuum?**

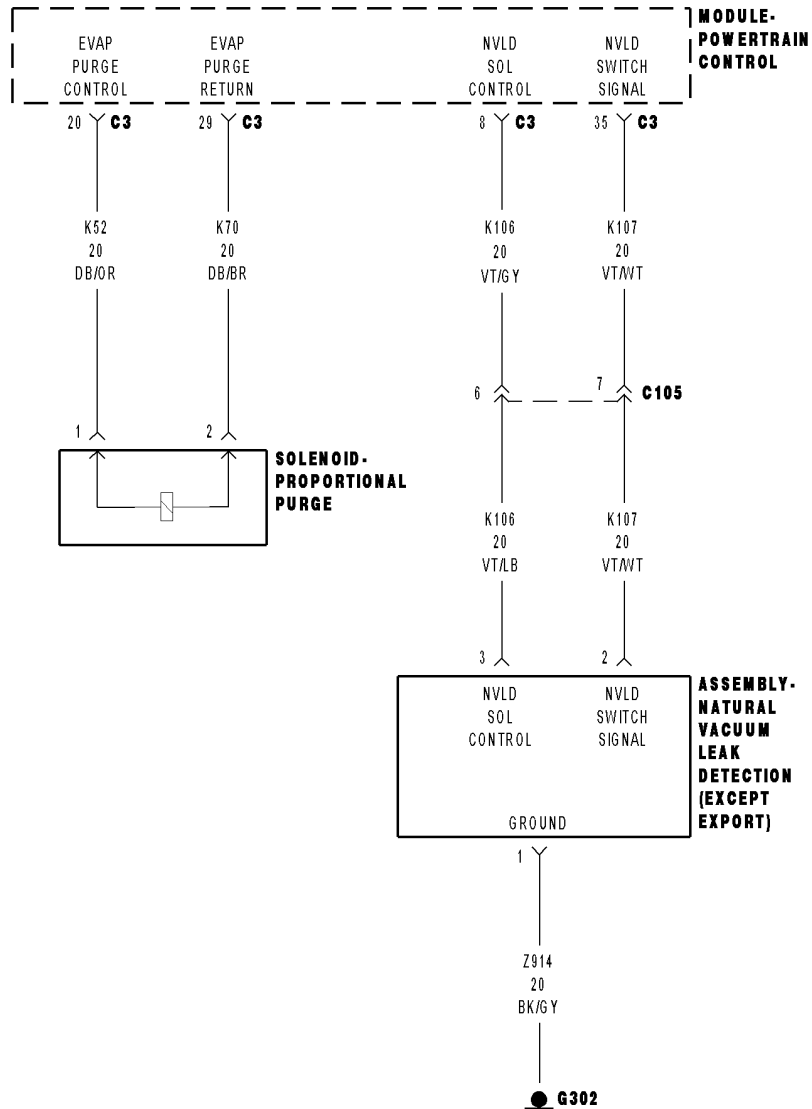

**Yes** >> Test Complete.

**No** >> Replace the Evap Purge Solenoid.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0456-EVAP PURGE SYSTEM SMALL LEAK

P0456-EVAP PURGE SYSTEM SMALL LEAK (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 Ignition off. Fuel Level less than 88%. Ambient Temperature between 4°C and 43°C (39°F and 109°F) Close Loop fuel system.
- Set Condition:**  
 Due to temperature changes, a vacuum is created in the fuel tank and EVAP system. With the EVAP system sealed, the PCM monitors the NVLD switch. If the NVLD switch does not close within a calibrated time allowance, an error is detected by the PCM. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EVAP PURGE SYSTEM LEAK
EVAP PURGE SOLENOID

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

**Note:** Since a hot vehicle can conceal a leak, it is best to perform this test at room temperature.

**Note:** A loose gas cap could have caused this DTC to set. Make sure gas cap is tight and in good condition. Make sure the gas cap meets OEM specifications.

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0456-EVAP PURGE SYSTEM SMALL LEAK (CONTINUED)****2. VISUAL AND PHYSICAL INSPECTION**

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the follow conditions:

- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. VERIFY EVAPORATIVE EMISSION LEAK**

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**Note: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**Note: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 4

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**P0456-EVAP PURGE SYSTEM SMALL LEAK (CONTINUED)****4. EVAPORATIVE EMISSION LEAK DETECTION**

**Note:** A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may also aid diagnosis.

To continue testing, you will need Miller Tool #8404A Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port (if equipped) or from the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**Note:** The flow meter indicator ball will not move in the smoke mode.

Press the remote smoke/air start button.

**Note:** Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.

**Note:** For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**Note:** Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke may not be as thick. Introducing smoke into the filtered side of the canister may assist in locating the leak.

**Was a leak found?**

**Yes** >> Repair or replace the leaking component as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. EVAP PURGE SOLENOID OPERATION**

**Note:** After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty vent valve. Replace/repair as necessary.

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in Hg to the "CAN" of the EVAP Purge Solenoid.

**Note:** Monitor the vacuum gauge for at least 15 seconds.

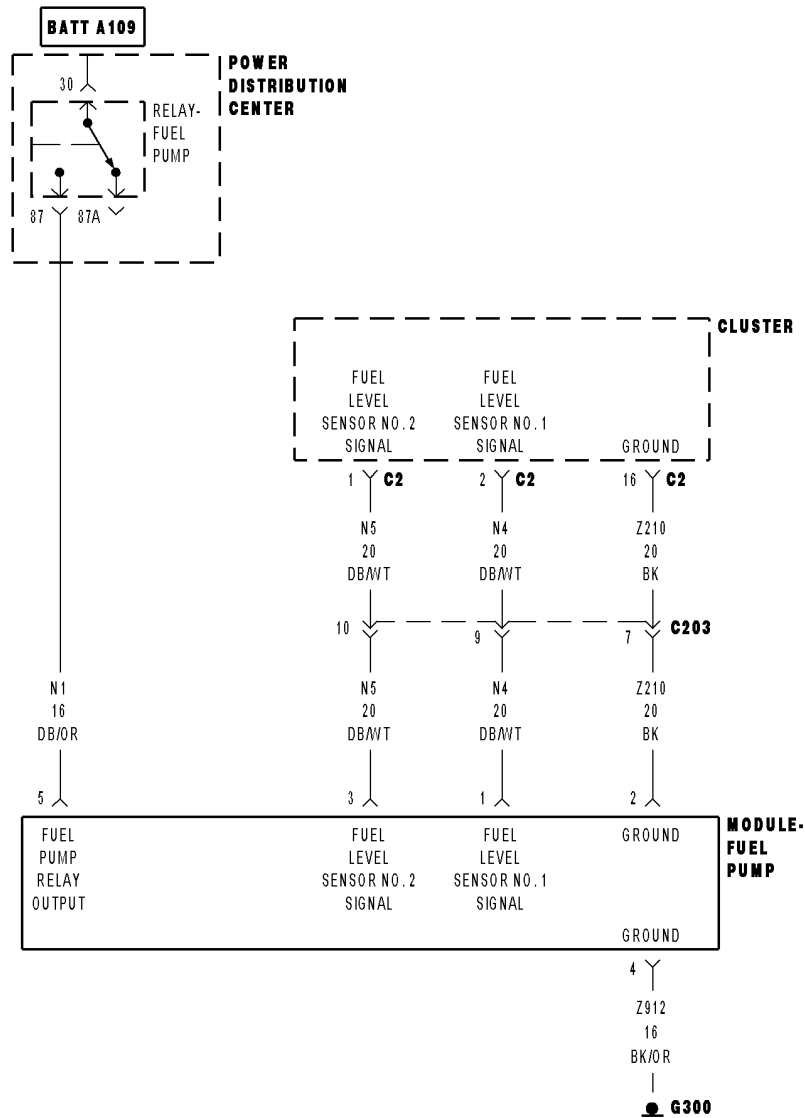

**Does the EVAP Purge Solenoid hold vacuum?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace the Evap Purge Solenoid.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 6.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0461-FUEL LEVEL SENSOR 1 PERFORMANCE

**P0461-FUEL LEVEL SENSOR 1 PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

TEST No.1: With the ignition on, the fuel level is compared to the previous key down after a 20 second delay.

TEST No.2: The PCM monitors the fuel level at ignition on.

- **Set Condition:**

TEST No.1: If the PCM does not see a difference in fuel level of greater than 0.1 volt the test will fail. TEST

No.2: If the PCM does not see a change in the fuel level of .1765 over a set amount of miles the test will fail.

Three good trips to turn off the MIL.

Possible Causes
(N4) FUEL LEVEL SIGNAL CIRCUIT OPEN
(N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND
(Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN
FUEL TANK
FUEL LEVEL SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Diagnose any CAN - C or CAN - B Communication DTCs before continuing.

**Note:** Diagnose P0462 or P0463 first, if set along with P0461.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. VISUALLY INSPECT FUEL TANK

Visually inspect the Fuel Tank for damage that may restrict the Fuel Sending Unit float from moving.

**Is the Fuel Tank OK?**

**Yes** >> Go To 3

**No** >> Replace the Fuel Tank as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0461-FUEL LEVEL SENSOR 1 PERFORMANCE (CONTINUED)****3. (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Disconnect the C2 Cluster harness connectors.

Measure the resistance of the (N4) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (N4) Fuel Level Signal circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**4. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (N4) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0461-FUEL LEVEL SENSOR 1 PERFORMANCE (CONTINUED)****5. (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (Z210) Fuel Level Sensor Ground circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (Z210) Fuel Level Sensor Ground circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. INTERNAL INSPECTION OF THE FUEL TANK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Tank per Service Information.

Remove the Fuel Pump Module.

Visually inspect the inside of the Fuel Tank for any obstructions or deformities.

Inspect the Fuel Pump Module Float arm for damage.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

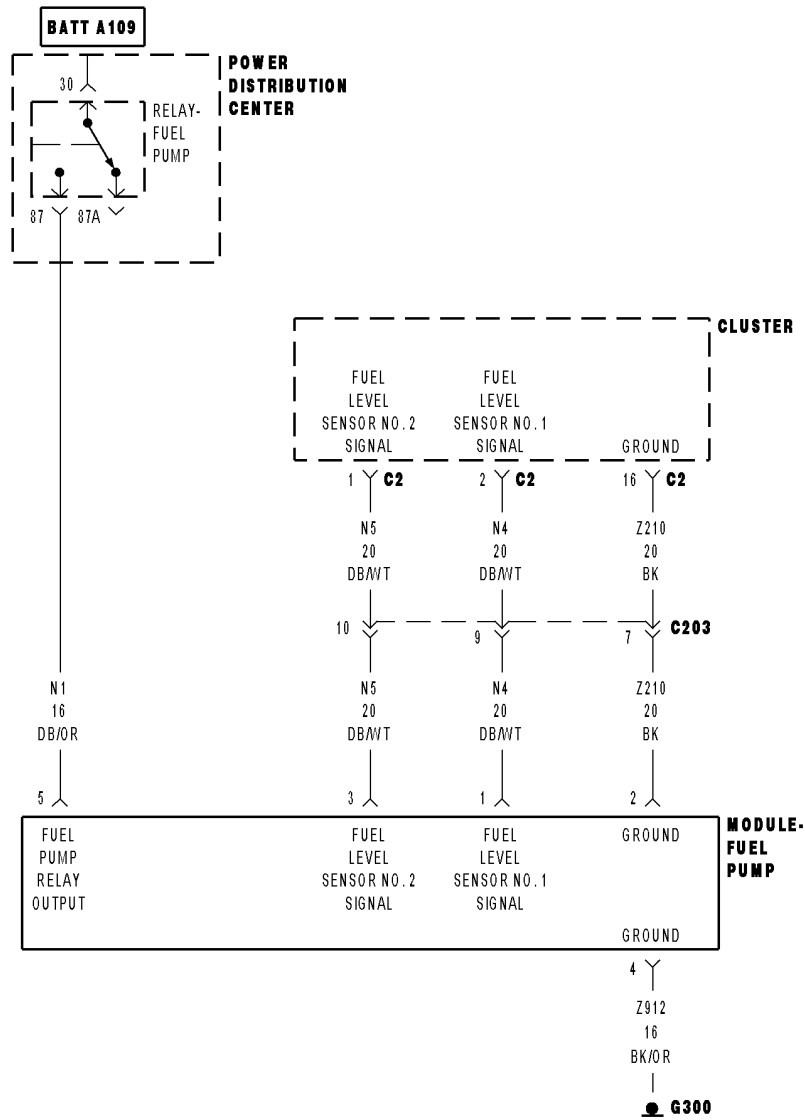

**7. FUEL LEVEL SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Level Sensor.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0462-FUEL LEVEL SENSOR 1 CIRCUIT LOW**

**P0462-FUEL LEVEL SENSOR 1 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage above 10.4 volts.
- **Set Condition:**  
The fuel level sensor signal voltage goes below 0.4 of a volt for more than 90 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO (Z210) FUEL LEVEL SENSOR RETURN CIRCUIT FUEL LEVEL SENSOR INSTRUMENT CLUSTER

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).**

**Diagnostic Test****1. FUEL LEVEL SENSOR VOLTAGE BELOW 0.4 OF A VOLT**

**Note:** Diagnose any CAN - B or CAN -C Communication DTCs before continuing.

Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage below 0.4 of a volt?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**2. FUEL LEVEL SENSOR**

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Did the Fuel Level Sensor voltage change from below 0.4 of a volt to above 4.0 volts?**

- Yes** >> Replace the Fuel Level Sensor.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 3

**P0462-FUEL LEVEL SENSOR 1 CIRCUIT LOW (CONTINUED)****3. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 Cluster harness connectors.

Measure the resistance between ground and the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (N4) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT**

Measure the resistance between the (N4) Fuel Level Signal circuit and the (Z210) Fuel Level Sensor Ground circuit in the Fuel Pump Module harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (Z210) Fuel Level Sensor Ground circuit and the (N4) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

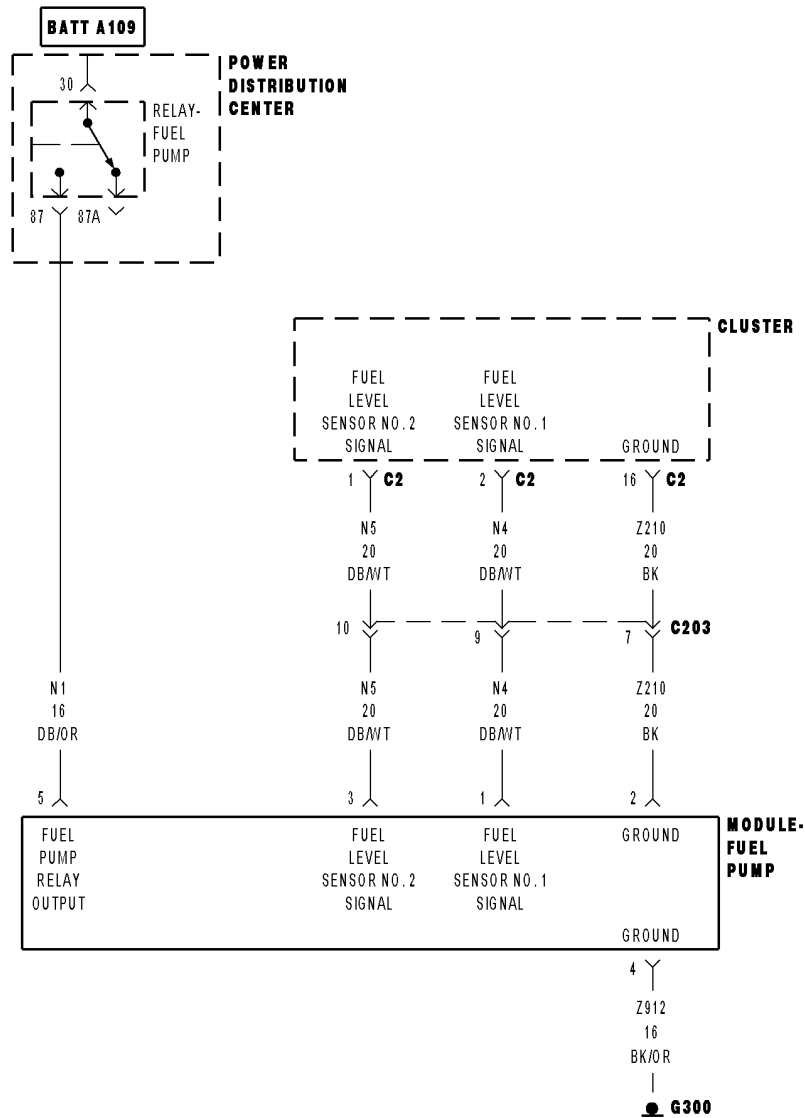

**P0462-FUEL LEVEL SENSOR 1 CIRCUIT LOW (CONTINUED)****5. INSTRUMENT CLUSTER**

**Note:** Before continuing, check the Instrument Cluster harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Instrument Cluster per Service Information.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
-

**P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH**

### P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 Ignition on and battery voltage above 10.4 volts.
- Set Condition:**  
 The fuel level sensor signal voltage at the PCM goes above 4.9 volts for more than 90 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN FUEL LEVEL SENSOR INSTRUMENT CLUSTER

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. FUEL LEVEL SENSOR VOLTS ABOVE 4.9 VOLTS

**Note:** Diagnose any CAN - B and CAN - C Communication DTCs before continuing.

Ignition on, engine not running.

With a scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage above 4.9 volts?**

- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH (CONTINUED)****2. FUEL LEVEL SENSOR**

Turn the ignition off.

Disconnect the Fuel Pump Module electrical harness connector.

Ignition on, engine not running.

Connect a jumper wire between the (N4) Fuel Level Signal circuit and the (Z210) Fuel Level Sensor Ground circuit in the Fuel Pump Module harness connector.

With the scan tool, read the Fuel Level Sensor voltage.

**Did the Fuel Level Sensor voltage change from above 4.8 volts to below 0.4 of a volt with the jumper wire installed?**

**Yes** >> Replace the Fuel Level Sensor.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the C2 Cluster harness connector.

Ignition on, engine not running.

Measure the voltage on the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (N4) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH (CONTINUED)****4. (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (N4) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (N4) Fuel Level Signal circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (Z210) Fuel Level Sensor Ground circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (Z210) Fuel Level Sensor Ground circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH (CONTINUED)****6. INSTRUMENT CLUSTER**

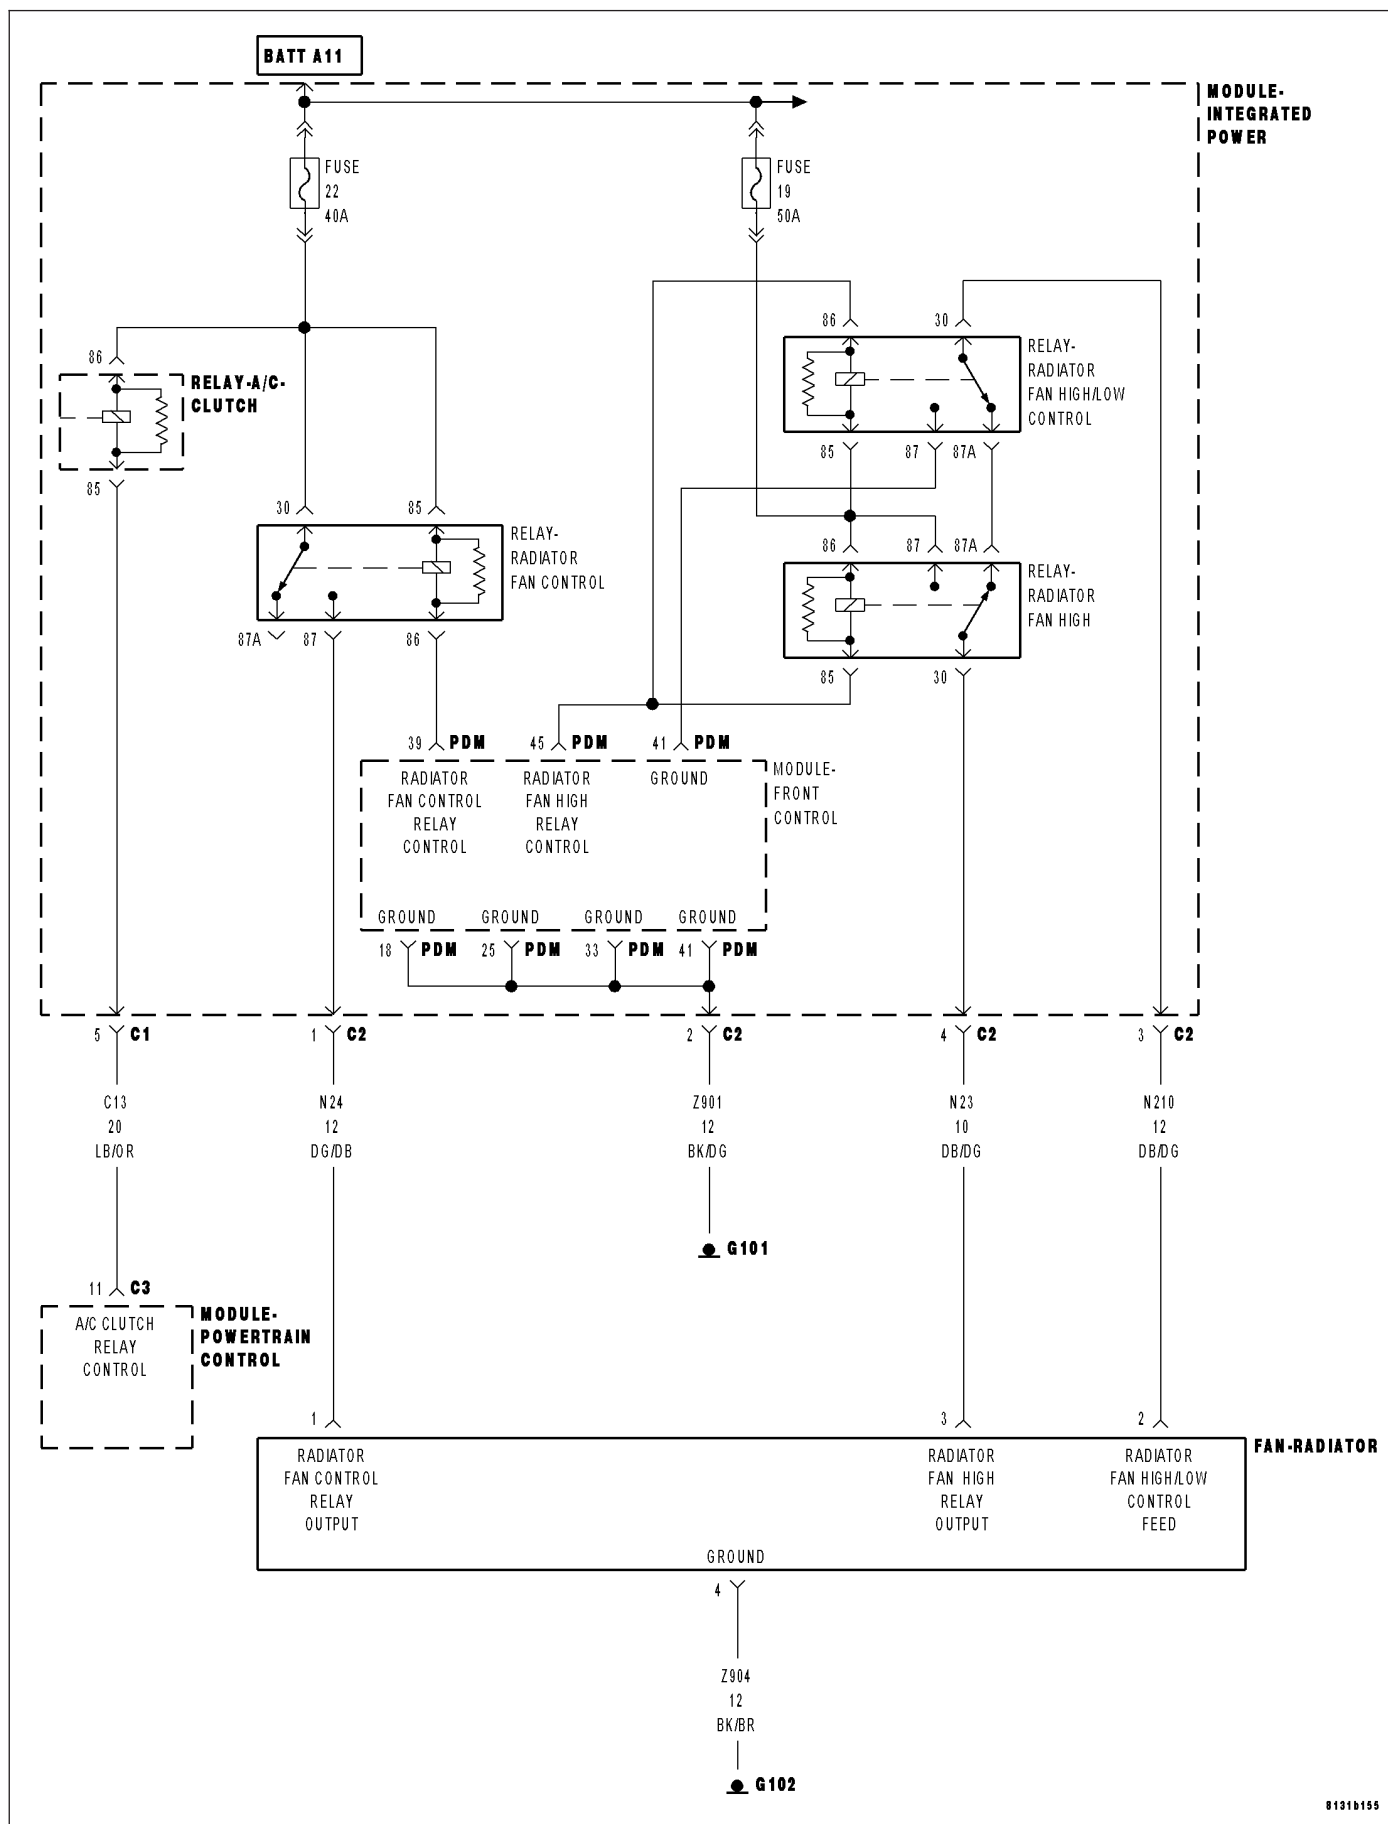

**Note:** Before continuing, check the Instrument Cluster harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**     >> Replace and program the Instrument Cluster per Service Information.  
          Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P0480-COOLING FAN 1 CONTROL CIRCUIT

**P0480-COOLING FAN 1 CONTROL CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
An open or shorted circuit is detected in the radiator fan relay control circuit. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(A201) FUSED (B+) FEED CIRCUITS (N201) RADIATOR FAN CONTROL RELAY CONTROL CIRCUIT OPEN (N201) RADIATOR FAN CONTROL RELAY CIRCUIT SHORT TO GROUND RADIATOR FAN CONTROL RELAY FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test**

**1. RADIATOR FAN CONTROL RELAY OPERATION**

**Note:** When actuating the radiator fan relays, the Radiator Fan(s) may have a delay in operation and ramp up slowly.

Ignition on, engine not running.

With a scan tool, select Radiator Cooling Fan Relay #1 Control State to actuate the Radiator Fan Control Relay.

**Is the Cooling Fan Relay operating?**

- Yes**

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**

>> Go To 2

## P0480-COOLING FAN 1 CONTROL CIRCUIT (CONTINUED)

### 2. (A201) FUSED B+ CIRCUITS

Turn the ignition off.

Remove the Radiator Fan Control Relay.

Using a 12-volt test light connected to ground, probe the (A201) Fused B+ circuits.

**Is the voltage above 11.0 volts?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A201) Fused B+ circuits. Inspect the related fuse and repair as necessary.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

### 3. RADIATOR FAN CONTROL RELAY CONTROL CIRCUIT

Turn the ignition on, engine not running.

With a scan tool, select Radiator Cooling Fan Relay #1 Control State, Toggle, to actuate the Radiator Fan Control Relay.

Using a 12-volt test light connected to battery voltage, probe the Radiator Control Relay Control circuit in the PDM.

**Does the test light illuminate and flash on and off?**

**Yes** >> Replace the Radiator Fan Control Relay.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0480-COOLING FAN 1 CONTROL CIRCUIT (CONTINUED)****4. (N201) RADIATOR FAN CONTROL RELAY CONTROL CIRCUIT OPEN**

Turn the ignition off.

Remove the FCM from the PDM.

Measure the resistance of the (N201) Radiator Fan Control Relay Control circuit from the Relay to the FCM PDM — 49 way connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Replace the PDM in accordance with the Service information.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (N201) RADIATOR FAN CONTROL RELAY CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (N201) Radiator Fan Control Relay Control circuit at the Relay connection.

**Is the resistance below 100 ohms?**

**Yes** >> Replace the PDM in accordance with the Service information.

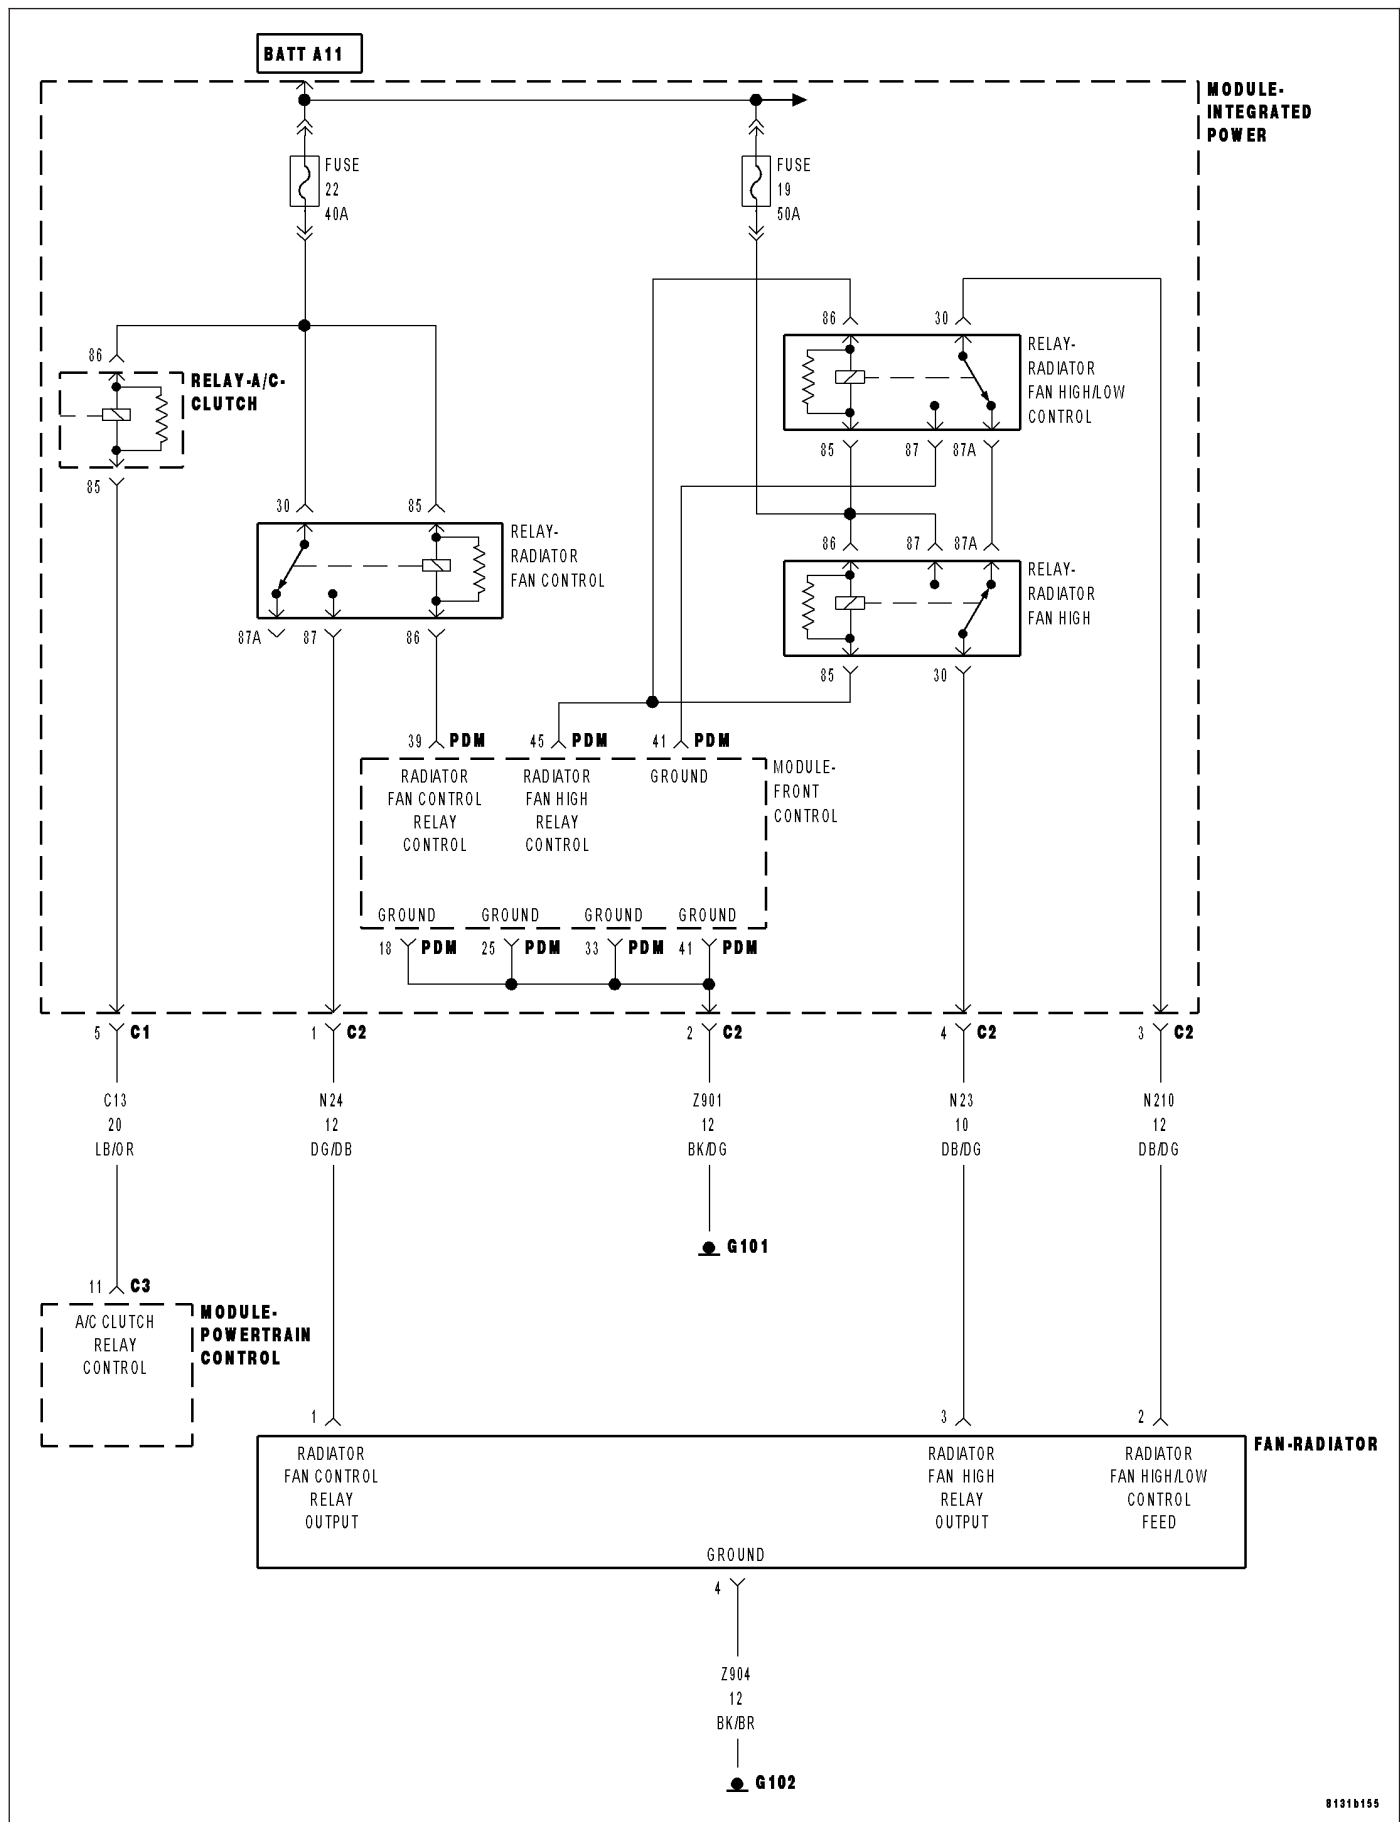

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace Front Control Module in accordance with the Service Information.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0481-COOLING FAN 2 CONTROL CIRCUIT

P0481-COOLING FAN 2 CONTROL CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
An open or shorted circuit is detected in the radiator fan relay control circuit. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(A16) FUSED B+ CIRCUITS (N112) RADIATOR FAN HIGH RELAY CONTROL CIRCUIT OPEN (N112) RADIATOR FAN HIGH RELAY CONTROL CIRCUIT SHORTED TO GROUND RADIATOR FAN HIGH RELAY FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

Diagnostic Test

1. RADIATOR FAN HIGH RELAY OPERATION

Ignition on, engine not running.

With a scan tool, select Radiator Cooling Fan Relay #2 Control State, to actuate the Radiator Fan High Relay.

- Is the Cooling Fan Relay operating?**
- Yes**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**    >> Go To 2

**P0481-COOLING FAN 2 CONTROL CIRCUIT (CONTINUED)****2. (A16) FUSED B+ CIRCUITS**

Turn the ignition off.

Remove the Radiator High Fan Relay.

Using a 12-volt test light connected to ground, probe the (A16) Fused B+ circuits in the Relay connection.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Go To 3

**3. RADIATOR FAN HI/LO CONTROL RELAY SHORTED INTERNALLY**

With the test light still at the (A16) Fused B+ circuit (Radiator High Fan Relay), remove the Radiator Fan HI/LO Control Relay.

**When the relay is removed, does the test light illuminate brightly?**

**Yes** >> Replace the Radiator Fan HI/LO Control Relay.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Repair the open or short to ground in the (A16) Fused B+ circuits. Inspect the related fuse and repair as necessary.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**4. RADIATOR FAN HIGH RELAY CONTROL CIRCUIT**

Turn the ignition on, engine not running.

With a scan tool, select Radiator Cooling Fan Relay #2 Control State and then Toggle, to actuate the Radiator Fan High Relay.

Using a 12-volt test light connected to battery voltage, probe the Radiator Fan High Relay Control circuit in the PDM.

**Does the test light illuminate and flash on and off?**

**Yes** >> Replace the Radiator Fan High Relay.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0481-COOLING FAN 2 CONTROL CIRCUIT (CONTINUED)****5. (N112) RADIATOR FAN HIGH RELAY CONTROL CIRCUIT OPEN**

Remove the FCM from the PDM.

Measure the resistance of the (N112) Radiator Fan High Relay Control circuit from the Relay connection to the FCM PDM — 49 way connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Replace the PDM in accordance with the Service Information.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. (N112) RADIATOR FAN HIGH RELAY CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (N112) Radiator Fan High Control circuit at the Relay connection.

**Is the resistance below 100 ohms?**

**Yes** >> Go To 7

**No** >> Replace the Front Control Module in accordance with the Service Information.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

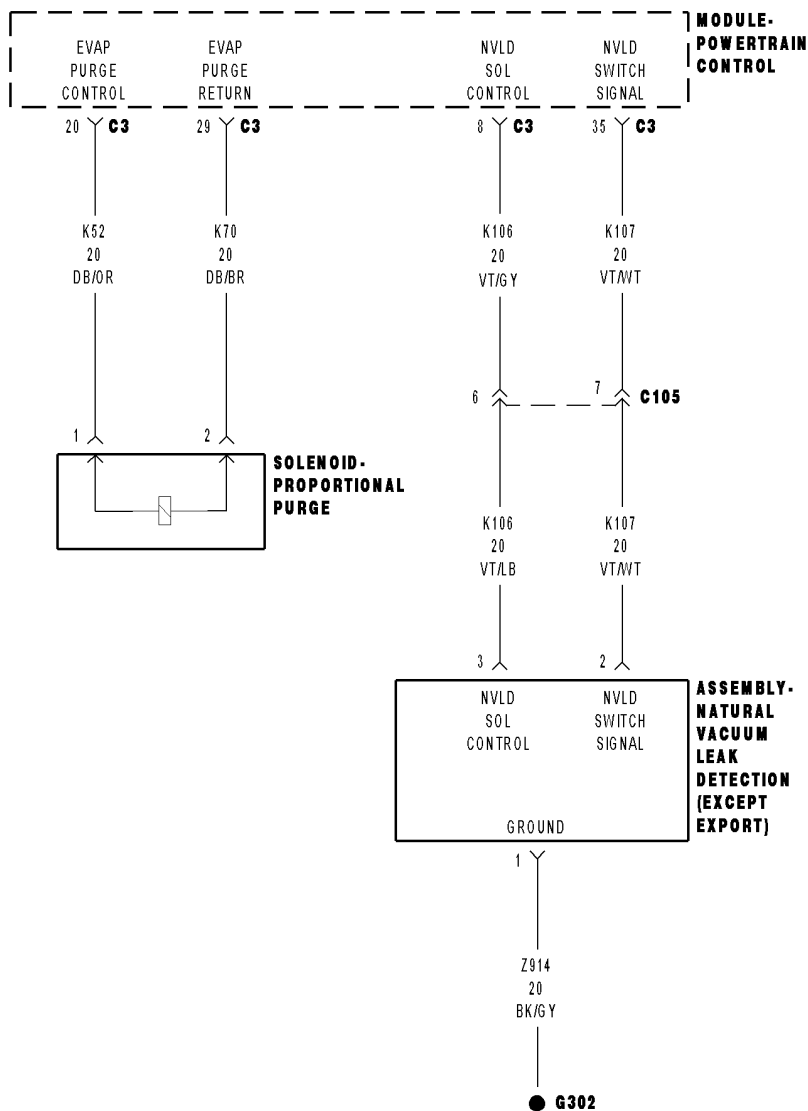

**P0481-COOLING FAN 2 CONTROL CIRCUIT (CONTINUED)****7. RADIATOR FAN HI/LO CONTROL RELAY SHORTED INTERNALLY**

With the probe still at the (N112) Radiator Fan High Control circuit, remove the Radiator Fan HI/LO Control Relay.

**Is the resistance still below 100 ohms?**

- Yes** >> Repair the open or short to ground in the (N112) Radiator Fan High Control circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace the Radiator Fan HI/LO Control Relay.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
-

**P0498-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT LOW**

**P0498-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running.

- **Set Condition:**

The PCM detects a short in the NVLD Canister vent solenoid circuits. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO GROUND
NVLD ASSEMBLY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. NVLD SOLENOID

Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Measure the resistance of the NVLD Solenoid Coil.

**Is the resistance between 7.5 to 8.5 ohms?**

**Yes** >> Go To 3

**No** >> Replace the NVLD Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0498-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT LOW (CONTINUED)****3. (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO GROUND**

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (K106) NVLD Solenoid Control circuit in the NVLD electrical harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K106) NVLD Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

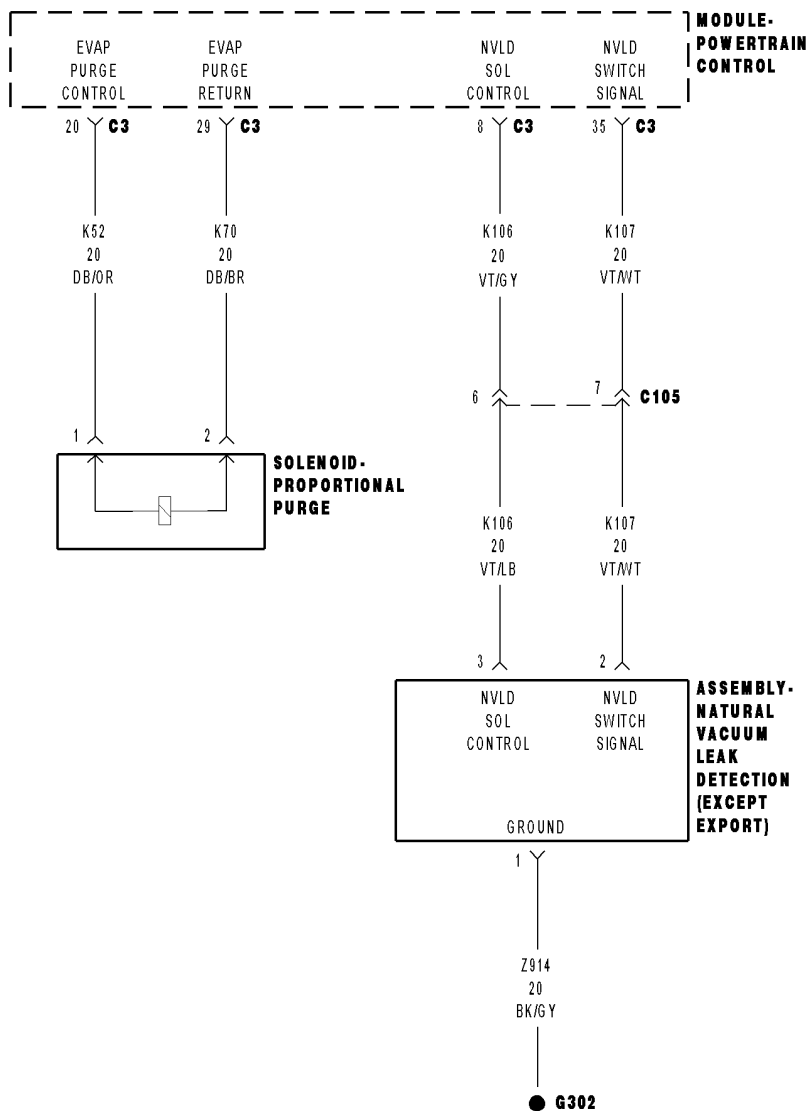

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0499-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT HIGH

**P0499-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running.

- **Set Condition:**

The PCM detects an open in the NVLD Canister vent solenoid circuits. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K106) NVLD SOLENOID CONTROL CIRCUIT OPEN
(Z914) GROUND CIRCUIT OPEN
NVLD SOLENOID
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. NVLD SOLENOID

Turn the ignition off.

Disconnect the NVLD Assembly harness connector.

Measure the resistance of the NVLD Solenoid coil.

**Is the resistance between 7.5 to 8.5 ohms?**

**Yes** >> Go To 3

**No** >> Replace the NVLD Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0499-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT HIGH (CONTINUED)

### 3. (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE

Disconnect the PCM harness connectors.

Take this measurement with the Ignition in the off (lock) position and in the Ignition on, engine off position.

Measure the voltage on the (K106) NVLD Solenoid Control circuit in the NVLD Assembly harness connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K106) NVLD Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

### 4. (K106) NVLD SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K106) NVLD Solenoid Control circuit from the NVLD Assembly harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K106) NVLD Solenoid Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0499-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT HIGH (CONTINUED)****5. (Z914) GROUND CIRCUIT OPEN**

Measure the resistance between the (Z914) Ground circuit and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (Z914) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

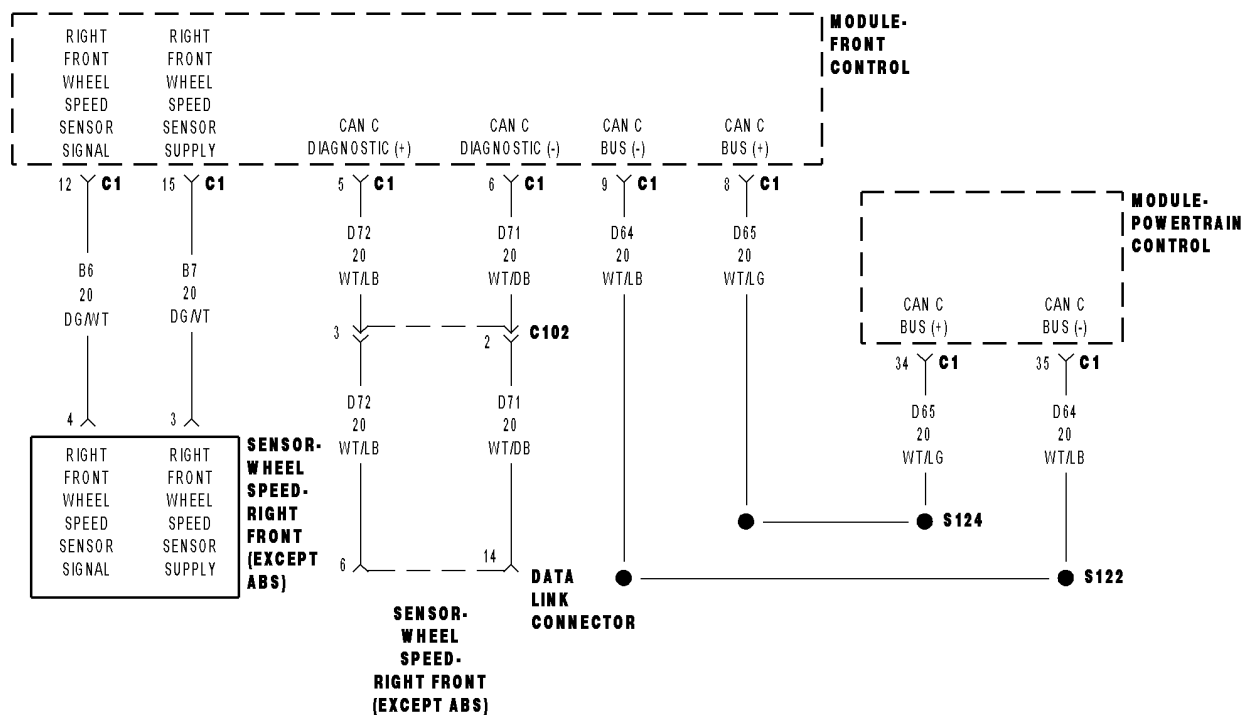

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Not Equipped with ABS)

P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Not Equipped with ABS) (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the engine running, transmission not in park or neutral, brakes not applied, and engine rpm greater than 1500.
- **Set Condition:**  
This code will set if no vehicle speed signal is received from the TCM Module for more than 11 seconds for 2 consecutive trips. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCS
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Note: The following items must be check before continuing.

- Pinion Factor and Tire Size MUST be programmed in the Front Control Module.
- All Bus Communication DTCs MUST be diagnosed.
- All Vehicle Speed DTCs that may be active in the Front Control Module or in the Transmission Control Module MUST be diagnosed.

Ignition on, engine not running.

With a scan tool, read DTCs.

Is the DTC active at this time?

Yes >> Go To 2

No >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Not Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. PCM**

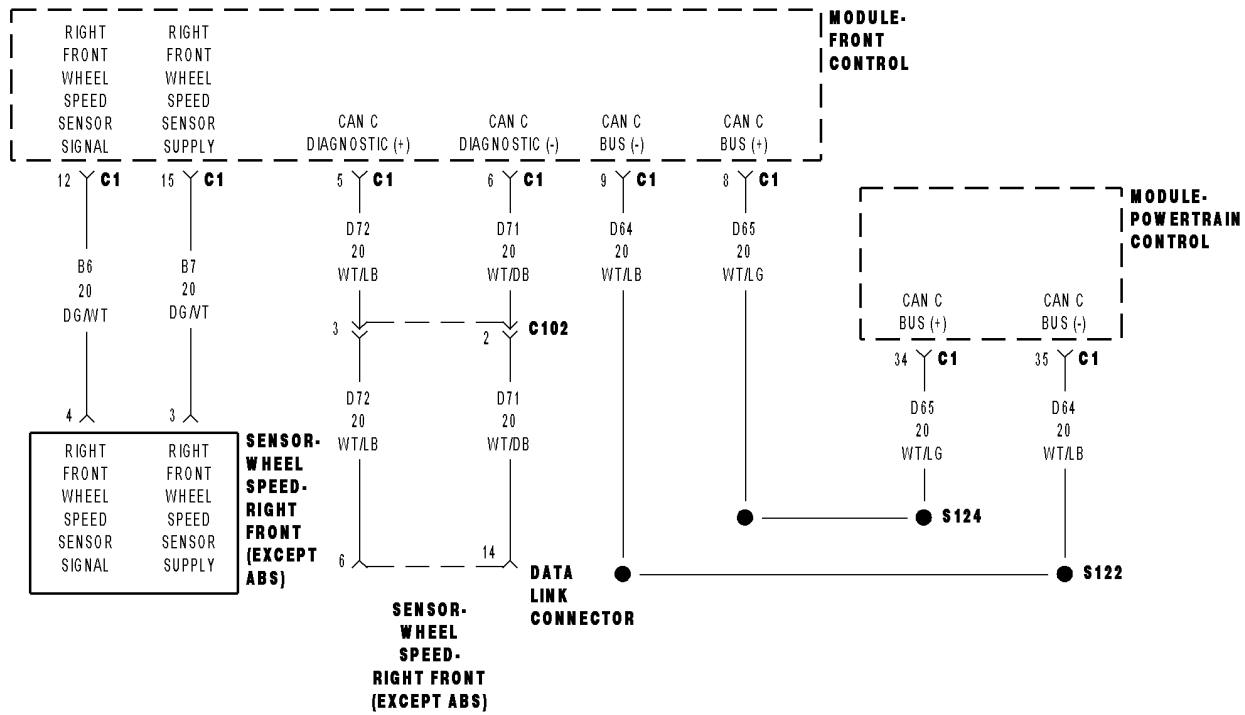

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Not Equipped with ABS)**

**P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Not Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts. Transmission in Drive or Reverse.
- **Set Condition:**  
Vehicle speed signal is erratic during road load conditions. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCs
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

**Note:** The following items must be check before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the Front Control Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All Vehicle Speed DTCs that may be active in the Front Control Module or in the Transmission Control Module **MUST** be diagnosed.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Not Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Equipped with ABS)

P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Equipped with ABS) (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
With the engine running, transmission not in park or neutral, brakes not applied, and engine rpm greater than 1500.
- **Set Condition:**  
This code will set if no vehicle speed signal is received from the ABS Module for more than 11 seconds for 2 consecutive trips. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCs
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Note: The following items must be performed before continuing.

- Pinion Factor and Tire Size MUST be programmed in the ABS Module.
- All Bus Communication DTCs MUST be diagnosed.
- All related Vehicle Speed and Wheel Speed DTCs that may be active in the ABS Module MUST be diagnosed. Refer to the ABS diagnostic information for the correct procedure.

Ignition on, engine not running.

With a scan tool, read DTCs.

Is the DTC active at this time?

Yes >> Go To 2

No >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE (Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Equipped with ABS)

**P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts. Transmission in Drive or Reverse.
- **Set Condition:**  
Vehicle speed signal is erratic during road load conditions. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCs
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

**Note:** The following items must be check before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the ABS Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All related Vehicle Speed and Wheel Speed DTCs that may be active in the ABS Module **MUST** be diagnosed. Refer to the ABS diagnostic information for the correct procedure.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0503-VEHICLE SPEED SENSOR 1 ERRATIC (Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**P0506-IDLE SPEED PERFORMANCE LOWER THAN EXPECTED**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running at idle, MAF <250 mg/tdc, air temp >-17.8°C (0°F) and <-7°C (19.4°F) enable after coolant temp >70°C (158°F) or air temp >-7°C (19.4°F), coolant temp >-7°C (19.4°F) <130°C (266°F), canister purge <100% duty cycle, and no VSS, MAF/MAP, ECT, TPS, ETC, CRK Sensor DTCs nor any fuel system or injector DTCs.

- **Set Condition:**

Engine speed is 100 RPM or more below idle speed for 7 seconds. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
AIR INDUCTION SYSTEM THROTTLE BODY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

**Note: If any other DTCs are present, they must be diagnosed and repaired before continuing this test.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0506-IDLE SPEED PERFORMANCE LOWER THAN EXPECTED (CONTINUED)****2. AIR INDUCTION SYSTEM**

Inspect the Air Induction System for the following problems.

Restrictions: Dirty Air Cleaner, Foreign material trapped in the air intake tube, etc.

Leaks: Air Intake tube connection, Air Cleaner housing, etc.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. THROTTLE BODY OPERATION**

Inspect the throttle body for carbon build up, other restrictions, and a bent throttle plate using a straight edge.

If the throttle plate does not close entirely it may be bent and needs to be replaced.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

While the vehicle is running, lightly tap on ETC Motor, with your hand, and listen for idle to raise.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**P0507-IDLE SPEED PERFORMANCE HIGHER THAN EXPECTED**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running at idle, MAF <250 mg/tdc, air temp >-17.8°C (0°F) and <-7°C (19.4°F) enable after coolant temp >70°C (158°F) or air temp >-7°C (19.4°F), coolant temp >-7°C (19.4°F) <130°C (266°F), canister purge <100% duty cycle, and no VSS, MAF/MAP, ECT, TPS, ETC, CRK Sensor DTCs nor any fuel system or injector DTCs.

- **Set Condition:**

Engine speed is 200 RPM or more above idle speed for 7 seconds. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
AIR INDUCTION SYSTEM
VACUUM LEAKS
THROTTLE BODY
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** If any other DTCs are present, they must be diagnosed and repaired before continuing this test.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0507-IDLE SPEED PERFORMANCE HIGHER THAN EXPECTED (CONTINUED)****2. AIR INDUCTION SYSTEM**

Inspect the Air Induction System for the following problems.

Restrictions: Dirty Air Cleaner, Foreign material trapped in the air intake tube, etc.

Leaks: Air Intake tube connection, Air Cleaner housing, etc.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. VACUUM LEAKS**

Start the engine.

Inspect the vehicle for external vacuum leaks.

Inspect the engine for internal leaks.

**Were any vacuum leaks found?**

**Yes** >> Repair the vacuum leak as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. THROTTLE BODY OPERATION**

Inspect the throttle body for carbon build up, other restrictions, and a bent throttle plate using a straight edge.

If the throttle plate does not close entirely it may be bent and needs to be replaced.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

While the vehicle is running, lightly tap on ETC Motor, with your hand, and listen for idle to raise.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**P0507-IDLE SPEED PERFORMANCE HIGHER THAN EXPECTED (CONTINUED)****5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P0513-INVALID SKIM KEY

**P0513-INVALID SKIM KEY (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM detects an invalid SKREEM key. One Trip Fault.

Possible Causes
INCORRECT VIN PROGRAMMED IN THE PCM NO COMMUNICATION WITH SKREEM NO VIN PROGRAMMED IN THE PCM IGNITION KEY PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With the scan tool, read the PCM DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 6

**2. NO COMMUNICATION WITH SKREEM**

With the scan tool, attempt to communicate with the SKREEM.

**Can the scan tool communicate with the SKREEM?**

**Yes** >> Go To 3

**No** >> Refer to Section 8 - Electrical VEHICLE THEFT SECURITY - ELECTRICAL DIAGNOSTICS and perform the appropriate Diagnostic Procedure.

Perform SKREEM VERIFICATION(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0513-INVALID SKIM KEY (CONTINUED)****3. SKREEM TROUBLE CODES SET**

With the scan tool, check for SKREEM DTCs.

**Are any DTCs present in the SKREEM?**

- Yes** >> Refer to Section 8 - Electrical VEHICLE THEFT SECURITY - ELECTRICAL DIAGNOSTICS and perform the appropriate Diagnostic Procedure.  
Perform SKREEM VERIFICATION(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 4
- 

**4. VIN PROGRAMMED INTO PCM**

With the scan tool, display the VIN that is programmed in the PCM.

**Has a VIN been programmed into the PCM?**

- Yes** >> Go To 5
- No** >> Program the correct VIN into the PCM and retest.  
Perform SKREEM VERIFICATION(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- 

**5. PCM**

Turn the ignition off.

Replace and program the SKREEM per Service Information.

Ignition on, engine not running.

With the scan tool, erase all SKREEM and PCM DTCs.

Attempt to start and idle the engine.

With the scan tool, read the PCM DTCs.

**Does the scan tool display this code?**

- Yes** >> NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.  
Perform SKREEM VERIFICATION(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Test Complete.
-

**P0513-INVALID SKIM KEY (CONTINUED)****6. IGNITION KEY**

**Note:** You must obtain the SKREEM pin number.

**Note:** This DTC could have been set if the SKREEM harness connector was disconnected, or if the SKREEM was replaced recently.

**Note:** All keys that the customer uses for this vehicle must be tested to verify they are operating properly. Ignition on, engine not running.

Verify the correct VIN is programmed into the PCM and SKREEM.

Turn the ignition off.

With each customer key, turn the ignition on and crank the engine to start.

With the scan tool, read the PCM DTCs. Look for P0513.

**Note:** If this DTC cannot be reset, it could have been an actual theft attempt.

**Is the Good Trip Counter for DTC P0513 displayed and equal to 0?**

**Yes** >> Replace the Ignition Key.

Perform SKREEM VERIFICATION(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/  
POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

---

P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT

## P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on, engine not running.
- **Set Condition:**  
The PCM senses the oil pressure is out of the calibrated range.

Possible Causes
(G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE RESISTANCE (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT ENGINE OIL PRESSURE SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Ensure that the engine oil is at the proper level. Also, check the customers oil change history to ensure that the oil is being changed at the correct intervals and that the proper oil viscosity is being used.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT (CONTINUED)****2. (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the Engine Oil Pressure Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (G6) Engine Oil Pressure Signal circuit in the Engine Oil Pressure Sensor harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. ENGINE OIL PRESSURE SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the Engine Oil Pressure Sensor voltage.

Connect a jumper wire between the (K900) Sensor Ground circuit and the (G6) Engine Oil Pressure Signal circuit.

**Note: Engine Oil Pressure voltage should change from approximately 4.5 volts to less than 0.5 of a volt.**

**Is the voltage reading within the listed specification when the jumper wire is installed?**

**Yes** >> Replace the Engine Oil Pressure Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note: Remove the jumper wire before continuing.**

**P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT (CONTINUED)****4. EXCESSIVE RESISTANCE IN THE (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (G6) Engine Oil Pressure Signal circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (G6) Engine Oil Pressure Signal circuit Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT (CONTINUED)****6. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance of the (F856) 5-volt Supply circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (F856) 5-VOLT SUPPLY SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

## P0520-ENGINE OIL PRESSURE SENSOR CIRCUIT (CONTINUED)

### 8. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance of the (K900) Sensor Ground circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K900) Sensor Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 9. PCM

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE

**P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running.
- **Set Condition:**  
The engine oil pressure never reaches the calibrated specification with the engine RPM at 1250.

Possible Causes
ENGINE OIL/ENGINE MECHANICAL (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE RESISTANCE (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K900) SENSOR RETURN CIRCUIT ENGINE OIL PRESSURE SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

**Note:** Ensure that the engine oil is at the proper level. Also, check the customers oil change history to ensure that the oil is being changed at the correct intervals and that the proper oil viscosity is being used.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)****2. ENGINE OIL/ENGINE MECHANICAL**

**Note:** The following items must be considered before determining the cause of this DTC. Failure to do so may lead to misdiagnosis.

- **ENGINE MECHANICAL TOLERANCES OUT OF SPECIFICATION**
- **ENGINE OIL PRESSURE OUT OF SPECIFICATION**
- **LOW ENGINE OIL**
- **OIL DIRTY OR DETERIORATED (Lack of scheduled oil changes)**
- **ENGINE OIL CONTAMINATED (i.e., coolant and/or fuel)**

If any of the above conditions are found, repair as necessary.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect the Engine Oil Pressure Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (G6) Engine Oil Pressure Signal circuit in the Engine Oil Pressure Sensor harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)****4. ENGINE OIL PRESSURE SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the Engine Oil Pressure Sensor voltage.

Connect a jumper wire between the (K900) Sensor Ground circuit and the (G6) Engine Oil Pressure Signal circuit.

**Note:** Engine Oil Pressure voltage should change from approximately 4.5 volts to less than 0.5 of a volt.

**Is the voltage reading within the listed specification when the jumper wire is installed?**

**Yes** >> Remove the Engine Oil Pressure sensor and ensure the oil passage/port is free from any blockage. If OK, replace the Engine Oil Pressure Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**Note:** Remove the jumper wire before continuing.

**5. EXCESSIVE RESISTANCE IN THE (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (G6) Engine Oil Pressure Signal circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)****6. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (G6) Engine Oil Pressure Signal circuit Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance of the (F856) 5-volt Supply circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)

### 8. (F856) 5-VOLT SUPPLY SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

### 9. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance of the (K900) Sensor Ground circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the excessive resistance in the (K900) Sensor Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0521-ENGINE OIL PRESSURE SENSOR PERFORMANCE (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

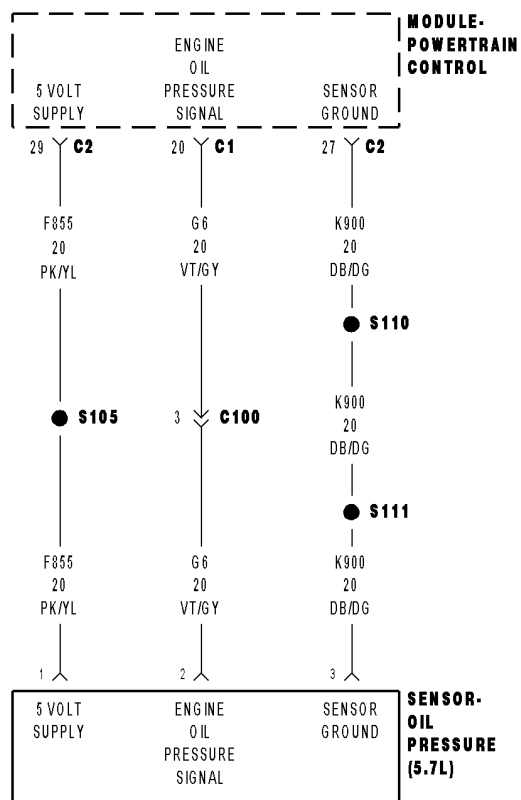

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

# P0522-ENGINE OIL PRESSURE SENSOR CIRCUIT LOW

**P0522-ENGINE OIL PRESSURE SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
The Oil pressure signal is below the calibrated amount. One Trip Fault. Three good trips to turn off the MIL.  
ETC light will illuminate.

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT OPEN (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT ENGINE OIL PRESSURE SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** Ensure that the engine oil is at the proper level. Also, check the customers oil change history to ensure that the oil is being changed at the correct intervals and that the proper oil viscosity is being used.

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0522-ENGINE OIL PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Engine Oil Pressure Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the voltage between 4.8 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

**3. ENGINE OIL PRESSURE SENSOR**

With a scan tool, monitor the Engine Oil Pressure Sensor voltage with the Sensor harness connector disconnected.

**Is the voltage above 4.5 volts?**

**Yes** >> Replace the Engine Oil Pressure Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (G6) Engine Oil Pressure Signal circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0522-ENGINE OIL PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****5. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (G6) Engine Oil Pressure Sensor Signal circuit and the (K900) Sensor Ground circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K900) Sensor Ground circuit and the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**6. (F856) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnostics.**

Measure the resistance of the (F856) 5-volt Supply circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0522-ENGINE OIL PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****7. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

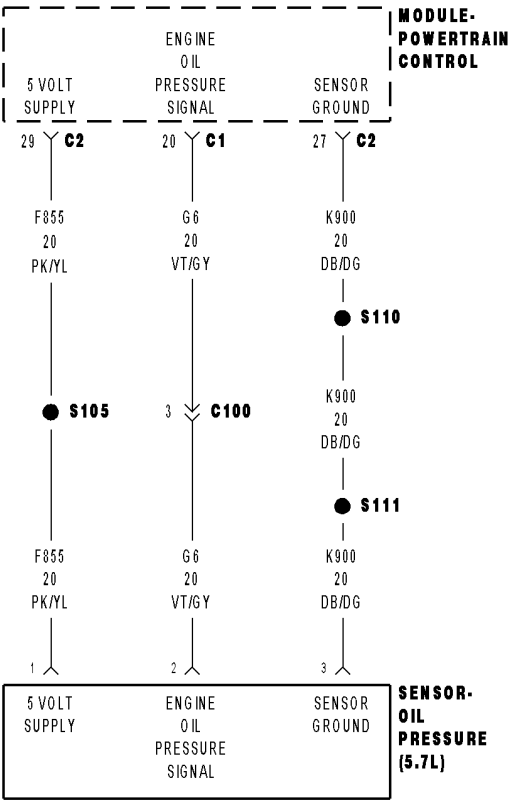

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

P0523-ENGINE OIL PRESSURE SENSOR CIRCUIT HIGH

## P0523-ENGINE OIL PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**  
The Engine Oil pressure signal is greater than the calibrated amount. One Trip Fault.

Possible Causes
(G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT OPEN
(G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT
(K900) SENSOR GROUND CIRCUIT OPEN
ENGINE OIL PRESSURE SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Ensure that the engine oil is at the proper level. Also, check the customers oil change history to ensure that the oil is being changed at the correct intervals and that the proper oil viscosity is being used.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0523-ENGINE OIL PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****2. ENGINE OIL PRESSURE SENSOR**

Turn the ignition off.

Disconnect the Engine Oil Pressure Sensor harness connector.

Connect a jumper wire between the (G6) Engine Oil Pressure Signal circuit and the (K900) Sensor Ground circuit in the Engine Oil Pressure Sensor harness connector.

With a scan tool, monitor the Engine Oil Pressure Sensor voltage.

Ignition on, engine not running.

**Is the voltage below 0.5 of a volt with the jumper wire installed?**

**Yes** >> Replace the Engine Oil Pressure Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (G6) Engine Oil Pressure Signal circuit in the Engine Oil Pressure Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0523-ENGINE OIL PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****4. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (G6) Engine Oil Pressure Signal circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance between the (G6) Engine Oil Pressure Signal circuit and the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (F856) 5-volt Supply circuit and the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0523-ENGINE OIL PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****6. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor Ground circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K900) Sensor Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0524-ENGINE OIL PRESSURE TOO LOW

**P0524-ENGINE OIL PRESSURE TOO LOW (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running.
- **Set Condition:**  
The engine oil pressure never reaches the calibrated specification to allow the MDS activation.

Possible Causes
ENGINE OIL/ENGINE MECHANICAL (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE RESISTANCE (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT (G6) ENGINE OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K900) SENSOR RETURN CIRCUIT ENGINE OIL PRESSURE SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** Ensure that the engine oil is at the proper level. Also, check the customers oil change history to ensure that the oil is being changed at the correct intervals and that the proper oil viscosity is being used.

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?**
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0524-ENGINE OIL PRESSURE TOO LOW (CONTINUED)****2. ENGINE OIL/ENGINE MECHANICAL**

**Note:** The following items must be considered before determining the cause of this DTC. Failure to do so may lead to misdiagnosis.

- **ENGINE MECHANICAL TOLERANCES OUT OF SPECIFICATION**
- **ENGINE OIL PRESSURE OUT OF SPECIFICATION**
- **LOW ENGINE OIL**
- **OIL DIRTY OR DETERIORATED (Lack of scheduled oil changes)**
- **CORRECT VISCOSITY**
- **ENGINE OIL CONTAMINATED (i.e., coolant and/or fuel)**

If any of the above conditions are found, repair as necessary.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. ENGINE OIL PRESSURE SENSOR**

Turn the ignition off.

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the Engine Oil Pressure Sensor voltage.

Connect a jumper wire between the (K900) Sensor Ground circuit and the (G6) Engine Oil Pressure Signal circuit.

**Note:** Engine Oil Pressure voltage should change from approximately 4.5 volts to less than 0.5 of a volt.

**Is the voltage reading within the listed specification when the jumper wire is installed?**

**Yes** >> Remove the Engine Oil Pressure sensor and ensure the oil passage/port is free from any blockage. If OK, replace the Engine Oil Pressure Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note:** Remove the jumper wire before continuing.

**P0524-ENGINE OIL PRESSURE TOO LOW (CONTINUED)****4. EXCESSIVE RESISTANCE IN THE (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (G6) Engine Oil Pressure Signal circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**5. (G6) ENGINE OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (G6) Engine Oil Pressure Signal circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G6) Engine Oil Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0524-ENGINE OIL PRESSURE TOO LOW (CONTINUED)****6. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance of the (F856) 5-volt Supply circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (F856) 5-VOLT SUPPLY SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the Engine Oil Pressure Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P0524-ENGINE OIL PRESSURE TOO LOW (CONTINUED)****8. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor Ground circuit from the Engine Oil Pressure Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K900) Sensor Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

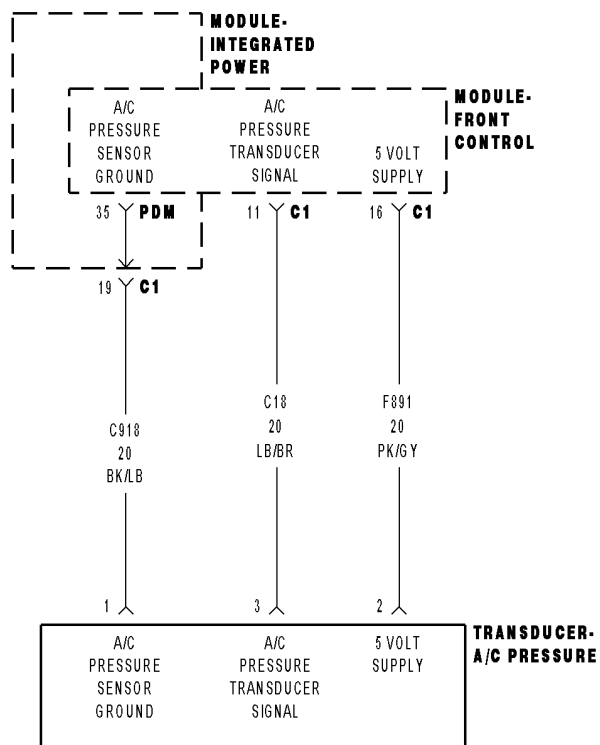

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0532-A/C PRESSURE SENSOR CIRCUIT LOW

**P0532-A/C PRESSURE SENSOR CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running, A/C is learned, and AC Clutch Relay energized.

- **Set Condition:**

The A/C pressure sensor signal voltage at the PCM goes below 0.58 of a volt for 2.6 seconds. One Trip Fault.  
Three good trips to turn off the MIL.

Possible Causes
(F891) 5-VOLT SUPPLY CIRCUIT OPEN
(F891) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
A/C PRESSURE TRANSDUCER
(C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND
(C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO (C918) SENSOR GROUND CIRCUIT
FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C PRESSURE TRANSDUCER VOLTAGE BELOW 0.6 OF A VOLT

**Note:** Make sure the A/C refrigerant System is properly charged per Service Information.

Start the engine.

With a scan tool, read the A/C Pressure Sensor voltage.

**Is the voltage below 0.6 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0532-A/C PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****2. (F891) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the A/C Pressure Transducer harness connector.

Ignition on, engine not running.

Measure the voltage on the (F891) 5-volt Supply circuit in the A/C Pressure Transducer harness connector.

**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

**3. A/C PRESSURE TRANSDUCER**

With the scan tool, monitor the A/C Pressure Transducer voltage.

**Is the voltage above 0.6 of a volt?**

**Yes** >> Replace the A/C Pressure Transducer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C1 FCM harness connector.

Measure the resistance between the (C18) A/C Pressure Signal circuit in the A/C Pressure Transducer harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (C18) A/C Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P0532-A/C PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****5. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (C918) SENSOR GROUND CIRCUIT**

Disconnect the C3 FCM harness connector.

Measure the resistance between the (C18) A/C Pressure Signal circuit and the (C918) Sensor Ground circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (C918) Sensor Ground circuit and the (C18) A/C Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**6. (F891) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the C1 FCM harness connector.

Measure the resistance of the (F891) 5-volt Supply circuit from the A/C Pressure Transducer harness connector to the C1 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F891) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0532-A/C PRESSURE SENSOR CIRCUIT LOW (CONTINUED)****7. (F891) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between the (F891) 5-volt Supply circuit in the A/C Pressure Transducer harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F891) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. FRONT CONTROL MODULE**

**Note:** Before continuing, check the FCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

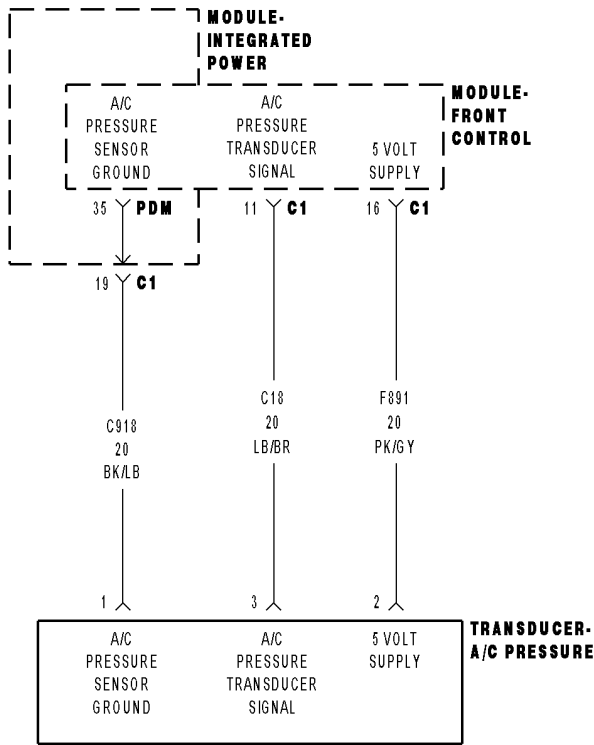

**Yes** >> Repair as necessary.

Perform BODY VERIFICATION TEST-VER 1.

**No** >> Replace and program the Front Control Module per Service Information.

Perform BODY VERIFICATION TEST-VER 1.

P0533-A/C PRESSURE SENSOR CIRCUIT HIGH

## P0533-A/C PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running and the A/C Clutch Relay energized.
- **Set Condition:**  
The A/C pressure transducer signal at the PCM goes above 4.92 volts. One trip Fault. Three good trips to turn off the MIL.

Possible Causes
(C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(C18) A/C PRESSURE SIGNAL CIRCUIT OPEN
(C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO (F891) 5-VOLT SUPPLY CIRCUIT
(C918) SENSOR GROUND CIRCUIT OPEN
A/C PRESSURE TRANSDUCER
FRONT CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C PRESSURE TRANSDUCER VOLTAGE ABOVE 4.9 VOLTS

**Note: Make sure the A/C refrigerant system is properly charged per Service Information.**

Start the engine.

With a scan tool, read the A/C Pressure Sensor voltage.

**Is the voltage above 4.9 volts?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0533-A/C PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****2. A/C PRESSURE TRANSDUCER**

Turn the ignition off.

Disconnect the A/C Pressure Transducer harness connector.

Connect a jumper wire between the (C18) A/C Pressure Signal circuit and the (C918) Sensor Ground circuit in the Transducer harness connector.

Ignition on, engine not running.

With the scan tool, monitor the A/C Pressure Transducer voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the A/C Pressure Transducer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the C1 FCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (C18) A/C Pressure Signal circuit in the A/C Pressure Transducer harness connector.

**Is there voltage present?**

**Yes** >> Repair the short to battery voltage in the (C18) A/C Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0533-A/C PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)

### 4. (C18) A/C PRESSURE SIGNAL CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (C18) A/C Pressure Signal circuit from the A/C Pressure Transducer harness connector to the C1 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (C18) A/C Pressure Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

### 5. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (F891) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (C18) A/C Pressure Signal circuit and the (F891) 5-volt Supply circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (F891) 5-volt Supply circuit and the (C18) A/C Pressure Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0533-A/C PRESSURE SENSOR CIRCUIT HIGH (CONTINUED)****6. (C918) SENSOR GROUND CIRCUIT OPEN**

Disconnect the C3 FCM harness connector.

Measure the resistance of the (C918) Sensor Ground circuit from the A/C Pressure Sensor harness connector to the C3 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (C918) Sensor Ground circuit  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. FRONT CONTROL MODULE**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform BODY VERIFICATION TEST - VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0551-POWER STEERING PRESSURE SWITCH PERFORMANCE**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition key on and engine running.
- **Set Condition:**  
With the vehicle above 40 m.p.h. for over 30 seconds, the power steering pressure switch remains open. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K66) P/S SWITCH SIGNAL CIRCUIT OPEN (K66) P/S SWITCH SIGNAL CIRCUIT SHORTED TO GROUND (Z988) GROUND CIRCUIT OPEN POWER STEERING PRESSURE SWITCH PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.

**P0551-POWER STEERING PRESSURE SWITCH PERFORMANCE (CONTINUED)****2. POWER STEERING PRESSURE SWITCH**

Turn the ignition off.

Disconnect the Power Steering Pressure Switch harness connector.

Ignition on, engine not running.

Connect a jumper wire to the (K66) P/S Switch Signal circuit at the Power Steering Pressure Switch harness connector.

Use the scan tool to monitor the Power Steering Pressure Switch status.

Touch the other end of the jumper wire to the (Z988) Ground circuit at the Power Steering Pressure Switch harness connector several times.

**Did the Power Steering Pressure Switch status change from High to Low when connecting and disconnecting the jumper wire?**

**Yes** >> Replace the Power Steering Pressure Switch.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (K66) P/S SWITCH SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure resistance of (K66) P/S Switch Signal circuit from the Power Steering Pressure Switch harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K66) P/S Switch Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.

**P0551-POWER STEERING PRESSURE SWITCH PERFORMANCE (CONTINUED)****4. (K66) P/S SWITCH SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between the (K66) P/S Switch Signal circuit in the Switch connector and ground.

**Is the resistance below 100 ohms?**

- Yes** >> Repair the short to ground in the (K66) P/S Switch Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.
- No** >> Go To 5

**5. (Z988) GROUND CIRCUIT OPEN**

Measure the resistance between Ground and the (Z988) Ground circuit in the Power Steering Pressure Switch connector.

**Is the resistance below 100 ohms?**

- Yes** >> Go To 6
- No** >> Repair the open in the (Z988) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.

**6. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.

[illegible]

**P0562-BATTERY VOLTAGE LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

The engine running. The engine speed greater than 1000 RPM.

- **Set Condition:**

Battery voltage is 1 volt less than desired voltage for a set period of time. One Trip Fault. ETC light is flashing.

Possible Causes
RESISTANCE IN THE (A1) BATTERY POSITIVE CIRCUIT
RESISTANCE IN THE GENERATOR CASE GROUND
GENERATOR OPERATION
(K20) GENERATOR FIELD CONTROL CIRCUIT OPEN
(K20) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO GROUND
(Z20) GROUND CIRCUIT OPEN
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Make sure the Battery is in good condition. Using the Midtronics Battery Tester, test the Battery before continuing.

**Note:** Inspect the vehicle for after market accessories that may exceed the Generator System output.

Turn the ignition off.

**Note:** Make sure the generator drive belt is in good operating condition.

**Note:** Inspect the fuses in the IPM. If an open fuse is found, use the wire diagram/schematic as a guide, inspect the wiring and connectors for damage.

Ignition on, engine not running.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0562-BATTERY VOLTAGE LOW (CONTINUED)****2. (A1) B+ CIRCUIT HIGH RESISTANCE**

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

**Note:** Make sure all wires are clear of the engine's moving parts. Measure the voltage between the (A1) B+ Terminal at the Generator and the Battery + Post.

Start the engine.

**Is the voltage above 0.4 of a volt?**

**Yes** >> Repair the excessive resistance in the (A1) B+ circuit between the Generator and Battery.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. GENERATOR CASE GROUND HIGH RESISTANCE**

Ignition on, engine not running.

Start the engine.

Allow the engine to reach normal operating temperature.

**Note:** Make sure all wires are clear of the engine's moving parts.

Measure the voltage between the Generator case and Battery ground post.

**Is the voltage above 0.1 of a volt?**

**Yes** >> Repair excessive resistance in the Generator Ground between the Generator Case and Battery ground side.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

## P0562-BATTERY VOLTAGE LOW (CONTINUED)

### 4. GENERATOR OPERATION

Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump it across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Gen Field Control circuit.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

### 5. (K20) GENERATOR FIELD CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K20) Gen Field Control circuit from the Generator harness connector to the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K20) Gen Field Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0562-BATTERY VOLTAGE LOW (CONTINUED)****6. (K20) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between the (K20) Gen Field Control circuit in the Generator Field harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K20) Gen Field Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (Z20) GROUND CIRCUIT OPEN**

Measure the resistance between the (Z20) Ground circuit in the Generator Field harness connector and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (Z20) Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

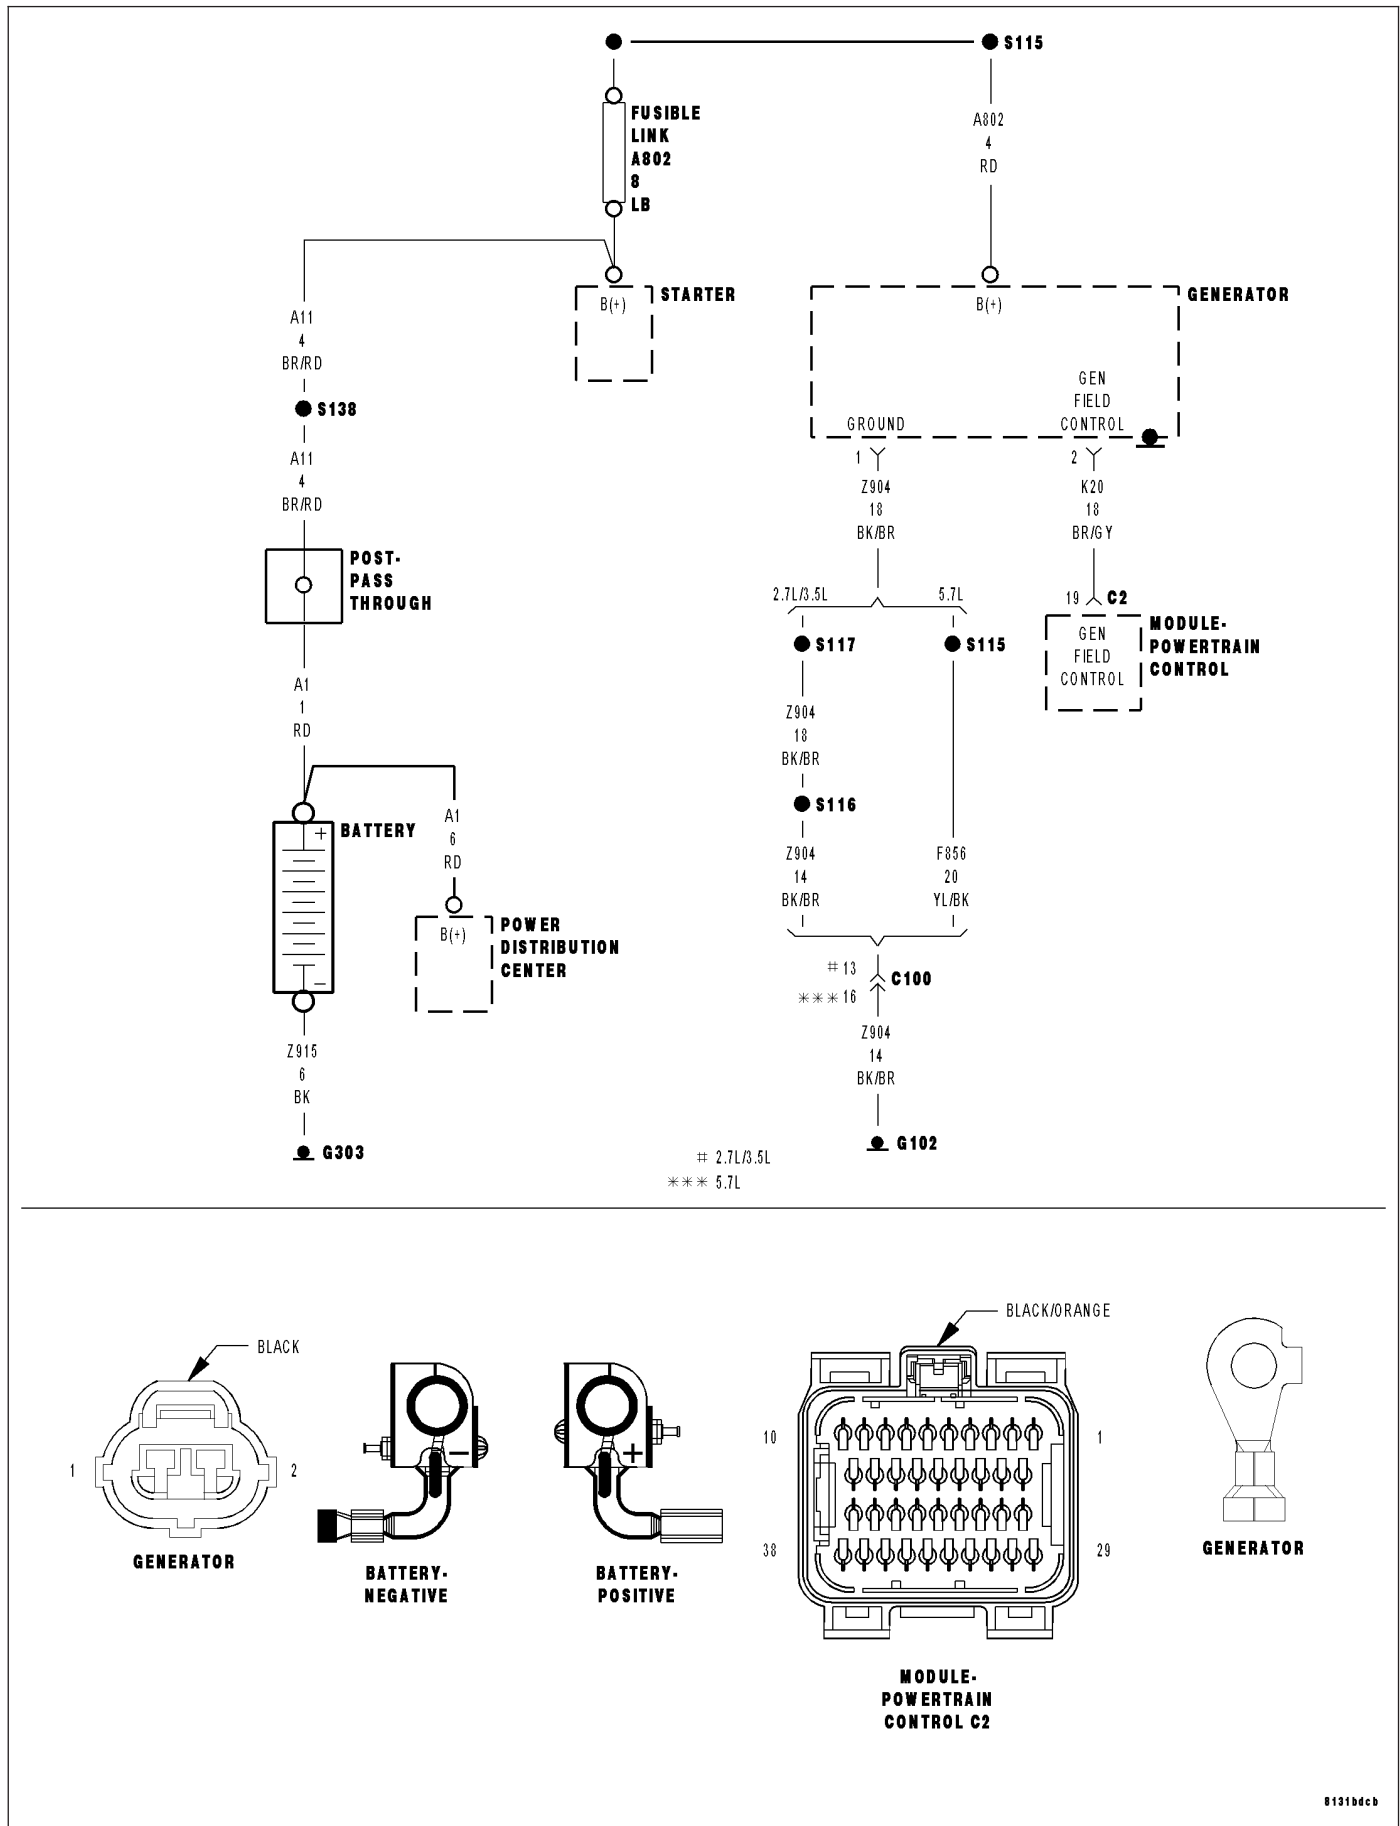

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0563-BATTERY VOLTAGE HIGH

P0563-BATTERY VOLTAGE HIGH (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Engine RPM greater than 1000 RPM. With no other charging system codes set.
- **Set Condition:**  
Battery voltage is 1 volt greater than desired voltage. Battery voltage greater than 15.75 volts. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K20) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE
GENERATOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

**Note:** Make sure the Battery is in good condition. Using the Midtronics Battery Tester, test the Battery before continuing.

**Note:** Inspect the vehicle for after market accessories that may exceed the Generator System output.

Turn the ignition off.

**Note:** Make sure the generator drive belt is in good operating condition.

**Note:** Inspect the fuses in the IPM. If a fuse is open use the wire diagram/schematic as a guide, inspect the wiring and connectors for damage.

Ignition on, engine not running.

With a scan tool, read DTCs.

Is the DTC active at this time?

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0563-BATTERY VOLTAGE HIGH (CONTINUED)

### 2. GENERATOR OPERATION

Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Generator Field Driver.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. (K20) FIELD CIRCUIT SHORTED BATTERY VOLTAGE

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K20) Gen Field Control circuit at the Generator Field harness connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K20) Gen Field Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0563-BATTERY VOLTAGE HIGH (CONTINUED)****4. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## P0571-BRAKE SWITCH 1 PERFORMANCE

P0571-BRAKE SWITCH 1 PERFORMANCE (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
If the output of Brake Switch No.1 to the PCM looks like it is not applied, while Brake Switch No.2 circuit is applied the fault will mature in 60ms. One Trip Fault.

Possible Causes
(B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND (B15) BRAKE SWITCH NO.1 SIGNAL OPEN (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND (B16) BRAKE SWITCH NO.2 SIGNAL OPEN (Z912) GROUND CIRCUIT OPEN (F202) FUSED IGNITION SWITCH OUTPUT OPEN STOP LAMP SWITCH PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

**Note:** Make sure the Stop Lamp Switch is properly adjusted before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (B16) Brake Lamp Switch No.2 circuits are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**      >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0571-BRAKE SWITCH 1 PERFORMANCE (CONTINUED)

### 2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. (B15) BRAKE SWITCH NO.1 SIGNAL OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (B15) Brake Switch No.1 Signal circuit between the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0571-BRAKE SWITCH 1 PERFORMANCE (CONTINUED)****4. (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between the (B16) Brake Switch No.2 Signal circuit in the Stop Lamp Switch harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (B16) BRAKE SWITCH NO.2 SIGNAL OPEN**

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (B16) Brake Switch No.2 Signal circuit between the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0571-BRAKE SWITCH 1 PERFORMANCE (CONTINUED)****6. (F202) FUSED IGNITION SWITCH OUTPUT (RUN-START) OPEN**

Reconnect the PCM harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, probe the (F202) Fused Ignition Switch Output circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F202) Fused Ignition Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**7. (Z912) GROUND CIRCUIT OPEN**

Using the 12-Volt test light connected to battery voltage, probe the (Z912) Ground circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 8

**No** >> Repair the open in the (Z912) Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**8. STOP LAMP SWITCH**

Remove the Stop Lamp Switch.

Measure the resistance between terminals 1 and 2 of the Stop Lamp Switch.

Next, measure the resistance between terminals 3 and 4 of the Stop Lamp Switch.

Press and release the Stop Lamp Switch while monitoring the ohmmeter during both of the above steps.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

**Yes** >> Go To 9

**No** >> Replace the Stop Lamp Switch.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0571-BRAKE SWITCH 1 PERFORMANCE (CONTINUED)****9. PCM**

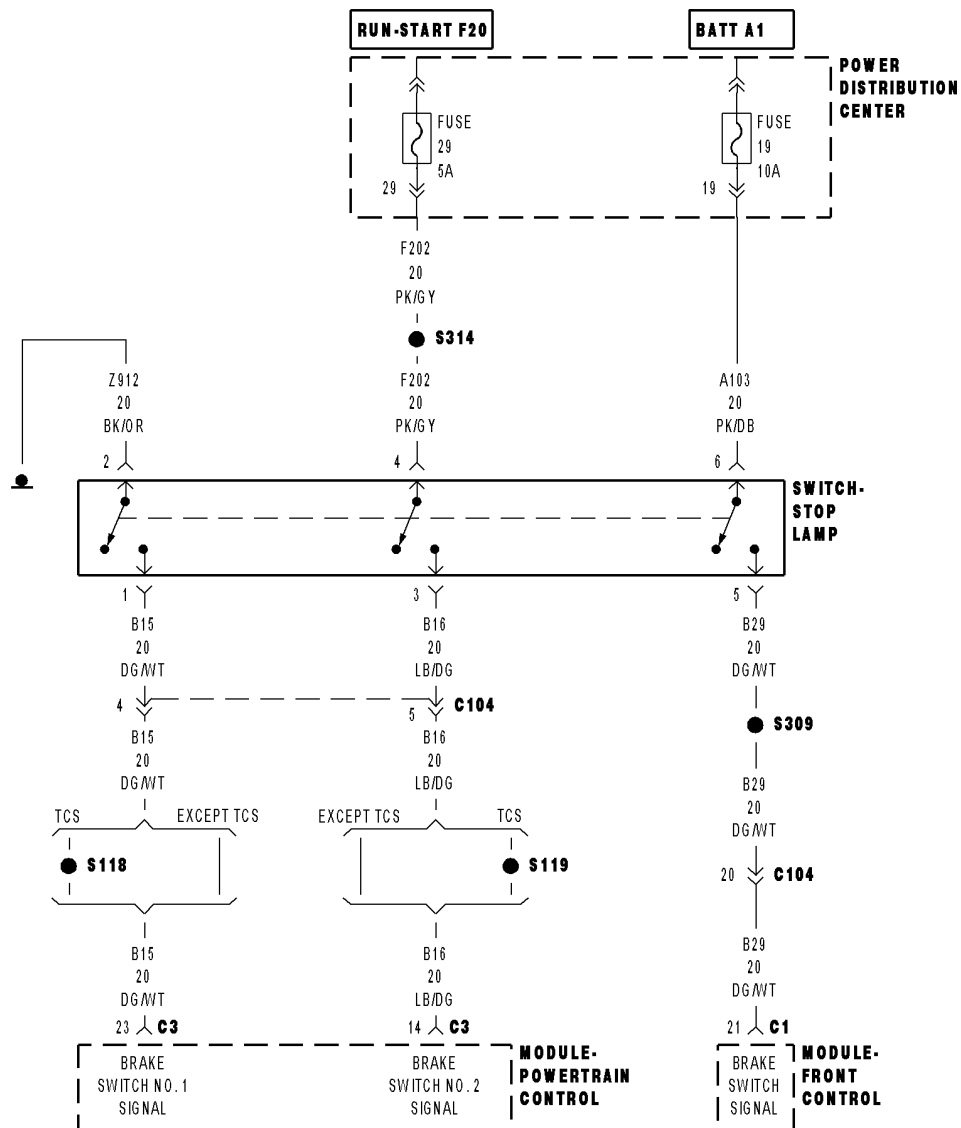

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
-

# P0572-BRAKE SWITCH 1 STUCK ON

**P0572-BRAKE SWITCH 1 STUCK ON (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM recognizes the Brake Switch #1 is mechanically stuck in the low/on position. One Trip Fault.

Possible Causes
(B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND (B16) BRAKE SWITCH NO.2 SIGNAL OPEN (F202) FUSED IGNITION SWITCH OUTPUT OPEN STOP LAMP SWITCH PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** Make sure the Stop Lamp Switch is properly adjusted before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (B16) Brake Lamp Switch No.2 circuit are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## P0572-BRAKE SWITCH 1 STUCK ON (CONTINUED)

### 2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. (B16) BRAKE SWITCH NO.2 SIGNAL OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (B16) Brake Switch No.2 Signal circuit from the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0572-BRAKE SWITCH 1 STUCK ON (CONTINUED)****4. (B16) BRAKE SWITCH NO.2 SIGNAL SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the Brake Switch No.2 Signal circuit in the Stop Lamp Switch harness connector.

**Does the voltmeter indicate voltage present?**

**Yes** >> Repair the short to voltage in the (B16) Brake Switch No.2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. STOP LAMP SWITCH**

Remove the Stop Lamp Switch.

Measure the resistance between terminals 1 and 2 of the Stop Lamp Switch.

Next, measure the resistance between terminals 3 and 4 of the Stop Lamp Switch.

Apply and release the brake pedal switch while monitoring the ohmmeter during both of the above steps.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

**Yes** >> Go To 6

**No** >> Replace the Stop Lamp Switch.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**6. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

# P0573-BRAKE SWITCH 1 STUCK OFF

P0573-BRAKE SWITCH 1 STUCK OFF (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM recognizes Brake Switch No.1 is stuck in the Off/high position. One Trip Fault.

Possible Causes
(B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND (B15) BRAKE SWITCH NO.1 SIGNAL SHORT TO VOLTAGE (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND (B16) BRAKE SWITCH NO.2 SIGNAL OPEN (Z912) GROUND CIRCUIT OPEN (F202) FUSED IGNITION SWITCH OUTPUT OPEN STOP LAMP SWITCH PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

**Note:** Make sure the Stop Lamp Switch is properly adjusted before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (B16) Brake Lamp Switch No.2 circuits are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

Is the DTC active at this time?

- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0573-BRAKE SWITCH 1 STUCK OFF (CONTINUED)****2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (B15) BRAKE SWITCH NO.1 SIGNAL SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Does the voltmeter indicate voltage present?**

**Yes** >> Repair the short voltage in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B16) Brake Switch No.2 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

## P0573-BRAKE SWITCH 1 STUCK OFF (CONTINUED)

## 5. (B16) BRAKE SWITCH NO.2 SIGNAL OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (B16) Brake Switch No.2 Signal circuit from the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

## 6. (F202) FUSED IGNITION SWITCH OUTPUT (RUN-START) OPEN

Re connect the PCM harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, probe the (F202) Fused Ignition Switch Output circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F202) Fused Ignition Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**P0573-BRAKE SWITCH 1 STUCK OFF (CONTINUED)****7. (Z912) GROUND CIRCUIT OPEN**

Using the 12-Volt test light connect to battery voltage, probe the (Z912) Ground circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 8

**No** >> Repair the open in the (Z912) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**8. STOP LAMP SWITCH**

Remove the Stop Lamp Switch.

Measure the resistance between terminals 1 and 2 of the Stop Lamp Switch.

Next, measure the resistance between terminals 3 and 4 of the Stop Lamp Switch.

Apply and release the brake pedal switch while monitoring the ohmmeter during both of the above steps.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

**Yes** >> Go To 9

**No** >> Replace the Stop Lamp Switch.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**9. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

P0600-SERIAL COMMUNICATION LINK

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
Internal Bus communication failure between processors. One Trip Fault. Three Global Good Trips to Clear.

Possible Causes
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. PCM

**Note:** Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.

The Powertrain Control Module is reporting internal errors, view repair to continue.

Repair

- Replace and program the Powertrain Control Module per Service Information.
- Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0601-INTERNAL MEMORY CHECKSUM INVALID**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on.
- **Set Condition:**  
Internal checksum for software failed, does not match calculated value. One Trip Fault, Three Good Trips to clear.

Possible Causes
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. PCM**

**Note:** Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.

**The Powertrain Control Module is reporting internal errors, view repair to continue.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

P0606-INTERNAL ECM PROCESSOR

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running.
- **Set Condition:**  
When the PCM recognizes an internal failure to communicate with the ECM or the CMP and CKP Sensor count periods are too short. One trip fault. ETC light is flashing.

Possible Causes
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. PCM

**Note:** Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.

The Powertrain Control Module is reporting internal errors, view repair to continue.

Repair

- Replace and program the Powertrain Control Module per Service Information.
  - Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P060B-ETC A/D GROUND PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
When the Throttle Motor is powered.
- **Set Condition:**  
When A to D reading does not return to ground within a set period of time of test activation, this fault sets. The test typically runs a couple of times per second, and is the reason why APP2 signal spikes to ground a couple of times per second in normal running. Reprogramming the module may not always fix this fault. ETC lamp will flash.

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PROGRAM THE POWERTRAIN CONTROL MODULE

Verify the PCM is at the latest calibration (flash level).

**Note:** An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.

**Note:** Diagnose any other DTCs that may have set with the P060B.

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

#### Does this DTC reset by itself?

- Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.

P060D-ETC LEVEL 2 APP PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Throttle motor is powered and no matured faults related to APP Sensors.
- **Set Condition:**  
When secondary software determines that APPS 1 and APPS 2 signals do not match for a period of time. ETC lamp will flash

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. PROGRAM THE POWERTRAIN CONTROL MODULE

Verify the PCM is at the latest calibration (flash level).

**Note:** An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note:** Diagnose any other DTCs that may have set with the P060D.

Does this DTC reset by itself?

- Yes

>> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No

>> Test Complete.

## P060E-ETC LEVEL 2 TPS PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Throttle motor is powered and no matured faults related to TP Sensors.
- **Set Condition:**  
When secondary software determines that TPS 1 and TPS 2 signals do not match for a period of time. ETC lamp will flash.

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PROGRAM THE POWERTRAIN CONTROL MODULE

Verify the PCM is at the latest calibration (flash level).

**Note: An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.**

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note: Diagnose any other DTCs that may have set with the P060E.**

**Does this DTC reset by itself?**

- Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.

P060F-ETC LEVEL 2 ECT PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Throttle motor is powered and no matured faults related to the Engine Coolant Temp Sensor.
- **Set Condition:**  
When secondary software determines that the Coolant Temperature is implausible for a period of time. ETC lamp will flash.

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. PROGRAM THE POWERTRAIN CONTROL MODULE

**Note:** Diagnose any Engine Coolant Temperature Sensor DTCs before continuing.

Verify the PCM is at the latest calibration (flash level).

**Note:** An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note:** Diagnose any other DTCs that may have set with the P060F.

Does this DTC reset by itself?

- Yes

>> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No

>> Test Complete.

## P061A-ETC LEVEL 2 TORQUE PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Throttle motor is powered.
- **Set Condition:**  
When secondary software determines that the customer requested output is not being achieved by the engine for a period of time. ETC lamp will flash

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PROGRAM THE POWERTRAIN CONTROL MODULE

**Note:** Check the engine for air/vacuum leaks and diagnose any Fuel System Lean/Rich as well as MAP Sensor DTCs before continuing.

Verify the PCM is at the latest calibration (flash level).

**Note:** An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note:** Diagnose any other DTCs that may have set with the P061A.

**Does this DTC reset by itself?**

- Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.

## P061C-ETC LEVEL 2 RPM PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Throttle motor is powered and no camshaft or crankshaft electrical signal related DTCs are set.

- **Set Condition:**

When secondary software determines that the engine speed is implausible for a period of time. ETC lamp will flash.

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAM THE POWERTRAIN CONTROL MODULE

**Note:** Diagnose any Camshaft Position and Crankshaft Position Sensor DTCs before continuing.

Verify the PCM is at the latest calibration (flash level).

**Note:** An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note:** Diagnose any other DTCs that may have set with the P061C.

**Does this DTC reset by itself?**

**Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

**P0622-GENERATOR FIELD CONTROL CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Engine running.
- **Set Condition:**  
When the PCM tries to regulate the generator field with no result during monitoring. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K20) GEN FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K20) GEN FIELD CONTROL CIRCUIT OPEN
(K20) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND
(Z20) GROUND CIRCUIT OPEN
GENERATOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0622-GENERATOR FIELD CONTROL CIRCUIT (CONTINUED)****2. GENERATOR OPERATION**

Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump it across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Generator Field Control circuit.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K20) GEN FIELD CIRCUIT SHORTED BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K20) Gen Field Control circuit in the Generator Field harness connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K20) Gen Field Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P0622-GENERATOR FIELD CONTROL CIRCUIT (CONTINUED)****4. (K20) GEN FIELD CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K20) Gen Field Control circuit from the Generator Field harness connector to appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K20) Gen Field Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K20) GEN FIELD CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K20) Gen Field Control circuit in the Generator Field harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K20) Gen Field Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0622-GENERATOR FIELD CONTROL CIRCUIT (CONTINUED)****6. (Z20) GROUND CIRCUIT OPEN**

Measure the resistance between the (Z20) Ground circuit in the Gen Field harness connector and ground.

**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z20) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Wiring Diagram:**

- POWER DISTRIBUTION CENTER:**
  - FUSE:** 6 20A
  - RELAY-FUEL PUMP:**
    - Terminal 85: RUN-START F20
    - Terminal 30: BATT A1
    - Terminal 86: K31 20 BR → C105
    - Terminal 87A: K31 20 BR → C3
    - Terminal 87: N1 16 DB/OR → FUEL PUMP RELAY OUTPUT
- MODULE-POWERTRAIN CONTROL:**
  - Terminal 37: C3
  - Terminal 38: FUEL PUMP RELAY CONTROL
- MODULE-FUEL PUMP:**
  - Terminal 5: FUEL PUMP RELAY OUTPUT
  - Terminal 4: GROUND
  - Terminal 3: Z912 16 BK/OR → G300

**Physical Layout:**

- MODULE-POWERTRAIN CONTROL:**
  - Terminal 1: BLACK
  - Terminal 5: (Left side)
- MODULE-FUEL PUMP:**
  - Terminal 1: NATURAL
  - Terminal 10: (Top left)
  - Terminal 29: (Right side)
  - Terminal 38: (Bottom left)

## P0627-FUEL PUMP RELAY CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**  
An open or shorted condition is detected in the fuel pump relay control circuit. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(F20) FUSED IGNITION SWITCH OUTPUT CIRCUIT (A109) FUSED B+ CIRCUIT (K31) FUEL PUMP RELAY CONTROL CIRCUIT (K31) FUEL PUMP RELAY CONTROL CIRCUIT SHORTED TO GROUND FUEL PUMP RELAY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. FUEL PUMP RELAY OPERATION

Ignition on, engine not running.

With a scan tool, actuate the Fuel Pump Relay.

**Is the Fuel Pump Relay operating?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 2

**P0627-FUEL PUMP RELAY CIRCUIT (CONTINUED)****2. FUEL PUMP RELAY**

Turn the ignition off.

Remove the Fuel Pump Relay from the IPM.

Measure the resistance of the Fuel Pump Relay Coil.

**Is the resistance between 70 to 90 ohms?**

**Yes** >> Go To 3

**No** >> Replace the Fuel Pump Relay.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. (F20) FUSED IGNITION SWITCH OUTPUT CIRCUIT**

Ignition on, engine not running.

Using a 12-volt test light connected to ground, probe the (F20) Fused Ignition Switch Output circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F20) Fused Ignition Switch Output circuit. Inspect the related fuse and repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**4. (A109) FUSED B+ CIRCUIT**

Ignition on, engine not running.

Using a 12-volt test light connected to ground, probe the (A109) Fused B+ circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (A109) Fused B+ circuit. Inspect the related fuse and repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0627-FUEL PUMP RELAY CIRCUIT (CONTINUED)****5. (K31) CONTROL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K31) Fuel Pump Relay Control circuit from the IPM to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K31) Fuel Pump Relay Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. (K31) CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K31) Fuel Pump Relay Control circuit in the IPM.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K31) Fuel Pump Relay Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**P0627-FUEL PUMP RELAY CIRCUIT (CONTINUED)****7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P062C-ETC LEVEL 2 MPH PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Throttle motor is powered and no vehicle speed related DTCs have matured.

- **Set Condition:**

When secondary software determines that the vehicle speed is implausible for a period of time. ETC lamp will flash

Possible Causes
PCM NEEDS TO BE PROGRAMMED
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PROGRAM THE POWERTRAIN CONTROL MODULE

Verify the PCM is at the latest calibration (flash level).

**Note: An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.**

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

With a scan tool, read DTCs.

**Note: Diagnose any other DTCs that may have set with the P062C.**

#### Does this DTC reset by itself?

**Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER

- 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P0630-VIN NOT PROGRAMMED IN PCM

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The VIN has not been programmed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PROGRAMMING VIN INTO PCM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAMMING VIN INTO THE PCM

Ignition on, engine not running.

Using the scan tool, program VIN into the PCM.

Start the engine.

**Note: If the engine will not start, crank the engine over for 15 seconds. Crank at least 2 times with the ignition switch returning to the off position each time.**

Allow the engine to reach normal operating temperature.

With the scan tool, read DTCs.

#### Does the DTC reset?

**Yes** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> The VIN has been successfully programmed into the PCM. Test is complete.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0632-ODOMETER NOT PROGRAMMED IN PCM

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
Odometer is not programed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PROGRAMMING MILEAGE INTO THE PCM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAMMING MILEAGE INTO THE PCM

Ignition on, engine not running.

With the scan tool, erase DTCs.

Using a scan tool, program the mileage into the PCM.

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read DTCs.

#### Does the DTC reset?

**Yes** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> The mileage has been successfully programmed into the PCM. Test is complete.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0633-SKIM KEY NOT PROGRAMMED IN PCM**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The SKIM Key information has not been programmed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PROGRAMMING SKIM KEY INTO THE PCM PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. PROGRAMMING SKIM KEY INTO THE PCM**

Ignition on, engine not running.

With a scan tool, erase DTCs.

Using the scan tool, program the SKIM Key information into the PCM.

Start the engine.

**Note: If the engine will not start, crank the engine over for 15 seconds. Crank at least 2 times with the ignition switch returning to the off position each time.**

Allow the engine to reach normal operating temperature.

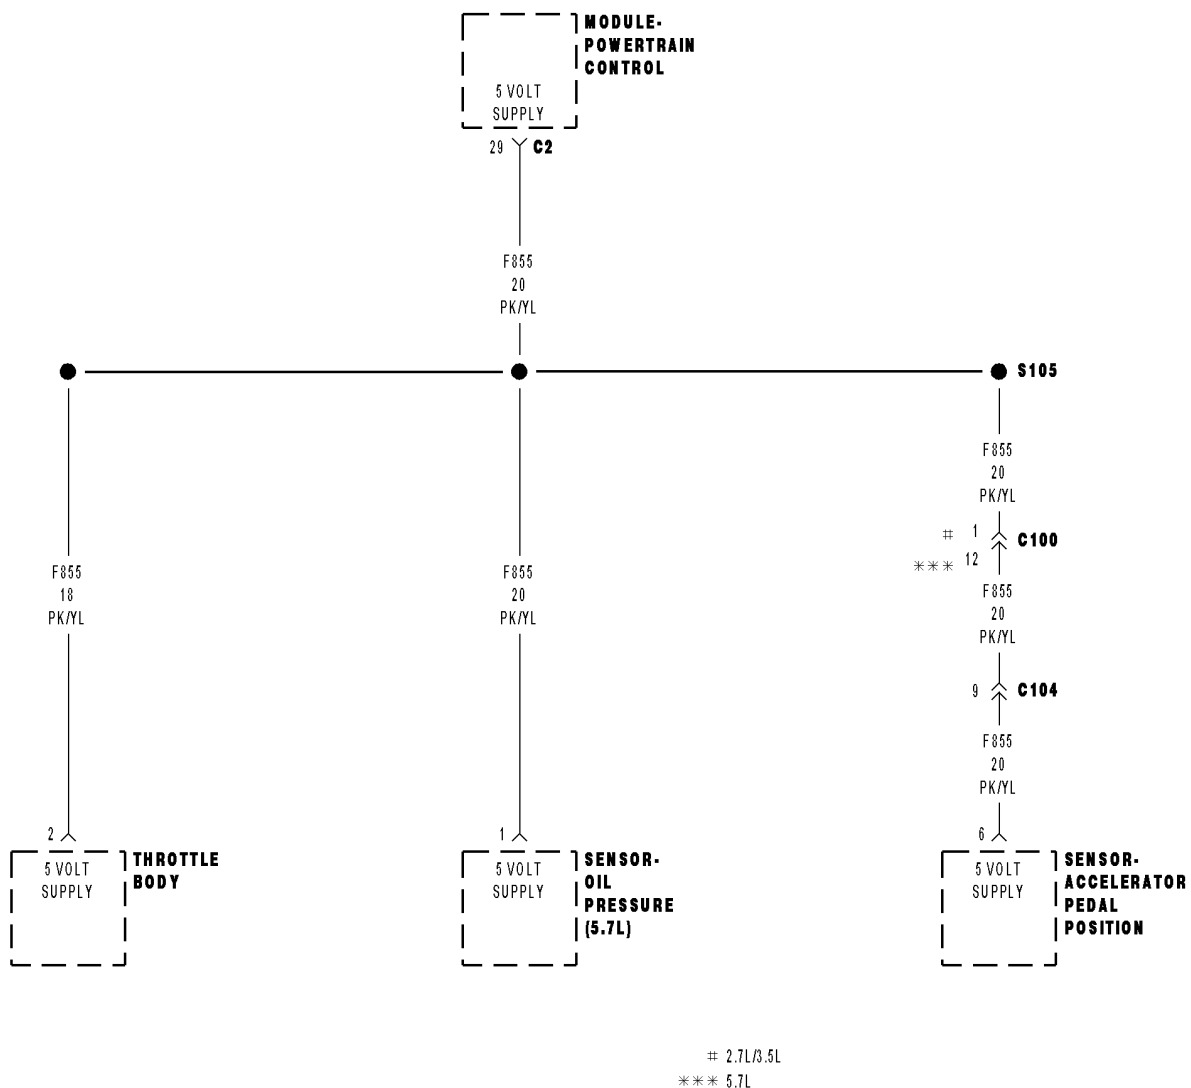

With the scan tool, read DTCs.

**Does the DTC reset?**

- Yes** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> The SKIM KEY information has been successfully programmed into the PCM. Test is complete.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P0642-SENSOR REFERENCE VOLTAGE 1 CIRCUIT LOW

P0642-SENSOR REFERENCE VOLTAGE 1 CIRCUIT LOW (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM recognizes the Primary 5-volt Supply circuit voltage is too low. One Trip Fault. ETC light is flashing.

Possible Causes
(F855) PRIMARY 5-VOLT SUPPLY SHORTED TO GROUND SENSOR SHORTED TO GROUND 5-VOLT SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note:** Improperly installed aftermarket accessories can cause this DTC to set. Check for wiring added by customer.

Is the DTC active at this time?

- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0642-SENSOR REFERENCE VOLTAGE 1 CIRCUIT LOW (CONTINUED)****2. (F855) PRIMARY 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F855) Primary 5-volt Supply circuit.

Measure the resistance between ground and the (F855) Primary 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) Primary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. 5-VOLT SENSOR**

Turn the ignition off.

Reconnect all the previously disconnected Sensors except for the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) Primary 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the voltage below 4.5 volts?**

**Yes** >> Go To 4

**No** >> Replace the CKP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0642-SENSOR REFERENCE VOLTAGE 1 CIRCUIT LOW (CONTINUED)****4. 5-VOLT SENSOR SHORTED TO GROUND**

Measure the voltage on the (F855) Primary 5-volt Supply circuit at the CKP Sensor harness connector.

**CAUTION:** You must Turn the Ignition OFF when disconnecting any of the Sensor harness connectors and Turn the Ignition On to check the voltage readings.

While monitoring the voltage, disconnect each Sensor harness connector that shares the (F855) Primary 5-volt Supply circuit, one at a time.

**Note:** Reconnect all the Sensors and clear all trouble codes before continuing.

**Does the voltage increase above 4.5 volts when disconnecting any of the remaining Sensors?**

- Yes** >> Replace the Sensor that causes the (F855) Primary 5-volt Supply circuit voltage to increase when disconnected.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 5

**5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P0643-PRIMARY 5-VOLT SUPPLY CIRCUIT HIGH

**P0643-PRIMARY 5-VOLT SUPPLY CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM recognizes the Primary 5-volt Supply circuit voltage is too high. One Trip Fault. ETC light is flashing.

Possible Causes
(F855) PRIMARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test**

**1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?**
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0643-PRIMARY 5-VOLT SUPPLY CIRCUIT HIGH (CONTINUED)****2. (F855) PRIMARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F855) Primary 5-volt Supply circuit.

**Note: Improperly installed aftermarket accessories can cause this DTC to set. Check for wiring added by customer.**

Ignition on, engine not running.

Measure the voltage on the (F855) Primary 5-volt Supply circuit at the CKP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (F855) Primary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

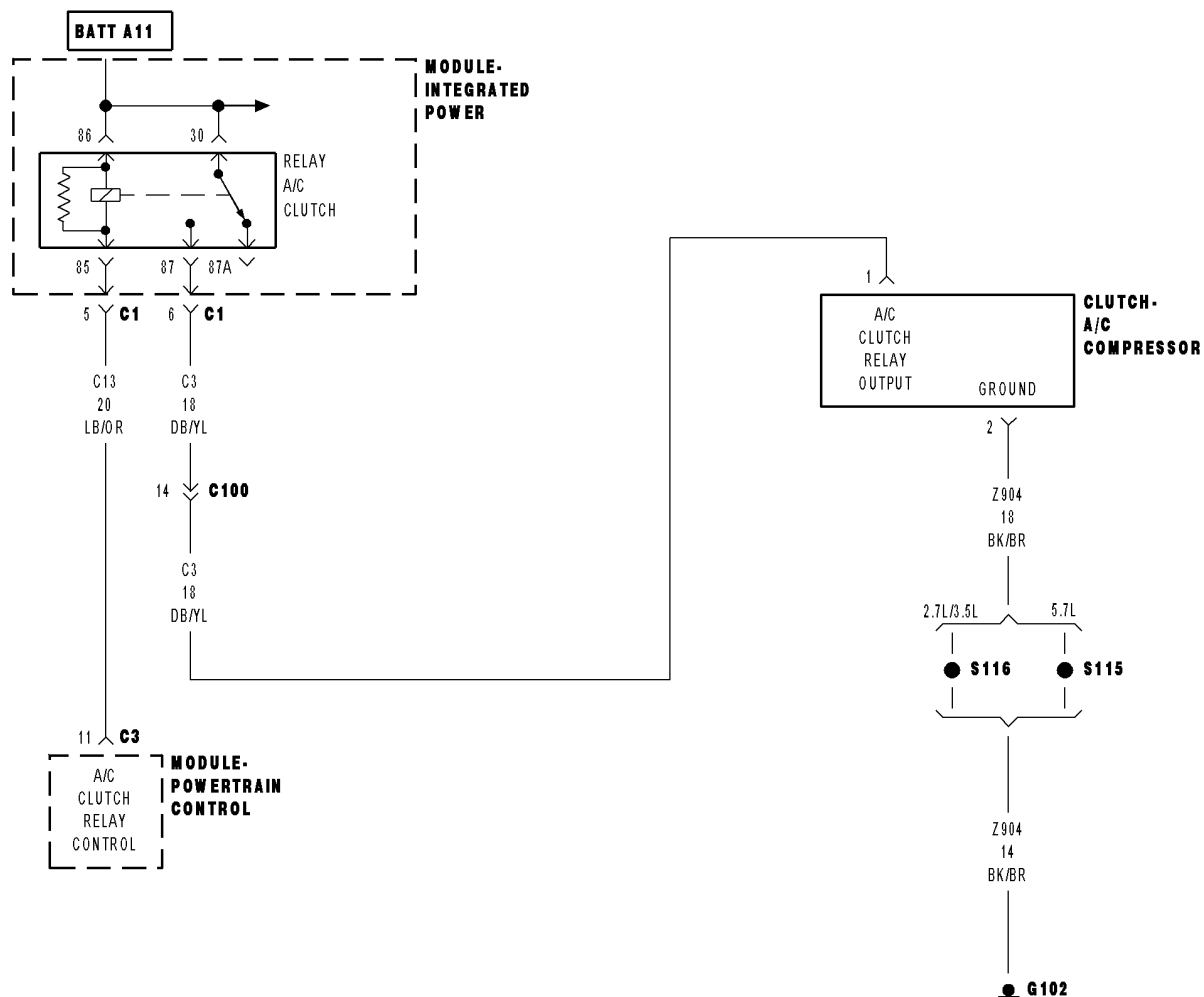

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0645-A/C CLUTCH RELAY CIRCUIT

## P0645-A/C CLUTCH RELAY CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on. Battery voltage greater than 10 volts. A/C Switch on.
- **Set Condition:**  
An open or shorted condition is detected in the A/C clutch relay control circuit. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
INTERNAL FUSED IGNITION SWITCH OUTPUT CIRCUIT (C13) A/C CLUTCH RELAY CONTROL CIRCUIT OPEN (C13) A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND A/C CLUTCH RELAY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

Ignition on, engine not running.

With a scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay operating?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 2

### 2. A/C CLUTCH RELAY RESISTANCE

Turn the ignition off.

Remove the A/C Clutch Relay from the IPM.

Measure the resistance of the A/C Clutch Relay Coil.

**Is the resistance between 60 to 80 ohms?**

- Yes** >> Go To 3
- No** >> Replace the A/C Clutch Relay.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0645-A/C CLUTCH RELAY CIRCUIT (CONTINUED)****3. INTERNAL FUSED B+ CIRCUIT**

Ignition on, engine not running.

Using a 12-volt test light connected to ground, probe the Internal Fused B+ circuit in the connection.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the Internal Fused B+ circuit. Check and replace any open fuses.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**4. (C13) A/C CLUTCH RELAY CONTROL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (C13) A/C Clutch Relay Control circuit from the relay connection to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (C13) A/C Clutch Relay Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**5. (C13) A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (C13) A/C Clutch Relay Control circuit at the IPM.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (C13) A/C Relay Clutch Control circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

---

**6. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

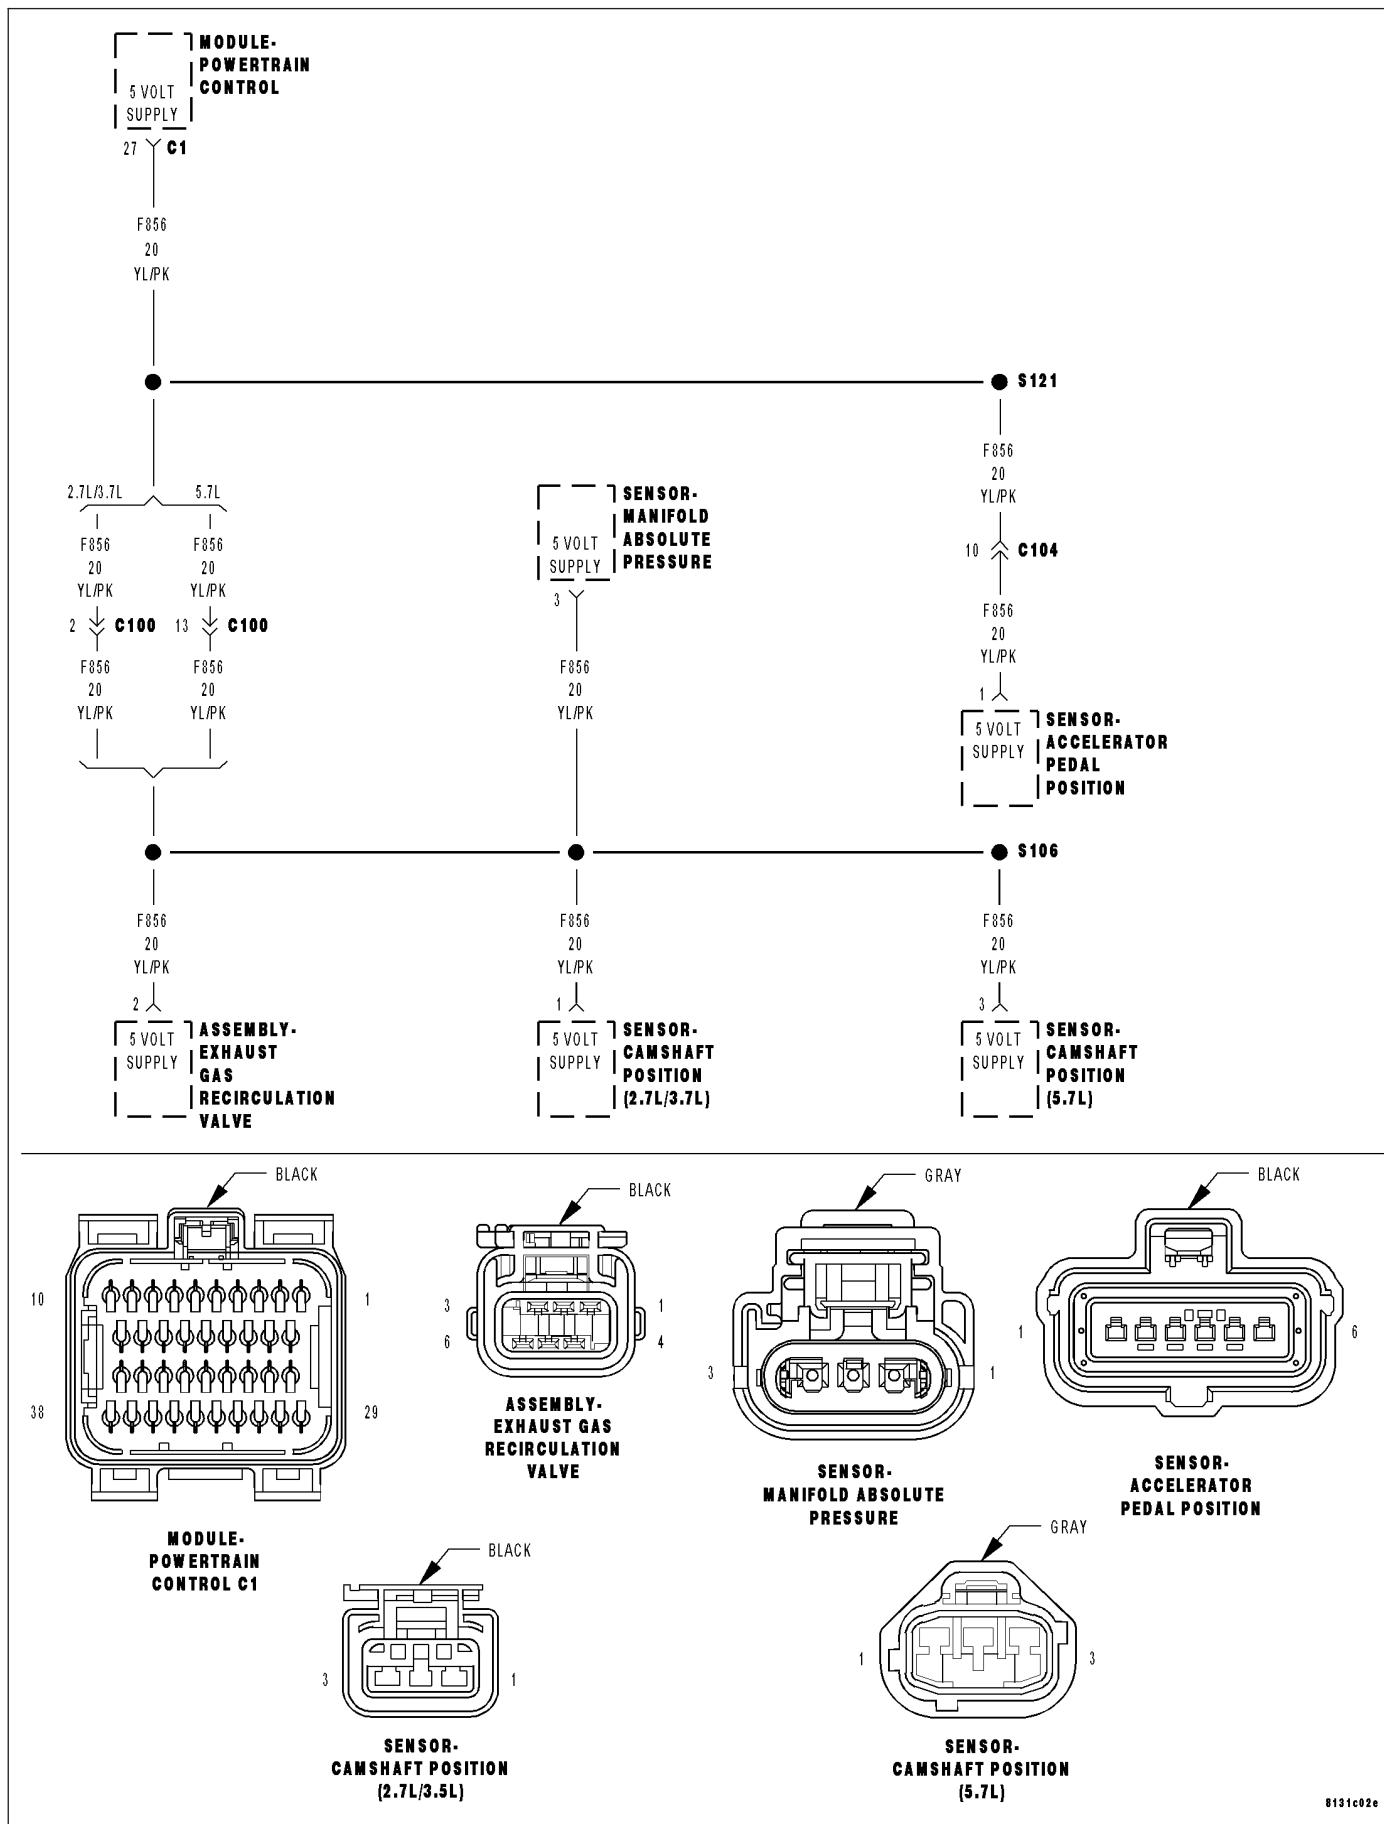

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

# P0652-SENSOR REFERENCE VOLTAGE 2 CIRCUIT LOW

P0652-SENSOR REFERENCE VOLTAGE 2 CIRCUIT LOW (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM recognizes the Auxiliary 5-volt Supply circuit voltage is too low One Trip Fault. ETC light is flashing.

Possible Causes
(F856)AUXILIARY 5-VOLT SUPPLY SHORTED TO GROUND SENSOR SHORTED TO GROUND CAM POSITION SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note:** Improperly installed aftermarket accessories can cause this DTC to set. Check for wiring added by customer.

Is the DTC active at this time?

- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0652-SENSOR REFERENCE VOLTAGE 2 CIRCUIT LOW (CONTINUED)

### 2. (F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F856) Auxiliary 5-volt Supply circuit.

Measure the resistance between ground and the (F856) Auxiliary 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) Auxiliary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

### 3. CMP SENSOR

Turn the ignition off.

Reconnect all the previously disconnected Sensors except for the CMP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the voltage below 4.5 volts?**

**Yes** >> Go To 4

**No** >> Replace the Cam Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0652-SENSOR REFERENCE VOLTAGE 2 CIRCUIT LOW (CONTINUED)****4. INTERNAL SENSOR SHORTED**

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit at the CMP Sensor harness connector.

**CAUTION:** You must Turn the Ignition OFF when disconnecting any of the Sensor harness connectors and Turn the Ignition On to check the voltage readings.

While monitoring the voltage, disconnect each Sensor harness connector that shares the (F856) Auxiliary 5-volt Supply circuit, one at a time.

**Does the voltage increase above 4.5 volts when disconnecting any of the Sensor harness connectors?**

**Yes** >> Replace the Sensor that causes the (F856) Auxiliary 5-volt Supply circuit voltage to increase when disconnected.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P0653-SENSOR REFERENCE VOLTAGE 2 CIRCUIT HIGH

**P0653-SENSOR REFERENCE VOLTAGE 2 CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM recognizes the Auxiliary 5-volt Supply circuit voltage is too high. One Trip Fault. ETC light is flashing.

Possible Causes
(F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test**

**1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

- Is the DTC active at this time?**
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0653-SENSOR REFERENCE VOLTAGE 2 CIRCUIT HIGH (CONTINUED)****2. (F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F856) Auxiliary 5-volt Supply circuit.

**Note: Improperly installed aftermarket accessories can cause this DTC to set. Check for wiring added by customer.**

Ignition on, engine not running.

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit at the CMP Sensor harness connector.

**Is the voltage present?**

**Yes** >> Repair the short to battery voltage in the (F856) Auxiliary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

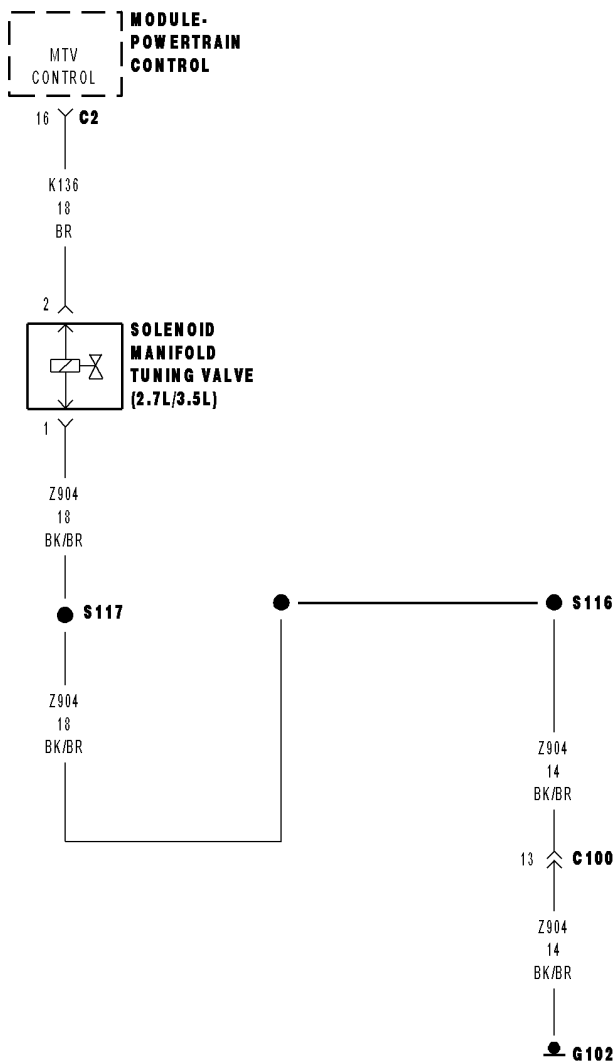

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0660—MANIFOLD TUNE VALVE SOLENOID CIRCUIT**

**P0660-MANIFOLD TUNE VALVE SOLENOID CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. ASD Relay energized. Battery voltage greater than 10 volts.

- **Set Condition:**

The PCM senses the MTV in not at the desired state. One Trip Fault.

Possible Causes
MTV (Z904) GROUND CIRCUIT OPEN (K136) MTV CONTROL CIRCUIT SHORT TO BATTERY VOLTAGE (K136) MTV CONTROL CIRCUIT SHORT TO GROUND (K136) MTV CONTROL CIRCUIT OPEN MANIFOLD TUNED VALVE SOLENOID PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTC.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0660-MANIFOLD TUNE VALVE SOLENOID CIRCUIT (CONTINUED)****2. MANIFOLD TUNE VALVE SOLENOID OPERATION**

Turn the ignition off.

Disconnect the MTV Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, connect one end to the (K136) MTV Control circuit and the other end the (Z904) Ground circuit in the MTV Solenoid harness connector.

With the scan tool, actuate (Toggle) the MTV Solenoid.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Manifold Tune Valve Solenoid.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. MTV SOLENOID (Z904) GROUND CIRCUIT OPEN**

Measure the resistance between the Ground circuit in the MTV Solenoid harness connector and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the MTV Solenoid Ground circuit.  
Perform POWERTRAIN VERIFICATION TEST VER — 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0660-MANIFOLD TUNE VALVE SOLENOID CIRCUIT (CONTINUED)****4. (K136) MTV CONTROL CIRCUIT SHORT TO BATTERY VOLTAGE**

Turn the ignition off

Disconnect the PCM harness connectors.

Turn the ignition on.

Measure the voltage of the (K136) MTV Control circuit in the MTV Solenoid harness connector.

**Does the voltage indicate voltage present?**

**Yes** >> Repair the short to voltage in the (K136) MTV Control circuit.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K136) MTV CONTROL CIRCUIT SHORT TO GROUND**

Turn the ignition off.

Measure the resistance between the (K136) MTV Control circuit in the MTV Solenoid harness connector and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K136) MTV Control circuit.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0660-MANIFOLD TUNE VALVE SOLENOID CIRCUIT (CONTINUED)****6. (K136) MTV CONTROL CIRCUIT OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K136) MTV Control circuit between from the MTV Solenoid harness connector to the appropriate terminal of the special tool.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K136) MTV Control circuit.  
Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)  
Go To 7

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

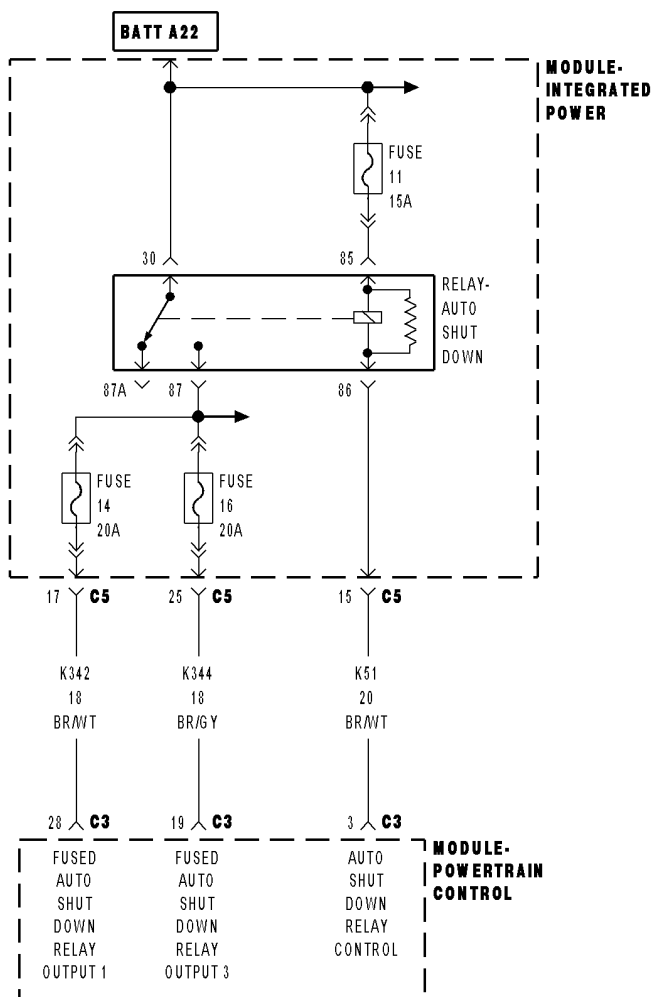

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0685-AUTO SHUTDOWN RELAY CONTROL CIRCUIT

**MODULE-  
POWERTRAIN  
CONTROL C3**

P0685-AUTO SHUTDOWN RELAY CONTROL CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With ignition on. Battery voltage above 10 volts.
- **Set Condition:**  
An open or shorted condition is detected in the ASD relay control circuit. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(A922) FUSED B+ CIRCUITS (K51) ASD RELAY CONTROL CIRCUIT OPEN (K51) ASD RELAY CONTROL CIRCUIT SHORTED TO GROUND ASD RELAY PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ASD RELAY OPERATION

Ignition on, engine not running.  
With a scan tool, actuate the ASD Relay.

- Is the ASD Relay operating?**
- Yes**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**    >> Go To 2

**P0685-AUTO SHUTDOWN RELAY CONTROL CIRCUIT (CONTINUED)****2. (A922) FUSED B+ CIRCUITS**

Turn the ignition off.

Remove the ASD Relay from the IPM.

Using a 12-volt test light connected to ground, probe the (A922) Fused B+ circuits in the IPM.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A922) Fused B+ circuits. Inspect and replace any open fuses.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. ASD RELAY**

Measure the resistance of the ASD Relay Coil.

**Is the resistance between 60 to 80 ohms?**

**Yes** >> Go To 4

**No** >> Replace the ASD Relay.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0685-AUTO SHUTDOWN RELAY CONTROL CIRCUIT (CONTINUED)****4. (K51) ASD RELAY CONTROL CIRCUIT OPEN**

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K51) ASD Relay Control circuit from the IPM to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K51) ASD Relay Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K51) ASD RELAY CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K51) ASD Relay Control circuit in the IPM.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K51) ASD Relay Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P0685-AUTO SHUTDOWN RELAY CONTROL CIRCUIT (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

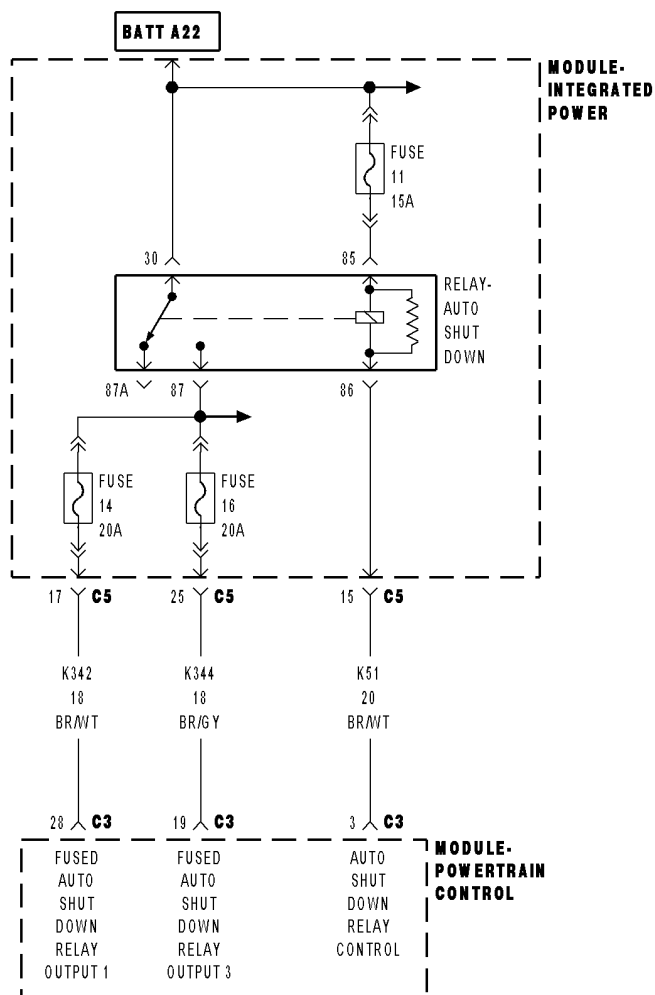

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**P0688-AUTO SHUTDOWN RELAY SENSE CIRCUIT LOW**

**P0688-AUTO SHUTDOWN RELAY SENSE CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With ignition key on. Battery voltage greater than 10 volts.
- **Set Condition:**  
No voltage sensed at the PCM when the ASD relay is energized. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(A922) FUSED B+ CIRCUITS (A955) ASD RELAY OUTPUT CIRCUIT OPEN ASD RELAY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. VERIFY ASD DTC**

**Note: Diagnose P0685 - Auto Shutdown Relay Control Circuit first if it set along with this DTC.**

With a scan tool, erase the DTC.

Attempt to start the engine. If the engine will not start, crank the engine for at least 15 seconds. It may be necessary to repeat several times.

**Does the DTC reset?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**2. ENGINE OPERATION**

Attempt to start the engine.

**Does the engine start?**

- Yes** >> Go To 3
- No** >> Go To 4

**P0688-AUTO SHUTDOWN RELAY SENSE CIRCUIT LOW (CONTINUED)****3. (A955) ASD RELAY OUTPUT CIRCUIT OPEN**

Turn the ignition off.

Remove the ASD Relay.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (A955) ASD Relay Output circuit from the Relay connection to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (A955) ASD Relay Output circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**4. ASD RELAY**

Turn the ignition off.

Install a substitute relay in place of the ASD Relay.

Ignition on, engine not running.

With a scan tool, erase DTCs.

Attempt to start the engine.

With a scan tool, read DTCs.

**Does the DTC reset?**

**Yes** >> Go To 5

**No** >> Replace the ASD Relay.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P0688-AUTO SHUTDOWN RELAY SENSE CIRCUIT LOW (CONTINUED)

### 5. (A922) FUSED B+ CIRCUITS

Turn the ignition off.

Using a 12-volt test light connected to ground, probe the (A922) Fused B+ circuits at the Relay connection.

**Does the test light illuminate brightly?**

**Yes** >> Go To 6

**No** >> Repair the open or short to ground in the (A922) Fused B+ circuits. Inspect the related fuse and repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 6. (A955) RELAY OUTPUT CIRCUIT OPEN

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (A955) ASD Relay Output circuit from the Relay connection to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (A955) ASD Relay Output circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0688-AUTO SHUTDOWN RELAY SENSE CIRCUIT LOW (CONTINUED)****7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P0700-TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**  
An active DTC is stored in the TCM. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
DTC PRESENT IN THE TRANSMISSION CONTROL MODULE

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. DTC PRESENT IN EATX CONTROLLER

This is an informational DTC letting you know that a DTC(s) is stored in the Transmission Control Module.

Erase this DTC from the PCM after all Transmission DTC(s) have been repaired.

Using a scan tool, read the Transmission Controller DTC and refer to the Transmission Category and perform the appropriate symptom.

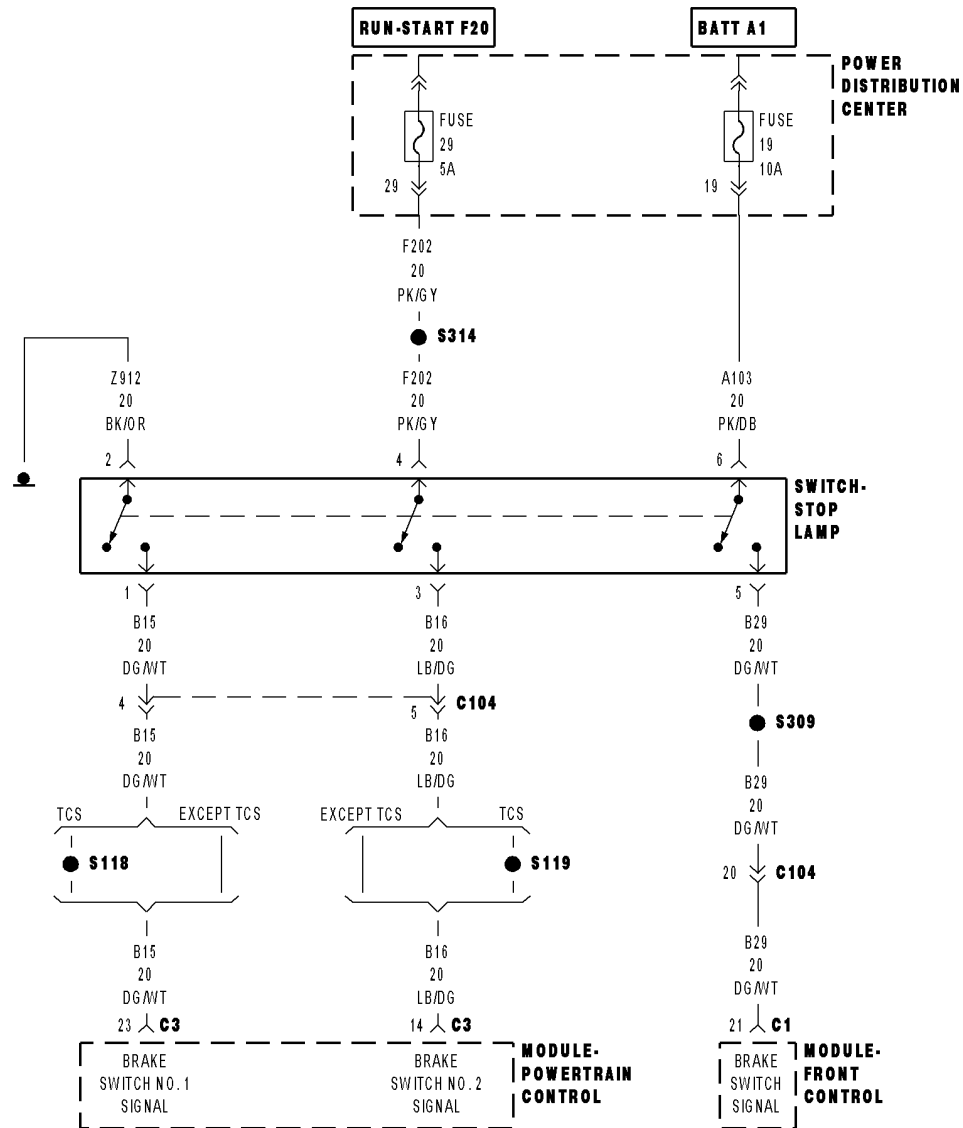

**PCM Diagnostic Information complete.**

**Continue**

Test Complete.

## P0703-BRAKE SWITCH 2 PERFORMANCE

**P0703-BRAKE SWITCH 2 PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

When the PCM recognizes Brake Switch No.2 voltage is not equal to the applied value at the PCM when Brake Switch No.1 is applied. This could be a normal condition. If this condition is seen repeatedly by the PCM the fault is set. Cruise will not work for the rest of the key cycle.

Possible Causes
(A103) FUSED B+ CIRCUIT
(L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT OPEN
(L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO BATTERY VOLTAGE
(L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO GROUND
(B29) BRAKE SWITCH NO.1 SIGNAL CIRCUIT OPEN
STOP LAMP SWITCH
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Make sure the Stop Lamp Switch is adjusted properly before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B29) Brake Switch No.1 and (L50) Brake Lamp Switch Output are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0703-BRAKE SWITCH 2 PERFORMANCE (CONTINUED)****2. (A103) FUSED B+ CIRCUIT**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Using a 12-volt test light connected to ground, probe the (A103) Fused B+ circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A103) Fused B+ circuit. Inspect the related fuse and repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. STOP LAMP SWITCH**

Turn the ignition off.

Measure the resistance between the (A103) Fused B+ circuit terminal and the (L50) Brake Lamp Switch Output terminal in the Stop Lamp Switch.

Measure the resistance between the (Z429) Ground circuit terminal and the (K29) Brake Switch No.1 Signal terminal in the Stop Lamp Switch.

Apply and release the brake pedal while monitoring the ohmmeter.

**Does the resistance change from below 5.0 ohms to open circuit for each circuit check?**

**Yes** >> Go To 4

**No** >> Replace the Stop Lamp Switch.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0703-BRAKE SWITCH 2 PERFORMANCE (CONTINUED)****4. (L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO BATTERY VOLTAGE**

Disconnect the PCM harness connectors.

Measure the voltage on the (L50) Brake Lamp Switch Output circuit in the Stop Lamp Switch harness connector.

Ignition on, engine not running.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (L50) Brake Lamp Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (L50) Brake Lamp Switch Output circuit from the Stop Lamp Switch harness connector to the C1 FCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (L50) Brake Lamp Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0703-BRAKE SWITCH 2 PERFORMANCE (CONTINUED)****6. (L50) BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (L50) Brake Lamp Switch Output circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (L50) Brake Lamp Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (B29) BRAKE SWITCH NO.1 SIGNAL CIRCUIT OPEN**

Measure the resistance of the (B29) Brake Switch No.1 Signal circuit from the Stop Lamp Switch harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (B29) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P0703-BRAKE SWITCH 2 PERFORMANCE (CONTINUED)****8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P0850-PARK/NEUTRAL SWITCH PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Continuously with the transmission in Park, Neutral, or Drive and NOT in Limp-in mode.
- **Set Condition:**  
This code will set if the PCM detects an incorrect Park/Neutral switch state for a given mode of vehicle operation. One trip fault. Three good trips to turn off the MIL.

Possible Causes
TCM/COMMUNICATION
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### Diagnostic Test

#### 1. P/N & D/R NOT IN CORRECT POSITION

**Note:** Before continuing, ensure communication can be established with the TCM. If the scan tool is unable to communicate with the TCM or if there are related communication DTCs present refer to the Communication Category and perform the appropriate symptom.

Ignition on, engine not running.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2 (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING).

#### 2. CHECKING TCM DTC(S)

Turn the ignition off.

With the scan tool, read TCM DTCs.

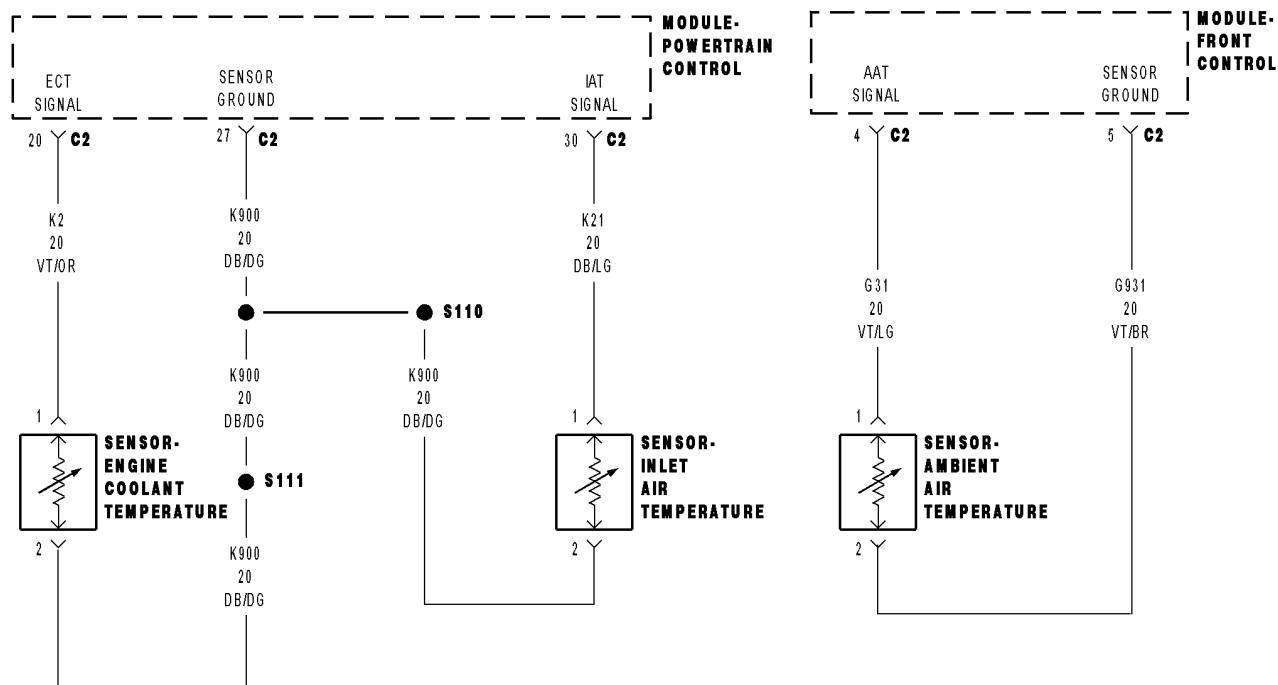

**Is there any there Transmission DTC(s) present?**

**Yes** >> Refer to the appropriate Transmission symptom in the Transmission category.

**No** >> Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Module in accordance with the Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P1115-GENERAL TEMPERATURE RATIONALITY

**P1115-GENERAL TEMPERATURE RATIONALITY (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and battery voltage greater than 10 volts.

- **Set Condition:**

Ambient Air, Engine Coolant, and Intake Air Temp sensor inputs are compared under cold start conditions. After start up the temp readings are monitored. If two of the three readings agree and the third doesn't, a DTC is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXCESSIVE RESISTANCE IN THE SENSOR SIGNAL CIRCUIT
EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT
TEMPERATURE SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read the DTCs.

**Note:** All ECT, Intake Air, and Ambient Air Temperature Sensor codes must be diagnosed and repaired before continuing.

**Note:** In cold weather, this DTC could be set by a non-OEM approved block heater and no repair would be required.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. TEMPERATURE SENSOR CIRCUIT

With a scan tool, read the ECT, Ambient Air Temp, and Intake Air Temp Sensor temp values.

Start the engine.

Allow the engine to reach normal operating temperature while monitoring the three Sensor temperature values.

**Is the temperature for each of the Sensors increasing properly?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P1115-GENERAL TEMPERATURE RATIONALITY (CONTINUED)****3. TEMPERATURE SENSOR**

Ignition on, engine not running.

Disconnect the suspected faulty sensor.

Connect a jumper wire between the Sensor Signal circuit and the (K900) Sensor ground circuit.

With the scan tool, read the voltage of the suspected Sensor.

**Note:** Remove the jumper wire before continuing.

**Did the voltage reading start at 4.8 to 5.0 volts and decrease to 0 volts when the jumper wire was installed?**

**Yes** >> Replace the faulty Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. EXCESSIVE RESISTANCE IN THE TEMPERATURE SENSOR SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the Sensor Signal circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms.**

**Yes** >> Repair the excessive resistance in the Temperature Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor ground circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms.**

**Yes** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P1115-GENERAL TEMPERATURE RATIONALITY (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

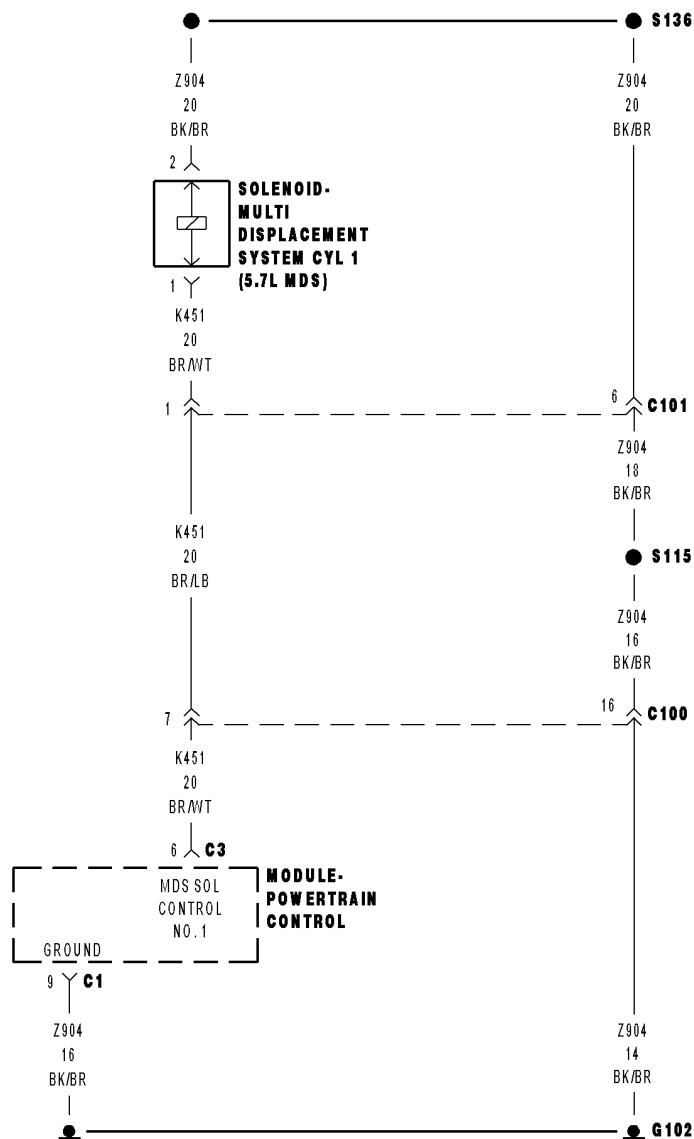

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P1411–CYLINDER 1 REACTIVATION CONTROL PERFORMANCE

**P1411-CYLINDER 1 REACTIVATION CONTROL PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
The MDS fails to active and take place for cylinder 1.

Possible Causes
(K451) MDS SOLENOID NO.1 CONTROL SHORT TO GROUND (K451) MDS SOLENOID NO.1 CONTROL OPEN (Z904) GROUND CIRCUIT OPEN INSUFFICIENT OIL PRESSURE ACTING ON THE LIFTER LOCKING PINS OIL PASSAGES RESTRICTED LIFTER MDS SOLENOID NO.1 PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1411-CYLINDER 1 REACTIVATION CONTROL PERFORMANCE (CONTINUED)****2. MDS SOLENOID NO.1**

Turn the ignition off.

Gain access to the MDS Solenoid No.1.

Disconnect the MDS Solenoid No.1 harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to the (Z904) Ground circuit, probe the (K451) MDS Solenoid No.1 Control circuit.

With a scan tool, actuate the MDS Solenoid 1.

**Does the 12-volt test light flash on and off?**

**Yes** >> Go To 7

**No** >> Go To 3

**3. (Z904) GROUND CIRCUIT OPEN**

Turn the ignition off.

Using a 12-volt test light connected to the 12-volts, probe the (Z904) Ground circuit in the MDS Solenoid No.1 harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open in the (Z904) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**7. MDS SOLENOID 1**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Reconnect the Solenoid connector.

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 1.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 8

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 1. If the passages are not clogged with debris, replace the MDS Solenoid 1.

---

**8. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 1 of the engine block.

Remove the Bank 1 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

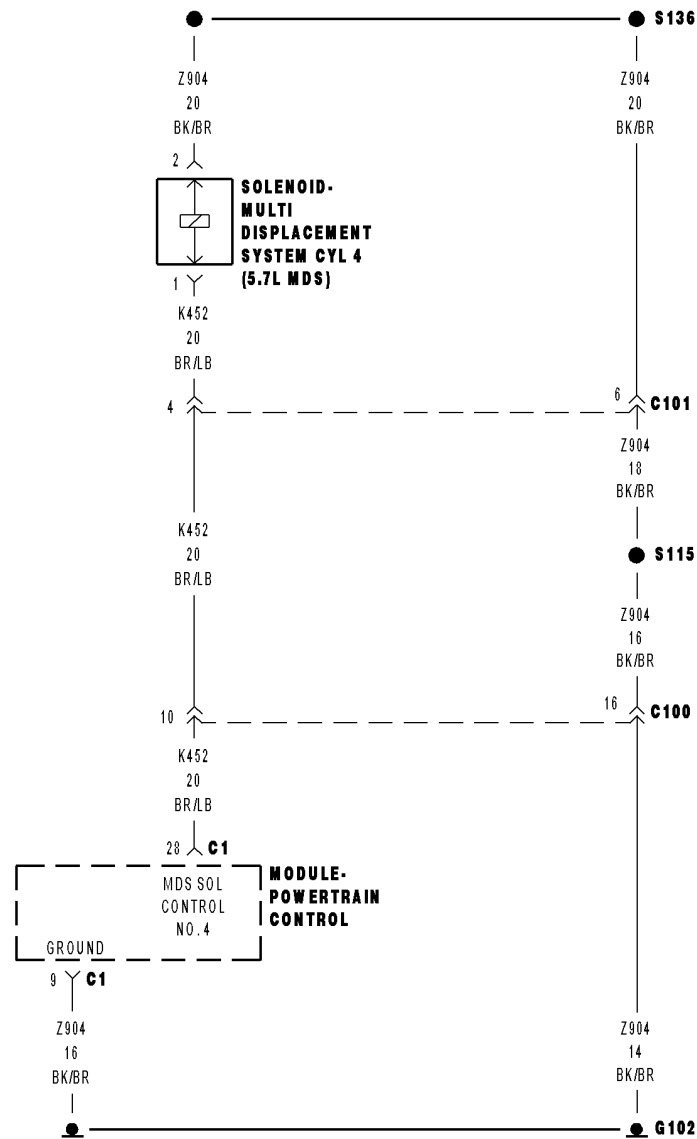

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

**No** >> Replace both sets of lifters if no other possible causes remain.

---

**P1414—CYLINDER 4 REACTIVATION CONTROL PERFORMANCE**

## P1414-CYLINDER 4 REACTIVATION CONTROL PERFORMANCE (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

### Theory of Operation

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
The MDS fails to active and take place for cylinder 4.

Possible Causes
(K452) MDS SOLENOID NO.4 CONTROL SHORT TO GROUND (K452) MDS SOLENOID NO.4 CONTROL OPEN (Z904) GROUND CIRCUIT OPEN INSUFFICIENT OIL PRESSURE ACTING ON THE LIFTER LOCKING PINS OIL PASSAGES RESTRICTED LIFTER MDS SOLENOID NO.4 PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Yes** >> Go To 4

**No** >> Repair the open in the (Z904) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P1417-CYLINDER 7 REACTIVATION CONTROL PERFORMANCE (CONTINUED)

### 4. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance between ground and the (K454) MDS Solenoid No.7 Control circuit in the MDS Solenoid No.7 harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

### 5. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K454) MDS Solenoid No.7 Control circuit from the MDS Solenoid No.7 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1417-CYLINDER 7 REACTIVATION CONTROL PERFORMANCE (CONTINUED)****6. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. MDS SOLENOID 7**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Reconnect the Solenoid harness connector.

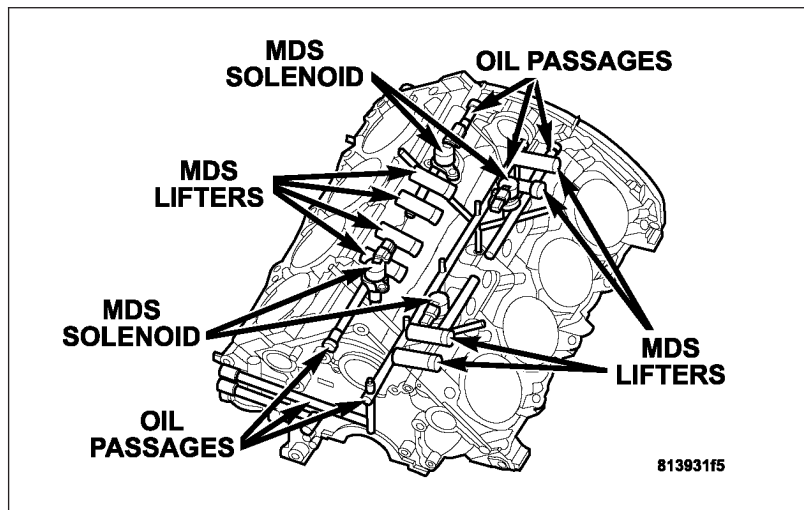

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 7.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 8

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 7. If the passages are not clogged with debris, replace the MDS Solenoid 7.

**8. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 1 of the engine block.

Remove the Bank 1 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

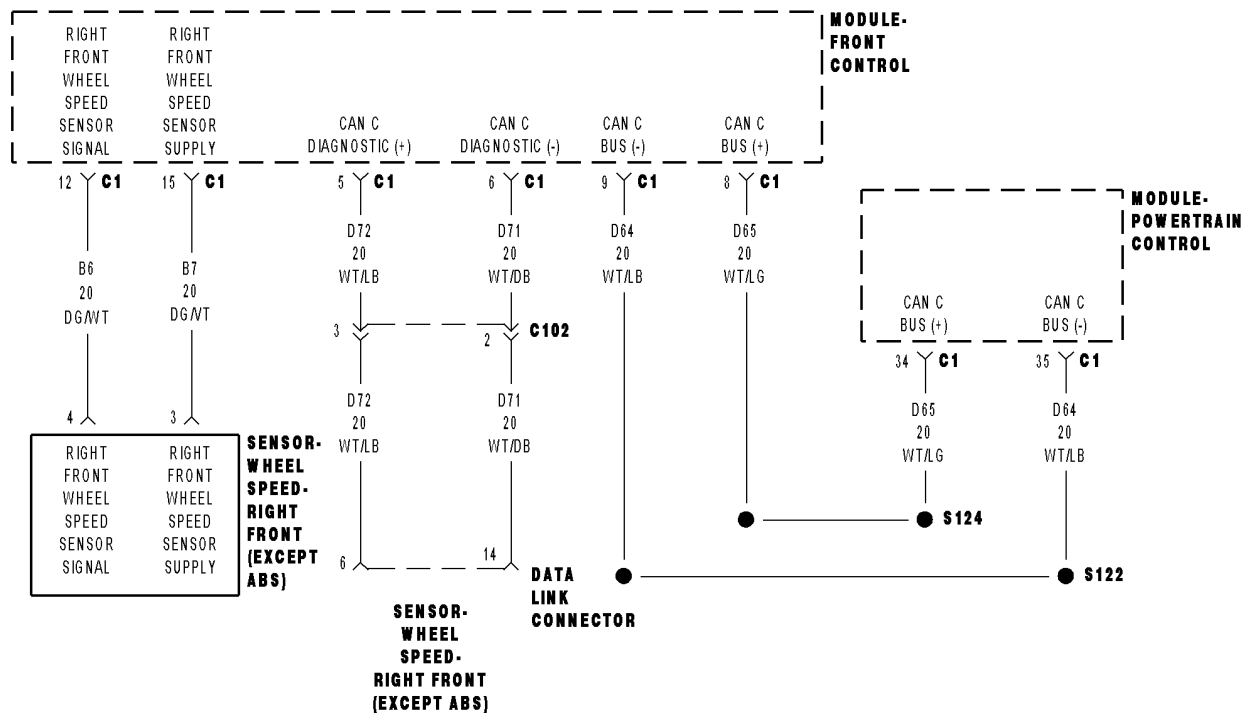

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

**No** >> Replace both sets of lifters if no other possible causes remain.

# P1501-VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS (Not Equipped with ABS)

**P1501-VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS (Not Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on, vehicle moving. Speed control is learned and the speed control is trying to be activated.
- **Set Condition:**  
The PCM recognizes rear wheel speed is greater than the front wheel speed.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCS
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

**Note:** The following items must be checked before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the Front Control Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All Vehicle Speed DTCs that may be active in the Front Control Module or in the Transmission Control Module **MUST** be diagnosed.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**2. VISUAL INSPECTION**

**Note:** This code can set due to the following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1501–VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS (Not Equipped with ABS) (CONTINUED)****No** >> Go To 3

---

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

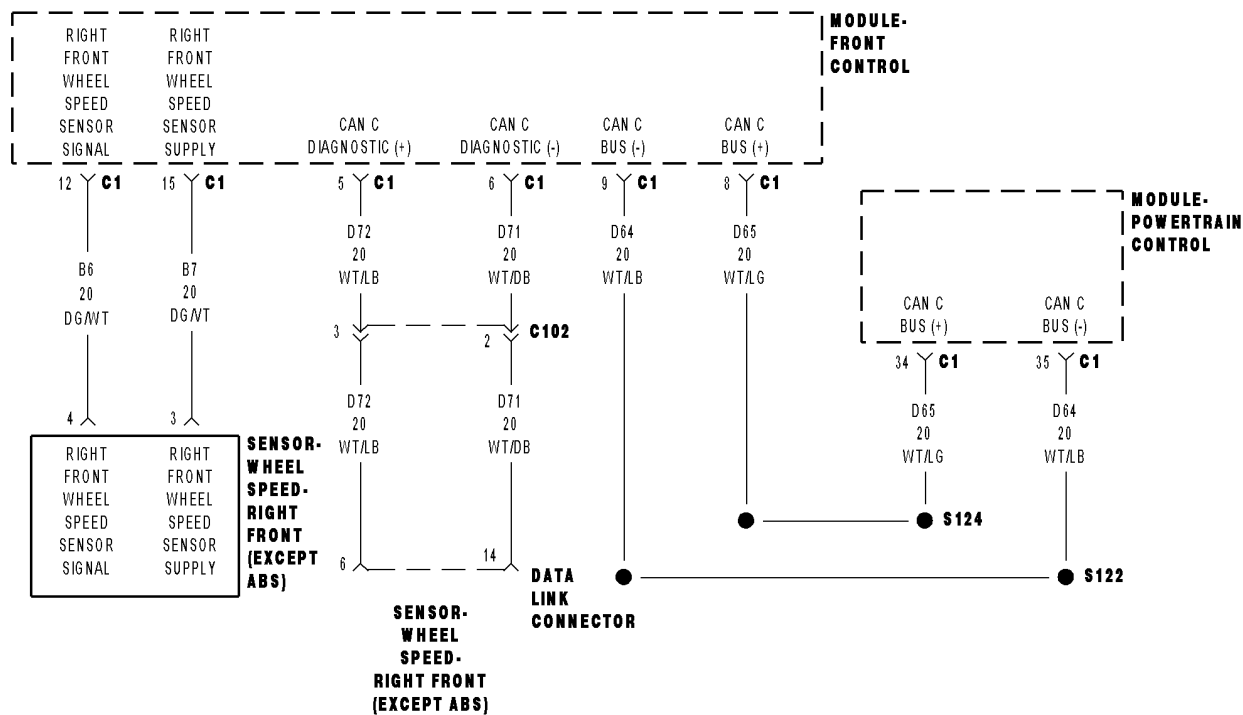

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P1502-VEHICLE SPEED SENSOR 1/2 CORRELATION — NON DRIVE WHEELS (Not Equipped with ABS)

**P1502-VEHICLE SPEED SENSOR 1/2 CORRELATION — NON DRIVE WHEELS****(Not Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and vehicle moving. Brake pedal must not be applied.
- **Set Condition:**  
The PCM recognizes the front wheel speed is greater than the rear wheel speed.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCS
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

**Note:** The following items must be checked before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the Front Control Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All Vehicle Speed DTCs that may be active in the Front Control Module or in the Transmission Control Module **MUST** be diagnosed.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1502-VEHICLE SPEED SENSOR 1/2 CORRELATION — NON DRIVE WHEELS  
(Not Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due to the following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

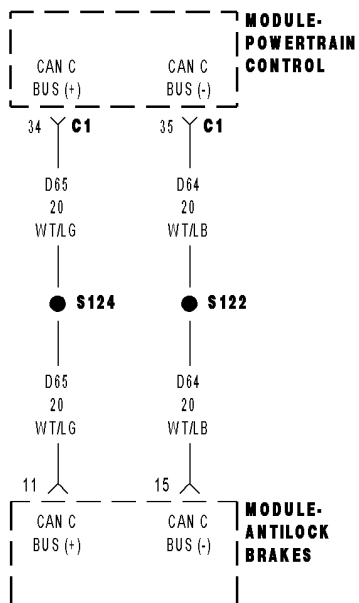

**Were there any problems found?**

**Yes** >> Repair as necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P1501-VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS (Equipped with ABS)

**P1501-VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS**  
**(Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and the vehicle moving. Speed control is learned and the speed control is trying to be activated.
- **Set Condition:**  
The PCM recognizes the rear wheel speed is greater than the front wheel speed.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCS
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** The following items must be performed before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the ABS Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All related Vehicle Speed and Wheel Speed DTCs that may be active in the ABS Module **MUST** be diagnosed. Refer to the ABS diagnostic information for the correct procedure.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes**    >> Go To 2

**No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1501-VEHICLE SPEED SENSOR 1/2 CORRELATION — DRIVE WHEELS**  
**(Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due to the following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P1521—INCORRECT ENGINE OIL TYPE

- **When Monitored:**

Engine Running.

- **Set Condition:**

Using the oil pressure, oil temperature and other vital engine inputs the PCM can determine the engine oil viscosity. Incorrect viscosity will effect the operation of the MDS by delaying cylinder activation.

Possible Causes
INCORRECT ENGINE OIL TYPE ENGINE OIL CONTAMINATION ENGINE OIL

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### Diagnostic Test

#### 1. ACTIVE DTC

**Note:** Review the customers oil change history. Ensure the customers is using the correct engine oil viscosity. If the incorrect oil is being used, change the oil, using the correct engine oil viscosity.

Ignition on, engine off.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go to 2

**No** >> Test Complete.

#### 2. ENGINE OIL

**Note:** If set along with P1521, repair any engine oil pressure or temperature DTCs first before continuing.

The following conditions must be checked.

- OEM recommended oil viscosity is being used.
- Customer is following the oil change schedule.
- Check the engine oil for contamination. (i.e., fuel and/or engine coolant)
- Internal engine condition that may effect oil pressure.

**Were any of the above condition found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER — 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Change the engine oil using the correct oil viscosity.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER — 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P1572-BRAKE SWITCH STUCK ON

### P1572-BRAKE SWITCH STUCK ON (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 Ignition on.
- Set Condition:**  
 The PCM recognizes the Brake Switch #1 is mechanically stuck in the low/on position. One Trip Fault.

Possible Causes
(B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND (B16) BRAKE SWITCH NO.2 SIGNAL OPEN (F202) FUSED IGNITION SWITCH OUTPUT OPEN STOP LAMP SWITCH PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Make sure the Stop Lamp Switch is properly adjusted before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (B16) Brake Lamp Switch No.2 circuit are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.

**P1572-BRAKE SWITCH STUCK ON (CONTINUED)****2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.

**No** >> Go To 3

**3. (B16) BRAKE SWITCH NO.2 SIGNAL OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (B16) Brake Switch No.2 Signal circuit from the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.

**P1572-BRAKE SWITCH STUCK ON (CONTINUED)****4. (B16) BRAKE SWITCH NO.2 SIGNAL SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the Brake Switch No.2 Signal circuit in the Stop Lamp Switch harness connector.

**Does the voltmeter indicate voltage present?**

- Yes** >> Repair the short to voltage in the (B16) Brake Switch No.2 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.
- No** >> Go To 5

**5. STOP LAMP SWITCH**

Remove the Stop Lamp Switch.

Measure the resistance between terminals 1 and 2 of the Stop Lamp Switch.

Next, measure the resistance between terminals 3 and 4 of the Stop Lamp Switch.

Apply and release the brake pedal while monitoring the ohmmeter during both of the above steps.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

- Yes** >> Go To 6
- No** >> Replace the Stop Lamp Switch.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.

**6. PCM**

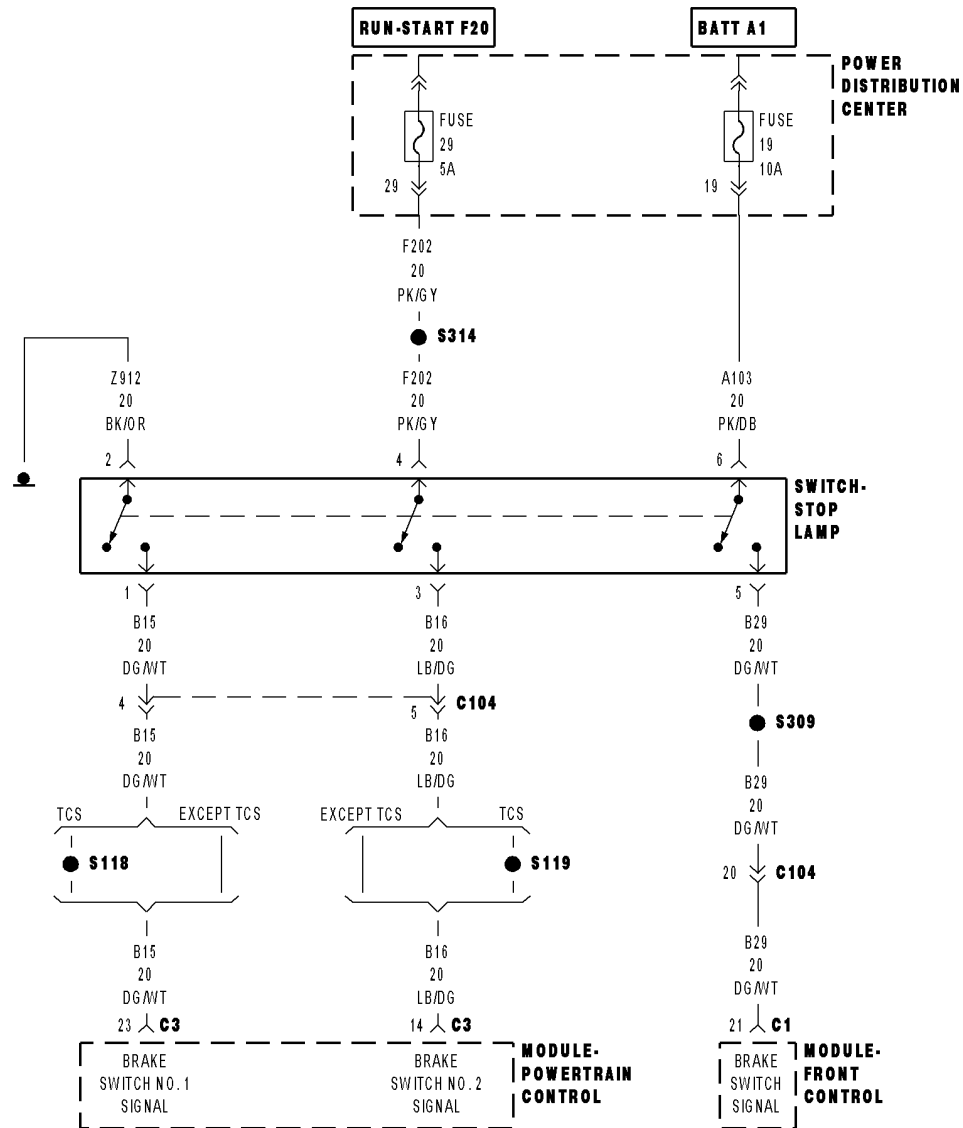

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.

## P1573-BRAKE SWITCH STUCK OFF

## P1573-BRAKE SWITCH STUCK OFF (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM recognizes Brake Switch No.1 is stuck in the Off/high position. One Trip Fault.

Possible Causes
(B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND (B15) BRAKE SWITCH NO.1 SIGNAL SHORT TO VOLTAGE (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND (B16) BRAKE SWITCH NO.2 SIGNAL OPEN (Z912) GROUND CIRCUIT OPEN (F202) FUSED IGNITION SWITCH OUTPUT OPEN STOP LAMP SWITCH PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Make sure the Stop Lamp Switch is properly adjusted before continuing.

**Note:** Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (B16) Brake Lamp Switch No.2 circuits are not switched at the harness connector.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1573-BRAKE SWITCH STUCK OFF (CONTINUED)****2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (B15) BRAKE SWITCH NO.1 SIGNAL SHORT TO VOLTAGE**

Turn the ignition on.

Measure the voltage of the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Does the voltmeter indicate voltage present?**

**Yes** >> Repair the short voltage in the (B15) Brake Switch No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (B16) BRAKE SWITCH NO.2 SIGNAL SHORTED TO GROUND**

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Disconnect the PCM harness connectors.

Measure the resistance between ground and the (B16) Brake Switch No.2 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

## P1573-BRAKE SWITCH STUCK OFF (CONTINUED)

### 5. (B16) BRAKE SWITCH NO.2 SIGNAL OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (B16) Brake Switch No.2 Signal circuit from the Stop Lamp Switch harness connector and the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (B16) Brake Switch No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 6. (F202) FUSED IGNITION SWITCH OUTPUT (RUN-START) OPEN

Re connect the PCM harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, probe the (F202) Fused Ignition Switch Output circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F202) Fused Ignition Switch Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1573-BRAKE SWITCH STUCK OFF (CONTINUED)****7. (Z912) GROUND CIRCUIT OPEN**

Using the 12-Volt test light connect to battery voltage, probe the (Z912) Ground circuit in the Stop Lamp Switch harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 8

**No** >> Repair the open in the (Z912) Ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**8. STOP LAMP SWITCH**

Remove the Stop Lamp Switch.

Measure the resistance between terminals 1 and 2 of the Stop Lamp Switch.

Next, measure the resistance between terminals 3 and 4 of the Stop Lamp Switch.

Apply and release the brake pedal while monitoring the ohmmeter during both of the above steps.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

**Yes** >> Go To 9

**No** >> Replace the Stop Lamp Switch.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 4.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P1593—SPEED CONTROL SWITCH 1/2 STUCK

**P1593–SPEED CONTROL SWITCH 1/2 STUCK (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Continuously with the ignition on.
- **Set Condition:**  
The Steering Column Control Module (SCCM) has detected that the Speed Control Switches are not operating properly.

Possible Causes
INTERMITTENT SPEED CONTROL SWITCH 1/2 STUCK DTC SPEED CONTROL SWITCH STEERING COLUMN CONTROL MODULE (SCCM)

**Diagnostic Test****1. DTC IS ACTIVE**

**Note:** If **P0562–BATTERY VOLTAGE LOW** or **P0563–BATTERY VOLTAGE HIGH** is set along with this DTC, diagnose the battery voltage DTC first.

Ignition on, engine not running.

With the Scan Tool, select View DTCs in the Steering Column Control Module.

**Is the DTC status Active at this time?**

**Yes** >> Go to 2

**No** >> Go to 4

**2. SPEED CONTROL SWITCH**

Turn the ignition off.

Replace the Speed Control Switch in accordance with the Service Information.

Turn the ignition on.

Move the Speed Control Switch to each position several times.

With the Scan Tool, Clear Stored DTCs in the Steering Column Control Module.

With the Scan Tool, select View DTCs in the Steering Column Control Module.

Move the Speed Control Switch to each position several times while monitoring the Scan Tool.

**Does this DTC reset?**

**Yes** >> Go To 3

**No** >> Test Complete.

**P1593-SPEED CONTROL SWITCH 1/2 STUCK (CONTINUED)****3. STEERING COLUMN CONTROL MODULE (SCCM)**

View repair.

**Repair**

Replace the Steering Column Control Module (SCCM) in accordance with the Service Information.

---

**4. INTERMITTENT SPEED CONTROL SWITCH 1/2 STUCK DTC**

The conditions necessary to set this DTC are not present at this time.

While monitoring the scan tool data relative to this circuit, move the Speed Control Switch to each position several times.

Look for the DTC to reset while the switch is being moved to each position.

**Were any problems found?**

**Yes** >> Repair as necessary.

**No** >> Test complete.

---

## P1603-PCM INTERNAL DUAL-PORT RAM COMMUNICATION FAILURE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**  
Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PCM FUSED IGNITION SWITCH CIRCUIT
PCM INTERNAL

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F202) and (F924) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F202) and (F924) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1603-PCM INTERNAL DUAL-PORT RAM COMMUNICATION FAILURE (CONTINUED)****2. PCM**

The Powertrain Control Module is reporting internal errors.

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P1604-PCM INTERNAL DUAL-PORT RAM READ/WRITE INTEGRITY FAILURE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**  
Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PCM FUSED IGNITION SWITCH CIRCUIT
PCM INTERNAL

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F202) and (F924) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F202) and (F924) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1604-PCM INTERNAL DUAL-PORT RAM READ/WRITE INTEGRITY FAILURE (CONTINUED)****2. PCM**

The Powertrain Control Module is reporting internal errors.

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P1607-PCM INTERNAL SHUTDOWN TIMER RATIONALITY

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**  
Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PCM FUSED IGNITION SWITCH CIRCUIT
PCM INTERNAL

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### Diagnostic Test

#### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F202) and (F924) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F202) and (F924) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1607-PCM INTERNAL SHUTDOWN TIMER RATIONALITY (CONTINUED)****2. PCM**

The Powertrain Control Module is reporting internal errors.

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

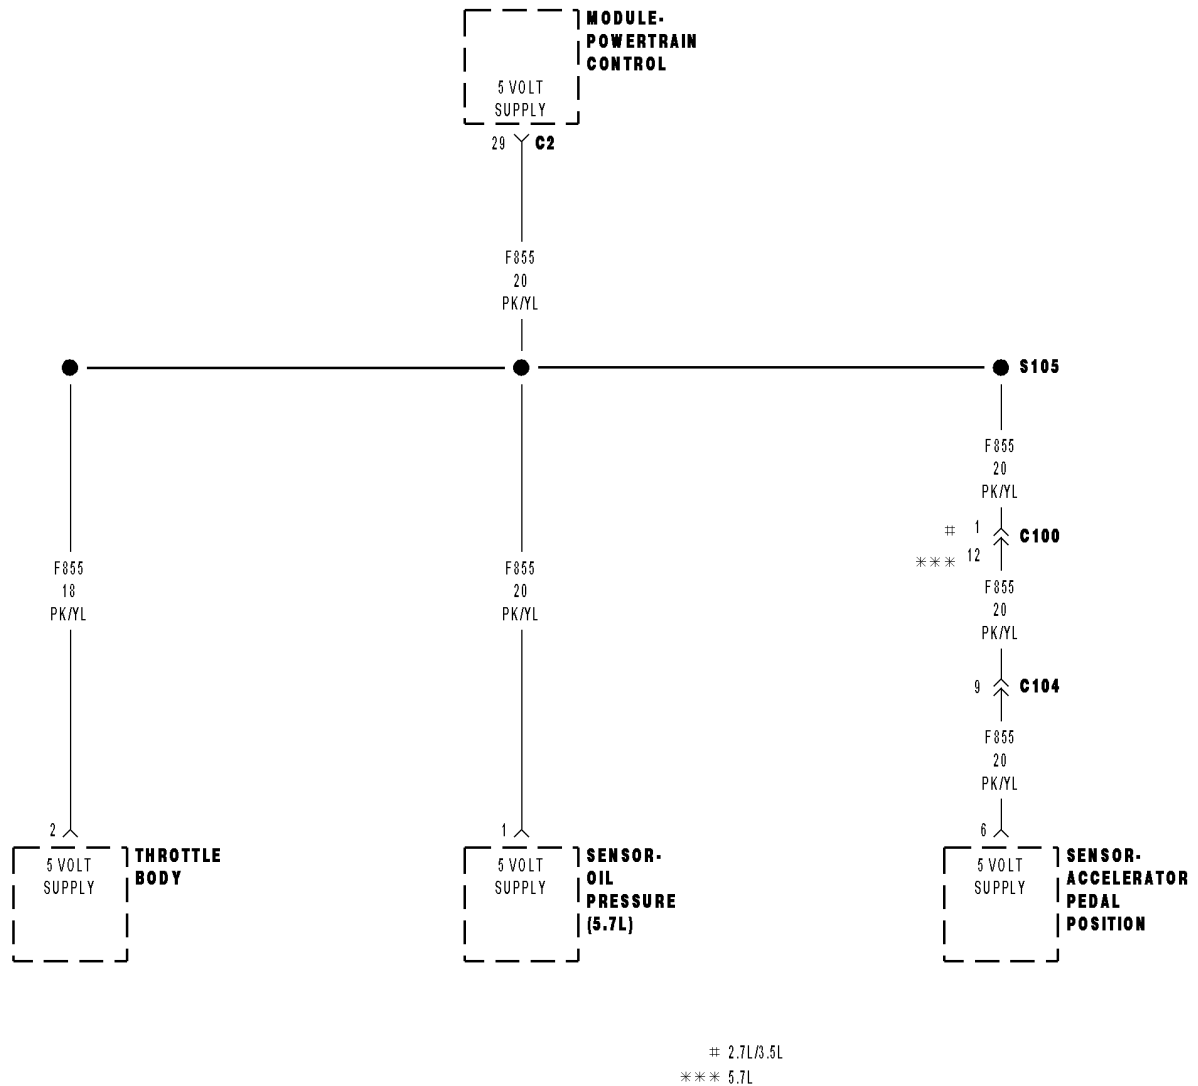

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P1618-SENSOR REFERENCE VOLTAGE 1 CIRCUIT ERRATIC

**P1618-SENSOR REFERENCE VOLTAGE 1 CIRCUIT ERRATIC (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

When the PCM recognizes the Primary 5-volt Supply circuit voltage is varying too much too quickly. One Trip Fault. ETC light is flashing.

Possible Causes
(F855) PRIMARY 5-VOLT SUPPLY SHORTED TO GROUND
(F855) PRIMARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE
(F855) PRIMARY 5-VOLT SUPPLY CIRCUIT OPEN
5-VOLT SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1618-SENSOR REFERENCE VOLTAGE 1 CIRCUIT ERRATIC (CONTINUED)****2. (F855) PRIMARY 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F855) Primary 5-volt Supply circuit.

**Note:** This code can be caused by the improper installation of after market accessories that may be causing excessive noise on the (F855) 5-volt Supply circuit.

Measure the resistance between ground and the (F855) Primary 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) Primary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. SENSOR SHORTED TO GROUND**

Connect the PCM harness connectors and all the previously disconnected Sensor except for the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) Primary 5-volt Supply circuit at the Throttle Body harness connector.

**CAUTION:** You must Turn the Ignition Off when disconnecting any of the Sensor harness connectors and Turn the Ignition On to check the voltage readings.

While monitoring the voltage, disconnect each Sensor harness connector that shares the (F855) Primary 5-volt Supply circuit, one at a time.

**Does the voltage increase above 4.5 volts when disconnecting any of the Sensor harness connectors?**

**Yes** >> Replace the Sensor that causes the (F855) Primary 5-volt Supply circuit voltage to increase when disconnected.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P1618-SENSOR REFERENCE VOLTAGE 1 CIRCUIT ERRATIC (CONTINUED)****4. 5-VOLT SENSOR**

Turn the ignition off.

Connect all the previously disconnected Sensors except for the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) Primary 5-volt Supply circuit at the CKP Sensor harness connector.

**Is the voltage between 4.8 and 5.2 volts?**

**Yes** >> Replace the Crank Position Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (F855) PRIMARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F855) Primary 5-volt Supply circuit.

Ignition on, engine not running.

Measure the voltage on the (F855) Primary 5-volt Supply circuit in the CKP Sensor harness connector.

**Is the voltage present?**

**Yes** >> Repair the short to battery voltage in the (F855) Primary 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P1618-SENSOR REFERENCE VOLTAGE 1 CIRCUIT ERRATIC (CONTINUED)****6. (F855) PRIMARY 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Reconnect all the sensors that were disconnected in the previous step except for the CKP Sensor harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance in the (F855) Primary 5-volt Supply circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

It may be necessary to perform this test from every sensor that uses the (F855) Primary 5-volt Supply circuit.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F855) Primary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

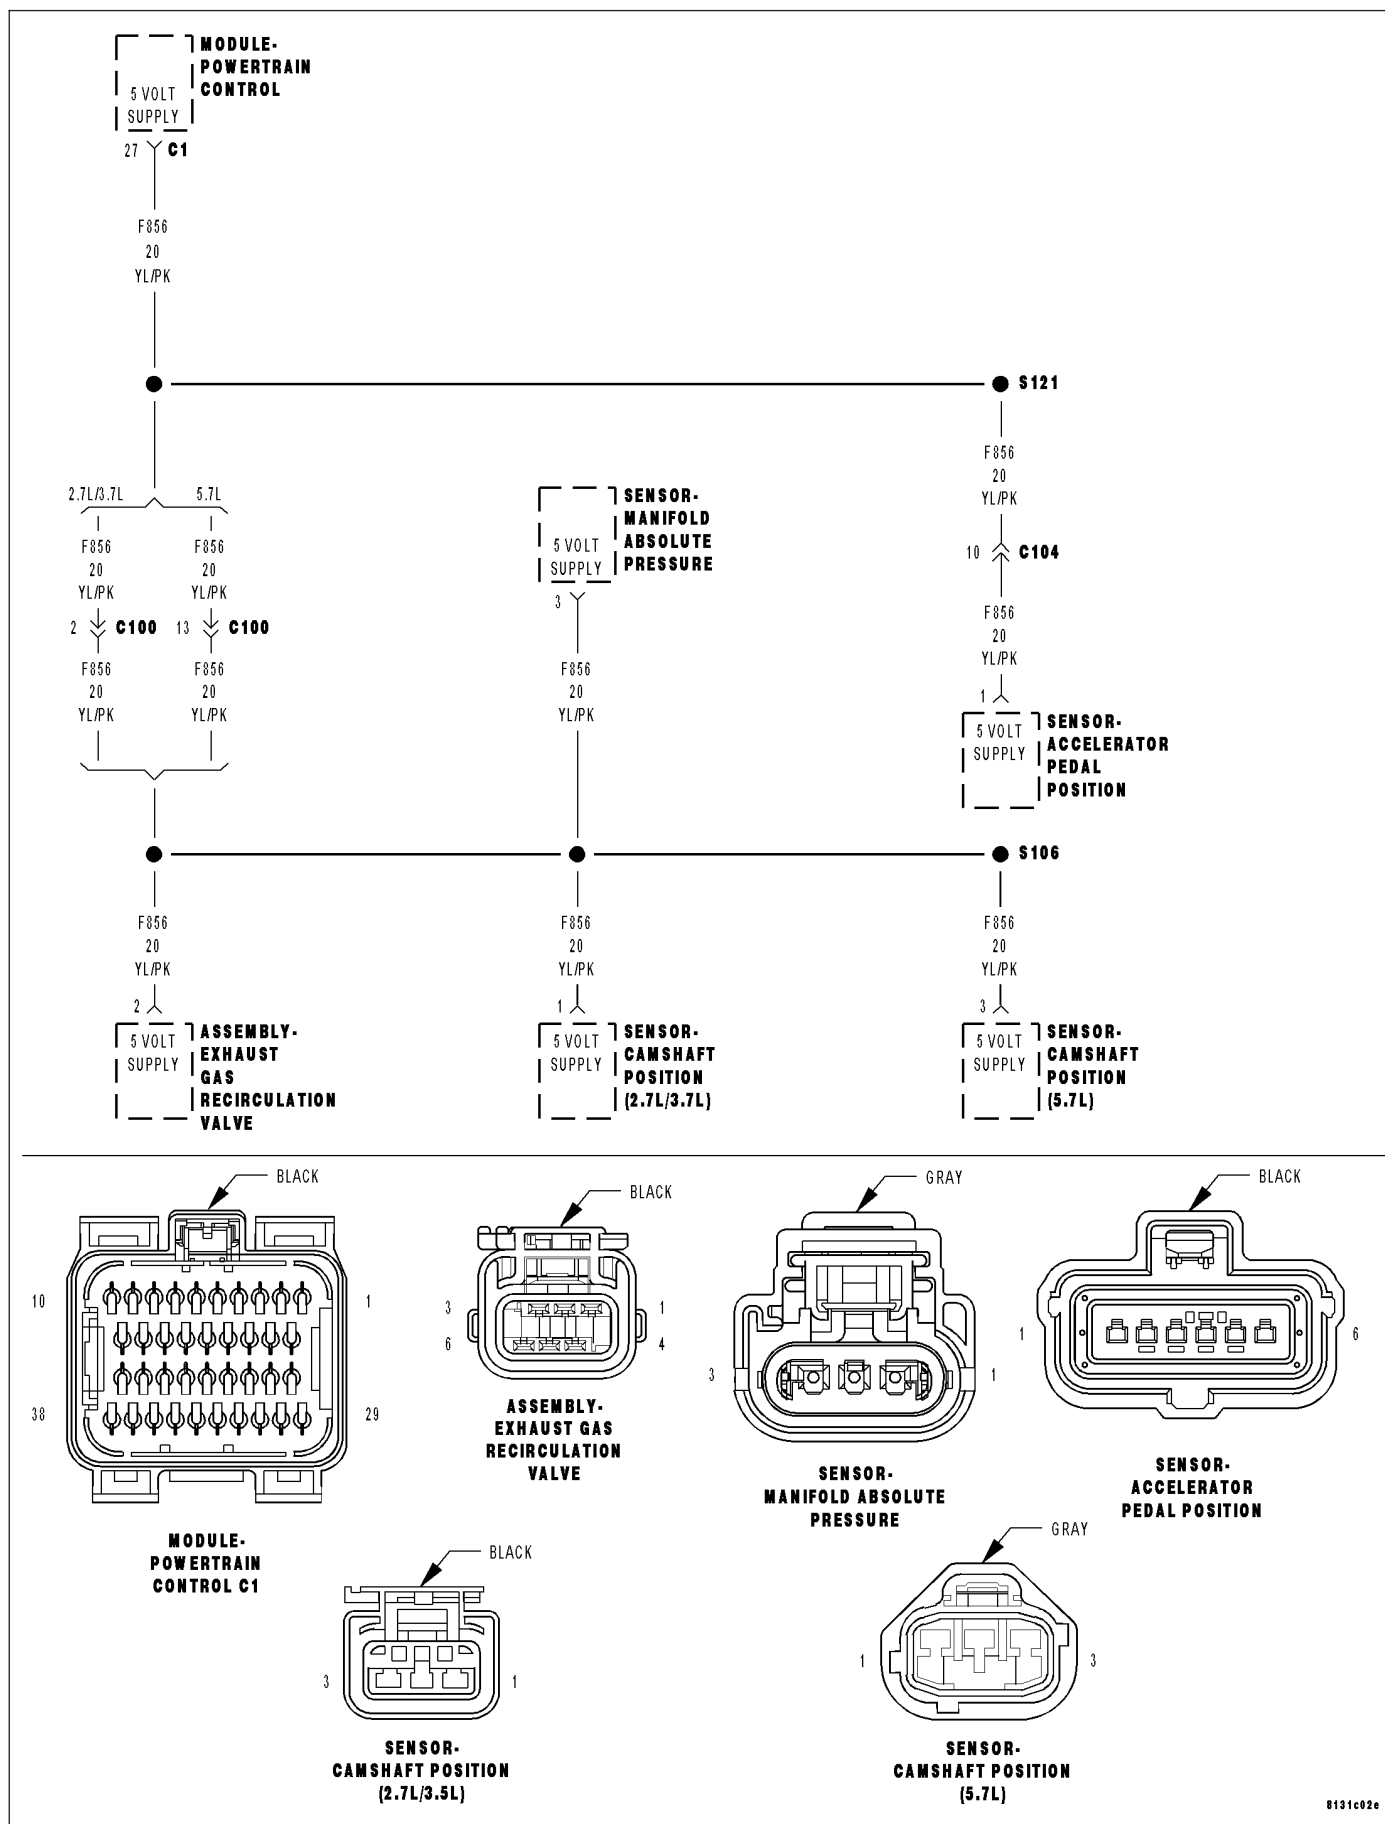

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P1628-SENSOR REFERENCE VOLTAGE 2 CIRCUIT ERRATIC

P1628-SENSOR REFERENCE VOLTAGE 2 CIRCUIT ERRATIC (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM recognizes the Auxiliary 5-volt Supply circuit voltage is varying too much to quickly. One Trip Fault. ETC light is flashing.

Possible Causes
(F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO GROUND (F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE (F856) AUXILIARY 5-VOLT SUPPLY CIRCUIT OPEN 5-VOLT SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read DTCs.

- Is the DTC active at this time?
- Yes**    >> Go To 2
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P1628-SENSOR REFERENCE VOLTAGE 2 CIRCUIT ERRATIC (CONTINUED)****2. (F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO GROUND**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F856) Auxiliary 5-volt Supply circuit.

**Note:** This code can be caused by the improper installation of after market accessories that may be causing excessive noise on the (F856) 5-volt Supply circuit.

Measure the resistance between ground and the (F856) Auxiliary 5-volt Supply circuit at the CMP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) Auxiliary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. SENSOR SHORTED TO GROUND**

Connect the PCM harness connectors and all the previously disconnected Sensor except for the CMP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit in the CMP Sensor harness connector.

**CAUTION:** You must Turn the Ignition OFF when disconnecting any of the Sensor harness connectors and Turn the Ignition On to check the voltage readings.

While monitoring the voltage, disconnect each Sensor harness connector that shares the (F856) Auxiliary 5-volt Supply circuit, one at a time.

**Does the voltage increase above 4.5 volts when disconnecting any of the Sensor harness connectors?**

**Yes** >> Replace the Sensor that causes the (F856) Auxiliary 5-volt Supply circuit voltage to increase when disconnected.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P1628-SENSOR REFERENCE VOLTAGE 2 CIRCUIT ERRATIC (CONTINUED)****4. 5-VOLT SENSOR**

Turn the ignition off.

Connect all the previously disconnected Sensors except for the CMP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the voltage below 4.5 volts?**

**Yes** >> Go To 5

**No** >> Replace the Cam Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (F856) AUXILIARY 5-VOLT SUPPLY SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Disconnect all the Sensors that share the (F856) Auxiliary 5-volt Supply circuit.

Ignition on, engine not running.

Measure the voltage on the (F856) Auxiliary 5-volt Supply circuit at the CMP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (F856) Auxiliary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P1628-SENSOR REFERENCE VOLTAGE 2 CIRCUIT ERRATIC (CONTINUED)****6. (F856) AUXILIARY 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Reconnect all the sensors that were disconnected in the previous step except the CMP Sensor harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance in the (F856) Auxiliary 5-volt Supply circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

It may be necessary to perform this test from every sensor that uses the (F856) Auxiliary 5-volt Supply circuit.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F856) Auxiliary 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P1696-EEPROM MEMORY WRITE DENIED/INVALID

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Continuously with the ignition on.
- **Set Condition:**  
An attempt to program/write to the internal EEPROM failed, Also checks at powerdown. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. SCAN TOOL DISPLAYS A WRITE FAILURE

With a scan tool, perform the SRI Memory Test.

##### Does scan tool display Write Failure?

- Yes**    >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**    >> Go To 2

#### 2. SCAN TOOL DISPLAYS A WRITE REFUSED

With the a scan tool, perform the SRI Memory Test.

##### Does the scan tool display Write Refused?

- Yes**    >> Go To 3
- No**    >> Go To 4

**P1696-EEPROM MEMORY WRITE DENIED/INVALID (CONTINUED)****3. PCM REFUSED 2ND TEST**

With a scan tool, perform the SRI Memory Test a third time.

**Note:** Retest the SRI Memory two more times.

**Does the scan tool display Write Refused again?**

- Yes** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.
- 

**4. SCAN TOOL DISPLAYS SRI MILEAGE INVALID**

With a scan tool, perform the SRI Memory Test.

**Does the scan tool display SRI Mileage Invalid?**

- Yes** >> Update the mileage and retest the SRI Memory.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 5
- 

**5. COMPARE SRI MILEAGE WITH ODOMETER**

Compare the SRI Mileage stored with the Instrument Panel Odometer.

**Is the mileage within the specified range displayed on the scan tool?**

- Yes** >> Test Complete.
- No** >> Update the mileage and retest the SRI Memory.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P1697-EMR (SRI) MILEAGE NOT STORED

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Continuously with the ignition on.
- **Set Condition:**  
An attempt to program/write to the internal EEPROM failed, Also checks at powerdown. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. SCAN TOOL DISPLAYS A WRITE FAILURE

With a scan tool, perform the SRI Memory Test.

##### Does scan tool display Write Failure?

- Yes**    >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**    >> Go To 2

#### 2. SCAN TOOL DISPLAYS A WRITE REFUSED

With the a scan tool, perform the SRI Memory Test.

##### Does the scan tool display Write Refused?

- Yes**    >> Go To 3
- No**    >> Go To 4

**P1697-EMR (SRI) MILEAGE NOT STORED (CONTINUED)****3. PCM REFUSED 2ND TEST**

With a scan tool, perform the SRI Memory Test a third time.

**Note:** Retest the SRI Memory two more times.

**Does the scan tool display Write Refused again?**

- Yes** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.
- 

**4. SCAN TOOL DISPLAYS SRI MILEAGE INVALID**

With a scan tool, perform the SRI Memory Test.

**Does the scan tool display SRI Mileage Invalid?**

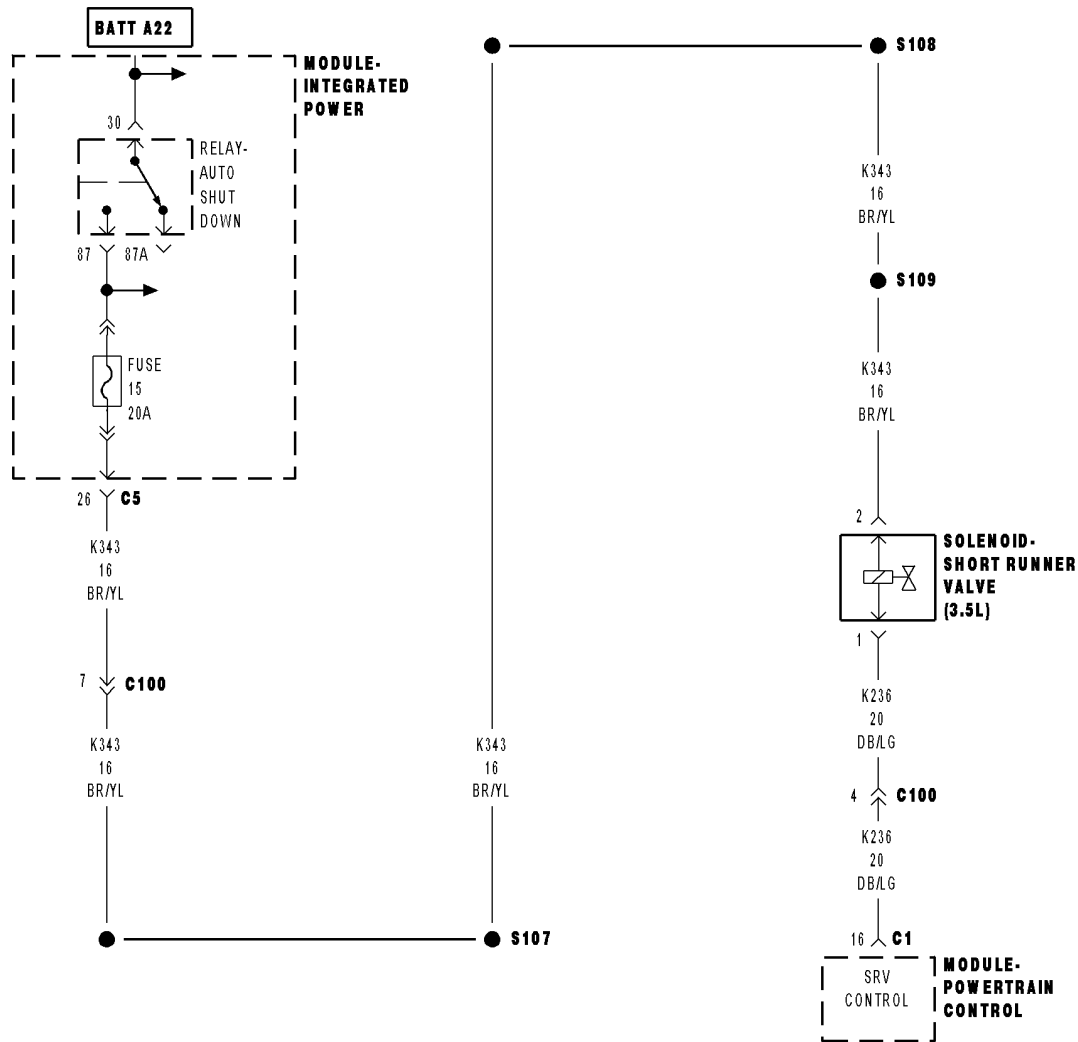

- Yes** >> Update the mileage and retest the SRI Memory.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 5
- 

**5. COMPARE SRI MILEAGE WITH ODOMETER**

Compare the SRI Mileage stored with the Instrument Panel Odometer.

**Is the mileage within the specified range displayed on the scan tool?**

- Yes** >> Test Complete.
- No** >> Update the mileage and retest the SRI Memory.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

**P2008—SHORT RUNNER VALVE SOLENOID CIRCUIT**

**P2008–SHORT RUNNER VALVE SOLENOID CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on. ASD Relay energized. Battery voltage greater than 10 volts.

- **Set Condition:**

The PCM senses the SRV is not at the desired state. One Trip Fault.

Possible Causes
(K343) FUSED AUTO SHUT DOWN RELAY OUTPUT OPEN
(K236) SRV CONTROL CIRCUIT SHORT TO BATTERY VOLTAGE
(K236) SRV CONTROL CIRCUIT SHORT TO GROUND
(K236) SRV CONTROL CIRCUIT OPEN
SHORT RUNNER VALVE SOLENOID
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTC.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2008–SHORT RUNNER VALVE SOLENOID CIRCUIT (CONTINUED)****2. SHORT RUNNER VALVE SOLENOID OPERATION**

Turn the ignition off.

Disconnect the SRV Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, connect one end to the (K236) SRV Control circuit and the other end the (Z904) Ground circuit in the SRV Solenoid harness connector.

With the scan tool, actuate (Toggle) the SRV Solenoid.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Short Runner Valve Solenoid.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K343) FUSED AUTO SHUT DOWN RELAY OUTPUT2 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Short Runner Valve Solenoid harness connector.

Turn the ignition on.

Using the scan tool, actuate (Toggle) the ASD Relay.

Using a 12-volt test light connected ground, probe the Fused ASD Relay Output circuit in the SRV Solenoid harness connector.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Go To 4

**No** >> Repair the (K343) Fused ASD Relay Output circuit.

Perform POWERTRAIN VERIFICATION TEST VER — 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**4. (K236) SRV CONTROL CIRCUIT SHORT TO BATTERY VOLTAGE**

Turn the ignition off

Disconnect the PCM harness connectors.

Turn the ignition on.

Measure the voltage of the (K236) SRV Control circuit in the SRV Solenoid harness connector.

**Does the voltage indicate voltage present?**

**Yes** >> Repair the short to voltage in the SRV Control circuit.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

## P2008-SHORT RUNNER VALVE SOLENOID CIRCUIT (CONTINUED)

### 5. (K236) SRV CONTROL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Measure the resistance between the (K236) SRV Control circuit in the SRV Solenoid harness connector and ground.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K236) SRV Control circuit.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

### 6. (K236) SRV CONTROL CIRCUIT OPEN

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K236) SRV Control circuit between from the SRV Solenoid harness connector to the appropriate terminal of the special tool.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K236) SRV Control circuit.

Perform POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

Go To 7

**P2008-SHORT RUNNER VALVE SOLENOID CIRCUIT (CONTINUED)****7. PCM**

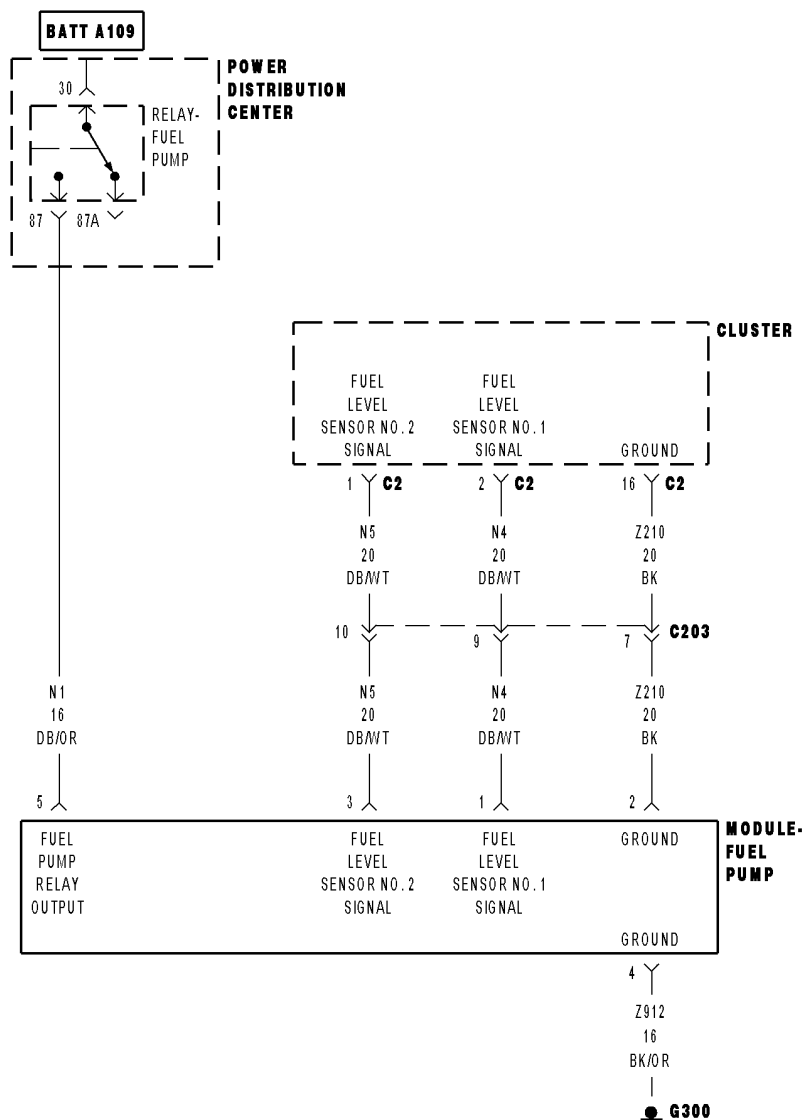

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**      >> Replace and program the Powertrain Control Module per Service Information.  
          Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P2066-FUEL LEVEL SENSOR 2 PERFORMANCE

**P2066-FUEL LEVEL SENSOR 2 PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

TEST No.1: With the ignition on, the fuel level is compared to the previous key down after a 20 second delay.

TEST No.2: The PCM monitors the fuel level at ignition on.

- **Set Condition:**

TEST No.1: If the PCM does not see a difference in fuel level of greater than 0.1 volt the test will fail. TEST

No.2: If the PCM does not see a change in the fuel level of .1765 over a set amount of miles the test will fail.

Three good trips to turn off the MIL.

Possible Causes
(N5) FUEL LEVEL SIGNAL CIRCUIT OPEN
(N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND
(Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN
FUEL TANK
FUEL LEVEL SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Diagnose any CAN - C or CAN - B Communication DTCs before continuing.

**Note:** Diagnose P2067 or P2068 first, if set along with P2066.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. VISUALLY INSPECT FUEL TANK

Visually inspect the Fuel Tank for damage that may restrict the Fuel Sending Unit float from moving.

**Is the Fuel Tank OK?**

**Yes** >> Go To 3

**No** >> Replace the Fuel Tank as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2066-FUEL LEVEL SENSOR 2 PERFORMANCE (CONTINUED)

### 3. (N5) FUEL LEVEL SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Disconnect the C2 Cluster harness connectors.

Measure the resistance of the (N5) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (N5) Fuel Level Signal circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

### 4. (N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (N5) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (N5) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2066-FUEL LEVEL SENSOR 2 PERFORMANCE (CONTINUED)****5. (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (Z210) Fuel Level Sensor Ground circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (Z210) Fuel Level Sensor Ground circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. INTERNAL INSPECTION OF THE FUEL TANK**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Tank per Service Information.

Remove the Fuel Pump Module.

Visually inspect the inside of the Fuel Tank for any obstructions or deformities.

Inspect the Fuel Pump Module Float arm for damage.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. FUEL LEVEL SENSOR**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Level Sensor.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

# P2067-FUEL LEVEL SENSOR 2 CIRCUIT LOW

**P2067-FUEL LEVEL SENSOR 2 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage above 10.4 volts.
- **Set Condition:**  
The fuel level sensor signal voltage goes below 0.4 of a volt for more than 90 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND (N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO (Z210) FUEL LEVEL SENSOR RETURN CIRCUIT FUEL LEVEL SENSOR INSTRUMENT CLUSTER

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).**

**Diagnostic Test****1. FUEL LEVEL SENSOR VOLTAGE BELOW 0.4 OF A VOLT**

**Note:** Diagnose any CAN - B or CAN -C Communication DTCs before continuing.

Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage below 0.4 of a volt?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**2. FUEL LEVEL SENSOR**

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Did the Fuel Level Sensor voltage change from below 0.4 of a volt to above 4.0 volts?**

- Yes** >> Replace the Fuel Level Sensor.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Go To 3

**P2067-FUEL LEVEL SENSOR 2 CIRCUIT LOW (CONTINUED)****3. (N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 Cluster harness connectors.

Measure the resistance between ground and the (N5) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (N5) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT**

Measure the resistance between the (N5) Fuel Level Signal circuit and the (Z210) Fuel Level Sensor Ground circuit in the Fuel Pump Module harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (Z210) Fuel Level Sensor Ground circuit and the (N5) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2067-FUEL LEVEL SENSOR 2 CIRCUIT LOW (CONTINUED)****5. INSTRUMENT CLUSTER**

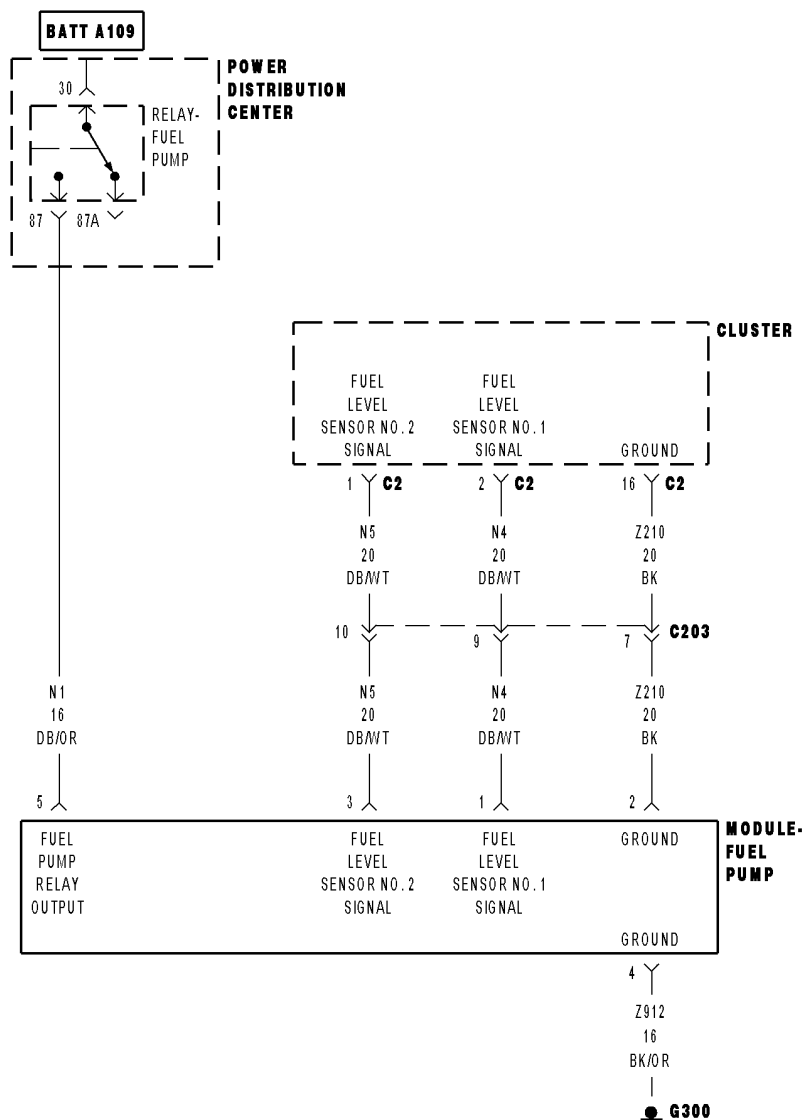

**Note:** Before continuing, check the Instrument Cluster harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes**    >> Repair as necessary.  
          Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**     >> Replace and program the Instrument Cluster per Service Information.  
          Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P2068-FUEL LEVEL SENSOR 2 CIRCUIT HIGH

**P2068-FUEL LEVEL SENSOR 2 CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and battery voltage above 10.4 volts.

- **Set Condition:**

The fuel level sensor signal voltage at the PCM goes above 4.9 volts for more than 90 seconds. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(N5) FUEL LEVEL SIGNAL CIRCUIT OPEN
(Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN
FUEL LEVEL SENSOR
INSTRUMENT CLUSTER

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. FUEL LEVEL SENSOR VOLTS ABOVE 4.9 VOLTS

**Note:** Diagnose any CAN - B and CAN - C Communication DTCs before continuing.

Ignition on, engine not running.

With a scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage above 4.9 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2068-FUEL LEVEL SENSOR 2 CIRCUIT HIGH (CONTINUED)****2. FUEL LEVEL SENSOR**

Turn the ignition off.

Disconnect the Fuel Pump Module electrical harness connector.

Ignition on, engine not running.

Connect a jumper wire between the (N5) Fuel Level Signal circuit and the (Z210) Fuel Level Sensor Ground circuit in the Fuel Pump Module harness connector.

With the scan tool, read the Fuel Level Sensor voltage.

**Did the Fuel Level Sensor voltage change from above 4.8 volts to below 0.4 of a volt with the jumper wire installed?**

**Yes** >> Replace the Fuel Level Sensor.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**Note:** Remove the jumper wire before continuing.

**3. (N5) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the C2 Cluster harness connector.

Ignition on, engine not running.

Measure the voltage on the (N5) Fuel Level Signal circuit in the Fuel Pump Module harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (N5) Fuel Level Signal circuit.

Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P2068-FUEL LEVEL SENSOR 2 CIRCUIT HIGH (CONTINUED)****4. (N5) FUEL LEVEL SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (N5) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (N5) Fuel Level Signal circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (Z210) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (Z210) Fuel Level Sensor Ground circuit from the Fuel Pump Module harness connector to the C2 Cluster harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (Z210) Fuel Level Sensor Ground circuit.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2068-FUEL LEVEL SENSOR 2 CIRCUIT HIGH (CONTINUED)****6. INSTRUMENT CLUSTER**

**Note:** Before continuing, check the Instrument Cluster harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Instrument Cluster per Service Information.  
Perform BODY VERIFICATION TEST-VER 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)
-

## P2072-ELECTRONIC THROTTLE CONTROL SYSTEM - ICE BLOCKAGE

For the Engine circuit diagram (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

The PCM recognizes the Throttle plate is stuck during extremely cold Ambient Temperature operation. The throttle plate goes through a de-icing procedure. If the throttle blade still doesn't move this fault sets. The MIL will not illuminate. The vehicle will be in Limp home condition, limiting rpm and vehicle speed.

Possible Causes
THROTTLE PLATE FROZEN

### Diagnostic Test

#### 1. THROTTLE BODY INSPECTION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data.

**Note:** This DTC sets in extreme cold Ambient Temperatures with the throttle plate stuck. By the time the vehicle gets to the dealership the condition may be corrected.

**Note:** Diagnose any other DTCs that may also be set before continuing.

Turn the ignition off.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material (ice or dirt) on the Throttle Plate or in the bore causing the Throttle Plate to stick.

**Is the throttle blade still stuck because it is frozen?**

**Yes** >> Allow the Throttle Body to thaw naturally in a room temperature climate.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK ENGINE MECHANICAL PROBLEM 1/2 O2 SENSOR (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT (K299) O2 1/2 HEATER CONTROL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT FUEL CONTAMINATION

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check the vehicle repair history. If the 1/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)****2. EXHAUST LEAK**

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect for holes, cracks and blockage in the exhaust system.

**Is the exhaust system in good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)****4. O2 SENSOR**

Ignition on, engine not running.

Disconnect the 1/2 O2 Sensor harness connector.

With the scan tool, monitor the 1/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Using a jumper wire, jump the (K141) O2 Sensor 1/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Note:** The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)****5. (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT**

Remove the jump wire.

Ignition on, engine not running.

With the scan tool, monitor the 1/2 O2 Sensor voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 6

**No** >> Check the (K141) O2 Sensor 1/2 Signal circuit for an open or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)****6. (K299) O2 SENSOR 1/2 HEATER CONTROL CIRCUIT**

Turn the ignition off.

Measure the resistance between ground and the (K299) O2 Sensor 1/2 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K299) O2 Sensor 1/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN (CONTINUED)

7. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

Is the voltage at 2.5 volts?

- Yes

>> Check the fuel system for contaminants.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No

>> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 RICH**

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 RICH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK ENGINE MECHANICAL PROBLEM 1/2 O2 SENSOR (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT (K299) O2 HEATER 1/2 CONTROL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT FUEL CONTAMINATION

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check the vehicle repair history. If the 1/2 O2 has been replaced make sure that the O2 sensor was properly installed and meets OEM specification.

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 RICH (CONTINUED)****2. EXHAUST LEAK**

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect for holes, cracks and blockage in the exhaust system.

**Is the exhaust system in good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 RICH (CONTINUED)****4. O2 SENSOR**

Ignition on, engine not running.

Disconnect the 1/2 O2 Sensor harness connector.

With the scan tool, monitor the 1/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Using a jumper wire, jump the (K141) O2 Sensor 1/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor

## P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft and fuel level greater than 15%.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK ENGINE MECHANICAL PROBLEM 2/2 O2 SENSOR (K243) O2 2/2 SIGNAL CIRCUIT (K399) O2 HEATER 2/2 CONTROL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT FUEL CONTAMINATION

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check the vehicle repair history. If the 2/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)****2. EXHAUST LEAK**

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect for holes, cracks and blockage in the exhaust system.

**Is the exhaust system in good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)****4. O2 SENSOR**

Ignition on, engine not running.

Disconnect the 2/2 O2 Sensor harness connector.

With the scan tool, monitor the 2/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Using a jumper wire, jump the (K243) O2 Sensor 2/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Note:** The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)****5. (K243) O2 SENSOR 2/2 SIGNAL CIRCUIT**

Remove the jump wire.

Ignition on, engine not running.

With the scan tool, monitor the O2 Sensor voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 6

**No** >> Check the (K243) O2 Sensor 2/2 Signal circuit for a open or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)****6. (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT**

Turn the ignition off.

Measure the resistance between ground and the (K399) O2 Sensor 2/2 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K399) O2 Sensor 2/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN (CONTINUED)****7. (K904) O2 DOWNSTREAM RETURN CIRCUIT**

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

- Yes** >> Check the fuel system for contaminants.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH**

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.

- **Set Condition:**

If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXHAUST LEAK ENGINE MECHANICAL PROBLEM 2/2 O2 SENSOR (K342) O2 SENSOR 2/2 SIGNAL CIRCUIT (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT (K904) O2 DOWNSTREAM RETURN CIRCUIT FUEL CONTAMINATION

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Check the vehicle repair history. If the 2/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.

**Note:** Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant. Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)****2. EXHAUST LEAK**

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect for holes, cracks and blockage in the exhaust system.

**Is the exhaust system in good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. ENGINE MECHANICAL PROBLEM**

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)****4. O2 SENSOR**

Ignition on, engine not running.

Disconnect the 2/2 O2 Sensor harness connector.

With the scan tool, monitor the 2/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Using a jumper wire, jump the (K243) O2 Signal 2/2 circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Note: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)****5. (K243) O2 SENSOR 2/2 SIGNAL CIRCUIT**

Remove the jump wire.

Ignition on, engine not running.

With the scan tool, monitor the 2/2 O2 Sensor voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K243) O2 Sensor 2/2 Signal circuit for an open or short to battery voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

**No** >> Go To 6

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)****6. (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance between ground and the (K399) O2 Sensor 2/2 Heater Control circuit in the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K399) O2 Sensor 2/2 Heater Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH (CONTINUED)****7. (K904) O2 DOWNSTREAM RETURN CIRCUIT**

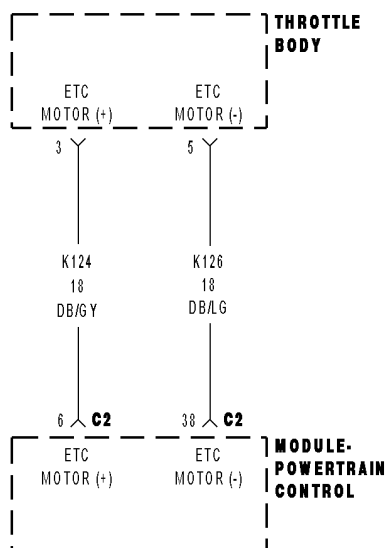

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

- Yes** >> Check the fuel system for contaminants.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT

**P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and the ETC Motor is not in Limp Home mode.

- **Set Condition:**

When the PCM detects an internal error or a short between the ETC Motor- and ETC Motor + circuits in the ETC Motor Driver. One trip fault. ETC light is flashing.

Possible Causes
THROTTLE PLATE / BORE INSPECTION (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K124) ETC POSITIVE CIRCUIT SHORTED TO (K126) ETC NEGATIVE CIRCUIT (K124) ETC POSITIVE CIRCUIT OPEN (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND (K126) ETC NEGATIVE CIRCUIT OPEN (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND LOW BATTERY VOLTAGE ETC MOTOR/THROTTLE BODY PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

**Note:** If the P2100 is intermittent, it is possible that the controller is overheating in extreme hot temperatures, and this is considered a normal protection operation. No repair is necessary.

**Note:** Low battery voltage can also cause excessive current draw, in very hot and very cold ambient temperatures. Make sure the battery can pass a Load test before continuing.

With a scan tool, read DTCs.

Look closely at the temperatures at which this DTC set.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****2. THROTTLE PLATE INSPECTION**

Turn the ignition off.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material (ice or dirt) on the Throttle Plate or in the bore causing the Throttle Plate to stick.

**Were any signs of foreign material or scoring of the throttle plate or bore found?**

**Yes** >> Remove the debris if possible or replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

With a 12-volt test light connected to ground, probe the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage on the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Using a 12-volt test light connected to ground, probe the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****5. (K124) ETC POSITIVE CIRCUIT SHORTED TO THE (K126) ETC NEGATIVE CIRCUIT**

Measure the resistance between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K124) ETC POSITIVE CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (K124) ETC Positive circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)

### 7. (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

### 8. (K126) ETC NEGATIVE CIRCUIT OPEN

Measure the resistance of the (K126) ETC Negative circuit between the Throttle Body harness connector and the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K126) ETC Negative circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2100-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****9. (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**10. ETC MOTOR**

Reconnect the the Throttle Body harness connector.

**Note: Take the following measurement using special tool #8815 to avoid possible damage to the Throttle Body harness connector.**

Measure the resistance of the ETC Motor between the (K447) ETC Positive circuit and the (K448) ETC Negative circuit at the appropriate terminals of special tool #8815.

**Is the resistance between 2.5 and 25 ohms at closed throttle?**

**Yes** >> Go To 11

**No** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**11. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2101-ELECTRONIC THROTTLE CONTROL MOTOR PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the vehicle running, ETC Motor not in Limp Home mode, and the TPS adaptation is complete.
- **Set Condition:**  
The PCM recognizes too large of an error between the actual position of the Throttle Plate and the Set Point position. One trip fault and the code will set within 5 seconds. Three good trips to turn off the MIL ETC light is flashing.

Possible Causes
THROTTLE BODY ASSEMBLY LOW BATTERY VOLTAGE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. ACTIVE DTC

**Note:** Before continuing visually inspect the throttle blade and bore for any obstructions. Icing of the throttle body may have caused this code to set.

**Note:** Low battery voltage can also cause excessive current draw, in very hot and very cold ambient temperatures. Make sure the battery can pass a Load test before continuing.

**Note:** Diagnose any 5-Volt Supply, Battery, and TP Sensor DTCs before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2101-ELECTRONIC THROTTLE CONTROL MOTOR PERFORMANCE (CONTINUED)****2. THROTTLE PLATE INSPECTION**

Turn the ignition off.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material (ice or dirt) on the Throttle Plate or in the bore causing the Throttle Plate to stick.

Manually open and close the throttle plate using your hands.

**Does the Throttle Plate move?**

**Yes** >> Go To 3

**No** >> Remove the debris if possible or replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. THROTTLE POSITION WITHIN 2° DEGREES OF DESIRED THROTTLE POSITION**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, monitor the Actual Throttle Position and Desired Throttle Position.

Compare the Actual Throttle Position and the Set Point Throttle Position.

**Is the Actual Throttle Position within 2° degrees of the Desired Throttle Position?**

**Yes** >> Go To 4

**No** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**4. ETC OPERATION**

Ignition on, engine not running.

With a scan tool, actuate the Electronic Throttle Control Motor.

**Note: It may be necessary to use a mirror to see the throttle blade.**

Observe the throttle blade.

**Note: Make sure the motion of the throttle blade is smooth and that it opens and closes.**

**Did the ETC motor operate properly?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P2107-ELECTRONIC THROTTLE CONTROL MODULE PROCESSOR

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
Internal PCM failure. Module will attempt to reset, so you will be able to hear the throttle relearning. If the condition is continuous, the vehicle may not be driveable. One trip fault. ETC light is flashing.

Possible Causes
POWERTRAIN CONTROL MODULE NEEDS TO BE REPROGRAMMED

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

### Diagnostic Test

#### 1. REPROGRAM THE POWERTRAIN CONTROL MODULE

Check for any related TSBs.

Verify the PCM is at the latest calibration (flash level).

**Note: An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.**

Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

Test drive the vehicle for 10 miles on a flat road surface.

#### Does this DTC reset?

- Yes** >> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Test Complete.

P2108-ELECTRONIC THROTTLE CONTROL MODULE PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
Internal PCM failure. Customer may experience an extended cranking condition with limited driving and a rough idle. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
POWERTRAIN CONTROL MODULE NEEDS TO BE REPROGRAMMED

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

Diagnostic Test

1. REPROGRAM THE POWERTRAIN CONTROL MODULE

Check for any related TSBs.

Verify the PCM is at the latest calibration (flash level).

**Note: Inspect the Intake Manifold components for vacuum leaks, repair as necessary**

**Note: An intermittent loss of power to the PCM without performing an ETC Relearn procedure may cause this DTC to set.**

**Note: Diagnose any other DTCs that may have set with the P2108.**  
Flash the Powertrain Control Module per Service Information if any updates are available.

Start the engine.

Allow the engine to reach normal operating temperature.

Operate the accelerator pedal. (do not exceed 3500 rpm)

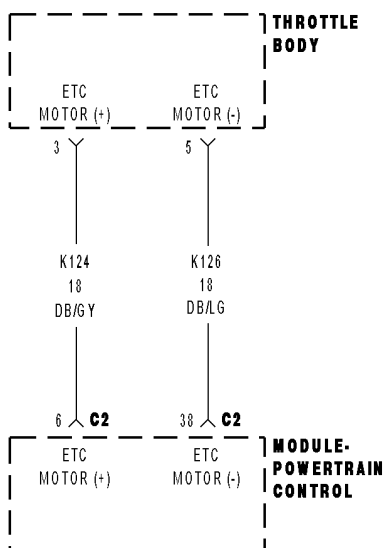

Test drive the vehicle for 10 miles on a flat road surface.

**Does this DTC reset by itself?**

- Yes**
- >> Replace and reprogram the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No**
- >> Test Complete.

## P2110-ELECTRONIC THROTTLE CONTROL - FORCED LIMITED RPM

**P2110-ELECTRONIC THROTTLE CONTROL - FORCED LIMITED RPM (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and ETC motor is working.

- **Set Condition:**

When the PCM requests to limit engine speed if PWM is too high for 20.5 seconds and before P2118 sets. One trip fault and the code will set within 5 seconds. ETC light is illuminated.

Possible Causes
THROTTLE PLATE STUCK (K124) ETC POSITIVE CIRCUIT OPEN (K126) ETC NEGATIVE CIRCUIT OPEN (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND ETC MOTOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool read DTCs.

In the Freeze Frame data, look at the temperature at which the fault occurred. If it occurred in extreme cold temperatures, Icing of the throttle body may have caused this code to set.

**Note: Diagnose any TP Sensor faults, 5-Volt Supply faults, and Battery Voltage High or Low DTCs before continuing.**

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2110-ELECTRONIC THROTTLE CONTROL - FORCED LIMITED RPM (CONTINUED)****2. THROTTLE PLATE STUCK**

Turn the ignition off.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material (ice or dirt) causing the Throttle to stick.

Manually open and close the throttle plate using your hands.

**Does the Throttle Plate move?**

**Yes** >> Go To 3

**No** >> Remove the debris if possible or replace the Throttle Body Assembly if signs of physical damage are present. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. (K124) ETC POSITIVE CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the C3/C PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K124) ETC Positive circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K124) ETC Positive circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2110-ELECTRONIC THROTTLE CONTROL - FORCED LIMITED RPM (CONTINUED)****4. (K126) ETC NEGATIVE CIRCUIT OPEN**

Measure the resistance of the (K126) ETC Negative circuit between the Throttle Body harness connector and the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K126) ETC Negative circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P2110-ELECTRONIC THROTTLE CONTROL - FORCED LIMITED RPM (CONTINUED)****6. (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. ETC MOTOR**

**Note: Take the following measurement using special tool #8815 to avoid possible damage to the Throttle Body harness connector.**

Measure the resistance of the ETC Motor between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit at the appropriate terminals of special tool #8815.

**Is the resistance between 2.5 and 25 ohms at closed throttle?**

**Yes** >> Go To 8

**No** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**8. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE

**P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and battery voltage greater than 10 volts.

- **Set Condition:**

Just after key on, the throttle is opened and closed to test the system. If the TP Sensor does not return to Limp Home Position at the end of this test, this DTC will set. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
THROTTLE PLATE STUCK ABOVE LIMP HOME POSITION TP SENSOR NO.1 AND TP SENSOR NO.2 BOTH READ 2.5 VOLTS (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K124) ETC POSITIVE CIRCUIT OPEN (K126) ETC NEGATIVE CIRCUIT OPEN (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Maximum engine speed could be reduced while this fault is active, it just depends where the throttle gets stuck.

Ignition on, engine not running.

**Note:** The PCM tests the ETC Motor by opening and closing the Throttle Plate before starting the engine. If during this test the Throttle plate does not return to the closed position this DTC sets.

With a scan tool read DTCs.

**Note:** Diagnose any TP Sensor or 5-Volt Supply DTCs before continuing.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE (CONTINUED)****2. THROTTLE PLATE STUCK OPEN**

Turn the ignition off.

**Note:** The PCM tests the ETC Motor by opening and closing the Throttle Plate before starting the engine. If during this test the Throttle plate does not return to the closed position this DTC sets.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material causing the Throttle to remain open.

Using a scan tool actuate the ETC Motor.

**Does the Throttle Plate move?**

**Yes** >> Go To 3

**No** >> Remove the debris if possible or replace the Throttle Body Assembly if signs of physical damage are present. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and perform the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. TP SENSOR NO.1 AND TP SENSOR NO.2 BOTH EQUAL 2.5 VOLTS**

With a scan tool, perform the Throttle Follower test while reading both TP Sensor voltage readings.

**Are both TP Sensor readings stuck at 2.5 volts?**

**Yes** >> Check the TP Sensor Signal circuits for excessive resistance, being shorted to each other, or shorted to the Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE (CONTINUED)****4. (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the C3/C PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform the diagnostics.**

Ignition on, engine not running.

With a 12-volt test light connected to ground, probe the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815..

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage on the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K124) ETC POSITIVE CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (K124) ETC Positive circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K124) ETC Positive circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE (CONTINUED)****6. (K126) ETC NEGATIVE CIRCUIT OPEN**

Measure the resistance of the (K126) ETC Negative circuit between the Throttle Body harness connector and the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K126) ETC Negative circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K124) ETC Positive circuit at the appropriate terminal of special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2111-ELECTRONIC THROTTLE CONTROL - UNABLE TO CLOSE (CONTINUED)****8. (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

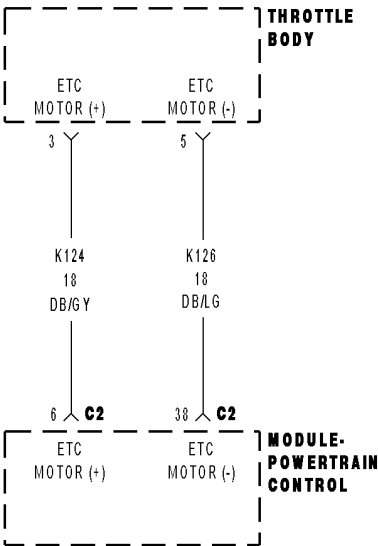

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN

**P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and battery voltage greater than 10 volts.

- **Set Condition:**

Just after key on, the throttle is opened and closed to test the system. If the TP Sensor does not return to Limp Home Position at the end of this test, this DTC will set. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
THROTTLE PLATE STUCK AT OR BELOW LIMP HOME POSITION (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K124) ETC POSITIVE CIRCUIT OPEN (K126) ETC NEGATIVE CIRCUIT OPEN (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

**Note: The PCM tests the ETC Motor by opening and closing the Throttle Plate before starting the engine. If during this test the Throttle plate does not return to the closed position this DTC sets.**

With a scan tool read DTCs.

**Note: Diagnose any TP Sensor, Battery Voltage, and 5-Volt Supply DTCs before continuing.**

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN (CONTINUED)****2. THROTTLE PLATE STUCK OPEN**

Turn the ignition off.

**Note:** The PCM tests the ETC Motor by opening and closing the Throttle Plate before starting the engine. If during this test the Throttle plate does not open this DTC sets.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material causing the Throttle to remain open.

Using a scan tool actuate the ETC Motor.

**Does the Throttle Plate move?**

**Yes** >> Go To 3

**No** >> Remove the debris if possible or replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the C3 PCM harness connector.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Ignition on, engine not running.

With a 12-volt test light connected to ground, probe the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage on the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN (CONTINUED)****4. (K124) ETC POSITIVE CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (K124) ETC Positive circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K124) ETC Positive circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K126) ETC NEGATIVE CIRCUIT OPEN**

Measure the resistance of the (K126) ETC Negative circuit between the Throttle Body harness connector and the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K126) ETC Negative circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN (CONTINUED)****6. (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between a known good ground and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2112-ELECTRONIC THROTTLE CONTROL - UNABLE TO OPEN (CONTINUED)****8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P2115-ACCELERATOR PEDAL POSITION SENSOR 1 MINIMUM STOP PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Igniting on. During in plant mode the APP Sensors need to be checked to make sure that idle and full pedal travel can be reached on both sensors. The test for P2115 is only enabled once test for P2166 has passed.

- **Set Condition:**

APPS No.1 has failed to achieve the required minimum value during In Plant testing. One trip fault and the code will set within 5 seconds. Engine will only idle.

Possible Causes
IN PLANT TEST FAILURE
APPS RELEARN

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. IN PLANT TEST FAILURE

Ignition on, engine not running.

**Note: This DTC is set when the APP Sensors are learned in plant but do not reach the Minimum or Maximum voltage range.**

With a scan tool read DTCs.

With the scan tool, erase DTCs.

Start the engine.

With the scan tool, read DTCs.

**Note: Diagnose any APPS out of Range and 5-Volt Supply DTCs before continuing.**

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

#### 2. APPS RELEARN

With a scan tool select the ETC RELEARN function.

Next, erase DTCs.

Start the engine.

**Does the DTC return?**

**Yes** >> Replace the APPS Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P2116-ACCELERATOR PEDAL POSITION SENSOR 2 MINIMUM STOP PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Igniting on. During in plant mode the APP Sensors need to be checked to make sure that idle and full pedal travel can be reached on both sensors. The test for P2116 is only enabled once test for P2167 has passed.

- **Set Condition:**

APPS No.2 has failed to achieve the required minimum value during In Plant testing. One trip fault and the code will be stored within 5 seconds. Engine will only idle.

Possible Causes
IN PLANT TEST FAILURE
APPS RELEARN

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. IN PLANT TEST FAILURE

Ignition on, engine not running.

**Note: This DTC is set when the APP Sensors are learned in plant but do not reach the Minimum or Maximum voltage range.**

With a scan tool read DTCs and record the related Freeze Frame data.

With a scan tool, erase DTCs.

Start the engine.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

#### 2. APPS RELEARN

With a scan tool select the ETC RELEARN function.

Next, erase DTCs.

Start the engine.

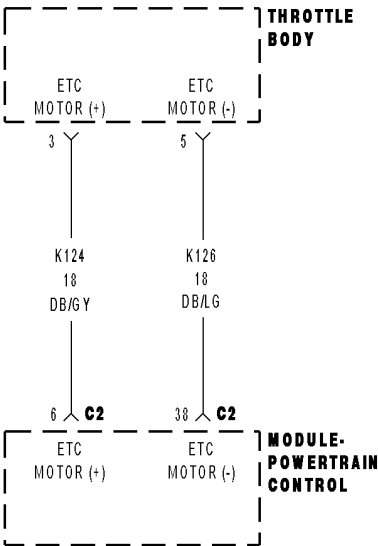

**Does the DTC return?**

**Yes** >> Replace the APPS Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT

## P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and the ETC Motor is not in Limp Home mode.

- **Set Condition:**

When the PCM detects an internal error or a short between the ETC Motor- and ETC Motor + circuits in the ETC Motor Driver. One trip fault. ETC light is flashing.

Possible Causes
THROTTLE PLATE / BORE INSPECTION (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE (K124) ETC POSITIVE CIRCUIT SHORTED TO (K126) ETC NEGATIVE CIRCUIT (K124) ETC POSITIVE CIRCUIT OPEN (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND (K126) ETC NEGATIVE CIRCUIT OPEN (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND ETC MOTOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

**Note: If the P2118 is intermittent, it is possible that the controller is overheating in extreme hot temperatures, and this is considered a normal protection operation. No repair is necessary.**

With a scan tool, read DTCs.

Look closely at the temperatures at which this DTC set.

#### Is the DTC active at this time?

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****2. THROTTLE PLATE INSPECTION**

Turn the ignition off.

Remove the Air Cleaner Assembly from the Throttle Body.

Check for any signs of a foreign material (ice or dirt) on the Throttle Plate or in the bore causing the Throttle Plate to stick.

**Were any signs of foreign material or scoring of the throttle plate or bore found?**

**Yes** >> Remove the debris if possible or replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K124) ETC POSITIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the C3/C PCM harness connector.

Ignition on, engine not running.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground, probe the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage on the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****4. (K126) ETC NEGATIVE CIRCUIT SHORTED TO BATTERY VOLTAGE**

Using a 12-volt test light connected to ground, probe the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Repair the short to battery voltage in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K124) ETC POSITIVE CIRCUIT SHORTED TO THE (K126) ETC NEGATIVE CIRCUIT**

Measure the resistance between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****6. (K124) ETC POSITIVE CIRCUIT OPEN**

Turn the ignition off.

Measure the resistance of the (K124) ETC Positive circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K124) ETC Positive circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. (K124) ETC POSITIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K124) ETC Positive circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K124) ETC Positive circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****8. (K126) ETC NEGATIVE CIRCUIT OPEN**

Measure the resistance of the (K126) ETC Negative circuit between the Throttle Body harness connector and the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K126) ETC Negative circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. (K126) ETC NEGATIVE CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K126) ETC Negative circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K126) ETC Negative circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2118-ELECTRONIC THROTTLE CONTROL MOTOR CIRCUIT (CONTINUED)****10. ETC MOTOR**

**Note:** Take the following measurement using special tool #8815 to avoid possible damage to the Throttle Body harness connector. Measure the resistance of the ETC Motor between the (K124) ETC Positive circuit and the (K126) ETC Negative circuit at the appropriate terminals of special tool #8815.

**Is the resistance between 2.5 and 25 ohms at closed throttle?**

**Yes** >> Go To 11

**No** >> Replace the Throttle Body Assembly. Disconnect the Battery when replacing the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**11. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW

± 2.7L/3.5L  
\*\*\* 5.7L

**P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on and no other APPS No.1 DTCs present.
- **Set Condition:**  
When the APP Sensor No.1 voltage is too low. Engine will additionally idle if the brake pedal is pressed or has failed. Acceleration rate and Engine output are limited. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
(F855) 5-VOLT SUPPLY CIRCUIT OPEN (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (K23) APP SENSOR NO.1 SIGNAL CIRCUIT OPEN (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K167) APP SENSOR NO.1 RETURN CIRCUIT (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K400) APP SENSOR NO.2 RETURN CIRCUIT APP SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. APP SENSOR BELOW 0.25 OF A VOLT**

Ignition on, engine not running.  
With a scan tool, read the APP Sensor No.1 voltage.

- Is the voltage below 0.25 of a volt?**
- Yes**    >> Go To 2
- No**     >> Go To 11

**P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****2. (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 8

**3. ACCELERATOR PEDAL POSITION SENSOR**

Connect a jumper wire between the (F855) 5-volt Supply circuit and the (K23) APP Sensor No.1 Signal circuit in the Sensor harness connector.

With a scan tool, monitor the APP Sensor No.1 voltage.

**Is the voltage above 4.5 volts?**

**Yes** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note:** Remove the jumper wire before continuing.

**P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****4. (K23) APP SENSOR NO.1 SIGNAL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K23) APP Sensor No.1 Signal circuit from the APP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K23) APP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K23) APP Sensor No.1 Signal circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K23) APP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

## P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)

### 6. (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K167) APP SENSOR NO.1 RETURN CIRCUIT

Measure the resistance between the (K23) APP Sensor No.1 Signal circuit and the (K167) Sensor No.1 Return circuit at the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K167) APP Sensor No.1 Return circuit and the (K23) APP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

### 7. (K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K400) APP SENSOR NO.2 RETURN CIRCUIT

Measure the resistance between the (K23) APP Sensor No.1 Signal circuit and the (K400) Sensor No.2 Return circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K400) APP Sensor No.2 Return circuit and the (K23) APP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****8. (F855) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F855) 5-volt Supply circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (F855) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2122-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT LOW (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**11. APP SENSOR SWEEP**

Ignition on, engine not running.

With a scan tool, monitor the APP Sensor No.1 voltage.

Slowly press the Accelerator pedal down.

**Does voltage start at approximately 0.45 of a volt and go above 4.6 volts with a smooth transition?**

- Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2123-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT HIGH**

± 2.7L/3.5L  
\*\*\* 5.7L

**P2123-ACCELERATOR PEDAL POSITION SENSOR 1 CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and no other APPS No.1 DTCs present.

- **Set Condition:**

When APP Sensor No.1 voltage is too high. Engine will additionally idle if the brake pedal is pressed or has failed. Acceleration rate and Engine output are limited. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
(K23) APP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K23) APP SENSOR NO.1 SIGNAL SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT
(K23) APP SENSOR NO.1 SIGNAL SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT
(K167) APP SENSOR NO.1 RETURN CIRCUIT OPEN
APP SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. APPS NO.1 VOLTAGE ABOVE 4.8 VOLTS**

Ignition on, engine not running.

With a scan tool, read the APP Sensor No.1 voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 2

**No** >> Go To 8

## P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW

† 2.7L/3.5L  
\*\*\* 5.7L

**P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and no other APPS No.2 DTCs present.

- **Set Condition:**

When the APP Sensor No.2 voltage is too low. Engine will only idle if the Brake pedal is Pressed or has failed. Acceleration rate and Engine output are limited. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
(F856) 5-VOLT SUPPLY CIRCUIT OPEN
(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
(K29) APP SENSOR NO.2 SIGNAL CIRCUIT OPEN
(K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND
(K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K167) APP SENSOR NO.1 RETURN CIRCUIT
(K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K400) APP SENSOR NO.2 RETURN CIRCUIT
APP SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. APP SENSOR BELOW 0.25 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the APP Sensor No.1 voltage.

**Note: Sensor No. 2 is pulled low by the PCM as part of its system testing. This test happens a couple of times a second. So you can expect to see voltages close to zero occasionally with a normal sensor.**

**Is the voltage consistently below 0.25 of a volt?**

**Yes** >> Go To 2

**No** >> Go To 11

**P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****2. (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 8

**3. ACCELERATOR PEDAL POSITION SENSOR**

Connect a jumper wire between the (F856) 5-volt Supply circuit and the (K29) APP Sensor No.2 Signal circuit in the Sensor harness connector.

With a scan tool, monitor the APP Sensor No.2 voltage.

**Is the voltage above 4.5 volts with the jumper wire installed?**

**Yes** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note:** Remove the jumper wire before continuing.

#### 4. (K29) APP SENSOR NO.2 SIGNAL CIRCUIT OPEN

Disconnect the PCM harness connectors.

**P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****6. (K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K400) APP SENSOR NO.2 RETURN CIRCUIT**

Measure the resistance between the (K29) APP Sensor No.2 Signal circuit and the (K400) Sensor No.2 Return circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K400) APP Sensor No.2 Return circuit and the (K29) APP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K167) APP SENSOR NO.1 RETURN CIRCUIT**

Measure the resistance between the (K29) APP Sensor No.2 Signal circuit and the (K167) Sensor No.1 Return circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K167) APP Sensor No.1 Return circuit and the (K29) APP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****8. (F856) 5-VOLT SUPPLY CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F856) 5-volt Supply circuit from the Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (F856) 5-volt Supply circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2127-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT LOW (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**11. APP SENSOR SWEEP**

Ignition on, engine not running.

With a scan tool, monitor the APP Sensor No.2 voltage.

Slowly press the Accelerator pedal down.

**Does voltage start at approximately 0.22 of a volt and go above 2.31 volts with a smooth transition?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

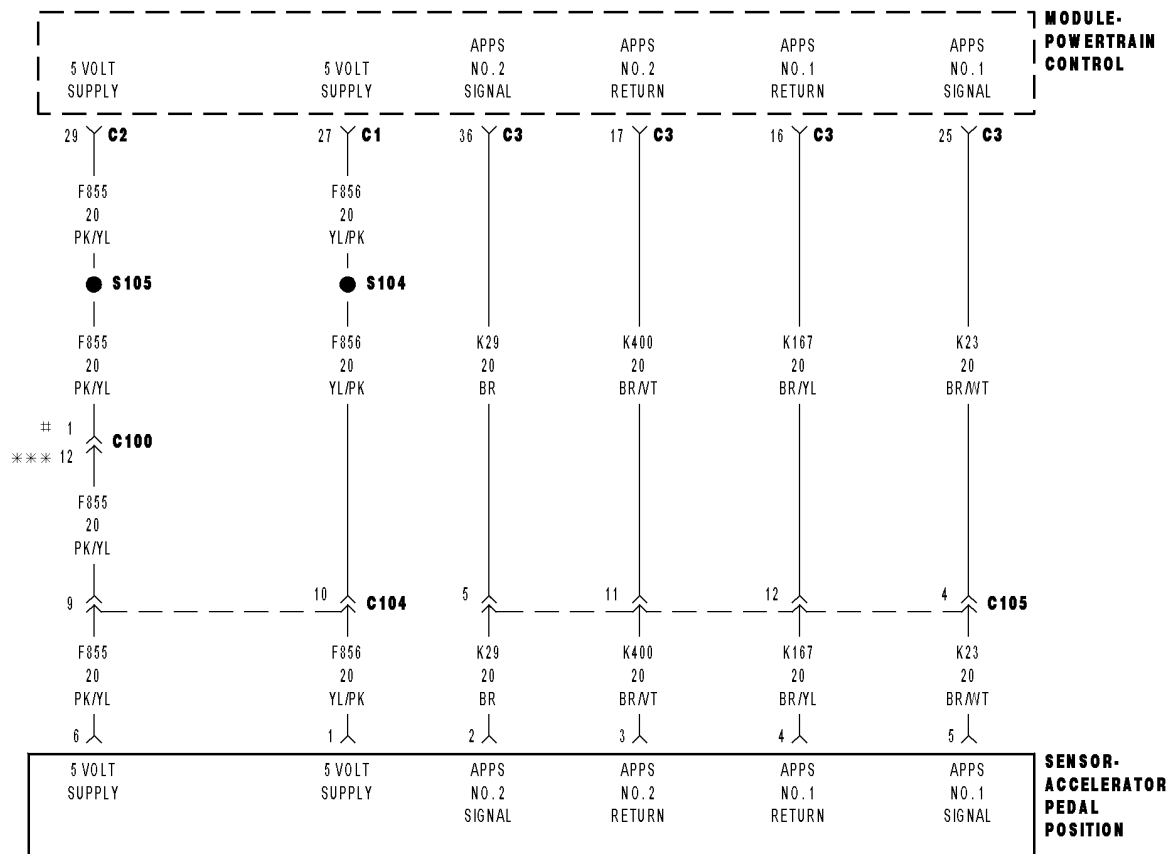

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P2128-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT HIGH

± 2.7L/3.5L  
\*\*\* 5.7L

**P2128-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
With the ignition on and no other APPS No.2 DTCs present.
- **Set Condition:**  
When APP Sensor No.2 voltage is too high. Idle is additionally forced any time the brake is applied or failed. Acceleration rate and Engine output are limited. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
(K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
(K29) APP SENSOR NO.2 SIGNAL SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT
(K29) APP SENSOR NO.2 SIGNAL SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT
(K400) APP SENSOR NO.2 RETURN CIRCUIT OPEN
APP SENSOR
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. APPS NO.2 VOLTAGE ABOVE 3.0 VOLTS**

Ignition on, engine not running.  
With a scan tool, read the APP Sensor No.2 voltage.

**Note:** Diagnose any 5-Volt Supply DTCs before continuing.

- Is the voltage above 3.0 volts?**
- Yes**    >> Go To 2
- No**    >> Go To 8

**P2128-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)****2. ACCELERATOR PEDAL POSITION SENSOR**

Turn the ignition off.

Disconnect the APP Sensor harness connector

Using a jumper wire, connect it from the (K29) APP Sensor Signal circuit and the Sensor ground circuit.

Turn the ignition on.

With a scan tool, monitor the Accelerator Pedal Position Sensor voltage.

**Is the voltage at 0 volt?**

**Yes** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K29) APP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K29) APP Sensor No.2 Signal circuit in the APP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K29) APP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**P2128-ACCELERATOR PEDAL POSITION SENSOR 2 CIRCUIT HIGH (CONTINUED)****4. (K29) APPS NO.2 SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Measure the resistance between the (K29) APP Sensor No.2 Signal circuit and the (F856) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the resistance below 10 ohms?**

**Yes** >> Repair the short between the (K29) APP Sensor No.2 Signal circuit and the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K29) APPS NO.2 SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance between the (K29) APP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit in the APP Sensor harness connector.

**Is the resistance below 10 ohms?**

**Yes** >> Repair the short between the (K29) APP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)**

For the Engine System Schematic circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

With the ignition on and no other DTCs present for TP Sensor No.1 or No.2.

- **Set Condition:**

PCM recognizes TP Sensors No.1 and No.2 are not coherent. One trip fault and the code will set within 5 seconds. ETC light is illuminated.

Possible Causes
(K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE
RESISTANCE IN THE (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT
(K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND
RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT
(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND
RESISTANCE IN THE (K922) SENSOR GROUND CIRCUIT
(K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO (K122) TP SENSOR NO.2 SIGNAL CIRCUIT
THROTTLE POSITION SENSOR
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The throttle plate and linkage should be free from binding and carbon build up.

**Note:** Make sure the throttle plate is at the idle position.

Ignition on, engine not running.

**Note:** Inspect the engine for vacuum leaks.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 11

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****2. (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connector.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (K22) TP No.1 Signal and the (K122) TP No.2 Signal circuits in the Throttle Body harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K22) TP Sensor No.1 or (K122) TP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****3. THROTTLE POSITION SENSOR**

Turn the ignition off.

Connect the PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor No.1 and No.2 voltage.

Connect a jumper wire between the (K922) Sensor Return circuit and the (K22) TP Sensor No.1 Signal circuit.

TP Sensor No.1 voltage should change from approximately 4.5 volts to 0.5 of a volt?

For TP Sensor No.2, connect a jumper wire between (F855) 5-volt supply circuit and the (K122) TP Sensor No.2 signal circuit.

TP Sensor No.2 voltage should change from approximately 0 volts to 5.0 volts?

**Is the voltage reading within the listed specification with the jumper wire installed?**

**Yes** >> Replace the Throttle Body Assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**Note:** Remove the jumper wire before continuing.

## P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)

### 4. EXCESSIVE RESISTANCE IN THE (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.2 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815. Measure the resistance of the (K122) TP Sensor No.2 Signal circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (K22) TP Sensor No.1 or (K122) TP Sensor No.2 Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****5. (K22) TP SENSOR NO.1 OR (K122) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit and the (K122) TP Sensor No.2 Signal circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms for either circuit?**

**Yes** >> Repair the short to ground in the (K22) TP No.1 Signal or (K122) TP No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****6. EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. (F855) 5-VOLT SUPPLY SHORTED TO GROUND**

Measure the resistance between ground and the (F855) 5-volt Supply circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****8. EXCESSIVE RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. (K22) TP SENSOR NO.1 SIGNAL SHORTED TO (K122) TP SENSOR NO.2 SIGNAL**

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (K122) TP Sensor No.2 Signal circuit at the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K122) TP Sensor No.2 Signal circuit and the (K22) TP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2135-THROTTLE POSITION SENSOR 1/2 CORRELATION (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**If there are no possible causes remaining, review repair.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**11. THROTTLE FOLLOWER TEST**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test and monitor the TP Sensor No.1 or No.2 voltage.

Slowly press the throttle pedal down.

The voltage for TP Sensor No.1 should start at approximately 0.8 of a volt and increase to above 4.2 volts.

The voltage for TP Sensor No.2 should start at approximately 4.2 volts and decrease to approximately 0.8 of a volt.

**Is the voltage within the range of the listed specification for the appropriate Sensor?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Disconnect the Battery when replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION

† 2.7L/3.5L  
\*\*\* 5.7L

### P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- When Monitored:**  
 With the ignition on and no APPS No.1 and APPS No.2 DTC present.
- Set Condition:**  
 APPS values No.1 and No.2 are not coherent. Idle is additionally forced when the brake pedal is pressed or failed. Acceleration rate and Engine output are limited. One trip fault and the code will set within 5 seconds. ETC light is flashing.

Possible Causes
EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT EXCESSIVE RESISTANCE IN THE (K167) SENSOR NO.1 RETURN CIRCUIT EXCESSIVE RESISTANCE IN THE (K400) SENSOR NO.2 RETURN CIRCUIT EXCESSIVE RESISTANCE IN THE (K23) APP SENSOR NO.1 SIGNAL CIRCUIT EXCESSIVE RESISTANCE IN THE (K29) APP SENSOR NO.2 SIGNAL CIRCUIT APP SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note:** Repair any other 5-Volt Supply or APPS High and Low DTCs before diagnosing P2138.

**Is the DTC active at this time?**

- Yes**    >> Go To 2
- No**     >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION (CONTINUED)****2. EXCESSIVE RESISTANCE IN THE (K23) APPS NO.1 SIGNAL CIRCUIT**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the PCM harness connector.

Measure the resistance of (K23) APP Sensor No.1 Signal circuit from the APP Sensor harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance in the (K23) APP Sensor No.1 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. EXCESSIVE RESISTANCE IN THE (K29) APPS NO.2 SIGNAL CIRCUIT**

Measure the resistance of (K29) APPS No.2 Signal circuit from the APP Sensor harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K29) APP Sensor No.2 Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION (CONTINUED)****4. EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT**

Measure the resistance of the (F855) 5-volt Supply circuit from the APP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Disconnect the C1/A PCM harness connector.

Measure the resistance of the (F856) 5-volt Supply circuit from the APP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION (CONTINUED)****6. EXCESSIVE RESISTANCE IN THE (K167) SENSOR NO.1 RETURN CIRCUIT**

Measure the resistance of the (K167) APP Sensor No.1 Return circuit from the APP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the excessive resistance in the (K167) Sensor No.1 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. EXCESSIVE RESISTANCE IN THE (K400) SENSOR NO.2 RETURN CIRCUIT**

Measure the resistance of the (K400) APP Sensor No.2 Return circuit from the APP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the excessive resistance in the (K400) Sensor No.2 Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2138-ACCELERATOR PEDAL POSITION SENSOR 1/2 CORRELATION (CONTINUED)****8. CHECKING APPS NO.1 AND NO.2 WITH A LAB SCOPE**

Ignition on, engine not running.

Set up a lab scope in a way that you can view two graphs simultaneously.

Backprobe (K23) APP Sensor No.1 Signal circuit using Channel 1 at the APP Sensor harness connector.

Backprobe (K29) APP Sensor No.2 Signal circuit using Channel 2 at the APP Sensor harness connector.

Slowly press and release the Accelerator Pedal while monitoring the lab scope screen.

**Does the scope pattern show any missing or erratic signals?**

**Yes** >> Replace the APP Sensor Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function to relearn the APPS values.

Go To 9

**No** >> Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**9. PCM**

**Note: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Not Equipped with ABS)**

**P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Not Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and battery voltage greater than 10 volts. Transmission in Drive or Reverse.

- **Set Condition:**

The PCM recognizes the vehicle speed in No. 2 is erratic or high. No MIL and no ETC light. Cruise Control is disabled.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCs
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The following items must be checked before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the Front Control Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All Vehicle Speed DTCs that may be active in the Front Control Module or in the Transmission Control Module **MUST** be diagnosed.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Not Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

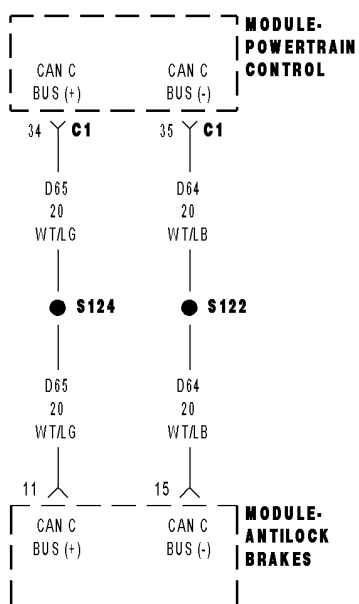

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Equipped with ABS)

**P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Equipped with ABS) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on and battery voltage greater than 10 volts. Transmission in Drive or Reverse.
- **Set Condition:**  
The PCM recognizes the vehicle speed signal No. 2 is erratic or high. No MIL and no ETC light. Cruise Control is disabled.

Possible Causes
ACTIVE BUS OR COMMUNICATION DTCs
TIRE CIRCUMFERENCE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test**

**1. ACTIVE DTC**

**Note:** The following items must be checked before continuing.

- Pinion Factor and Tire Size **MUST** be programmed in the ABS Module.
- All Bus Communication DTCs **MUST** be diagnosed.
- All related Vehicle Speed and Wheel Speed DTCs that may be active in the ABS Module **MUST** be diagnosed. Refer to the ABS diagnostic information for the correct procedure.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes**    >> Go To 2

**No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2161-VEHICLE SPEED SENSOR 2 ERRATIC (Equipped with ABS) (CONTINUED)****2. VISUAL INSPECTION**

**Note:** This code can set due following conditions.

- Unequal tire circumference between the tires on the vehicle.
- Front or Rear wheels moving while the opposite wheels are not. (i.e., wheels slipping on loose gravel, ice or hard acceleration)

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any of the above conditions found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P2166-ACCELERATOR PEDAL POSITION SENSOR 1 MAXIMUM STOP PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on. During in plant mode the APP Sensors need to be checked to make sure that idle and full pedal travel can be reached on both sensors.

- **Set Condition:**

APPS No.1 has failed to achieve the required maximum value during In Plant testing. One trip fault and the code will set within 5 seconds. Engine will only idle.

Possible Causes
IN PLANT TEST FAILURE
APPS RELEARN

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. IN PLANT TEST FAILURE

Ignition on, engine not running.

**Note: This DTC is set when the APP Sensors are learned in plant but do not reach the Minimum or Maximum voltage range.**

With a scan tool read DTCs.

With the scan tool, erase DTCs.

Start the engine.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

#### 2. APPS RELEARN

With a scan tool select the ETC RELEARN function.

Next, erase DTCs.

Start the engine.

**Does the DTC return?**

**Yes** >> Replace the APPS Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## P2167-ACCELERATOR PEDAL POSITION SENSOR 2 MAXIMUM STOP PERFORMANCE

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on. During in plant mode the APP Sensors need to be checked to make sure that idle and full pedal travel can be reached on both sensors.

- **Set Condition:**

APPS No.2 has failed to achieve the required maximum value during In Plant testing. One trip fault and the code will set within 5 seconds. Engine will only idle.

Possible Causes
IN PLANT TEST FAILURE
APPS RELEARN

### Diagnostic Test

#### 1. IN PLANT TEST FAILURE

Ignition on, engine not running.

**Note: This DTC is set when the APP Sensors are learned in plant but do not reach the Minimum or Maximum voltage range.**

With a scan tool read DTCs.

With the scan tool, erase DTCs.

Start the engine.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

#### 2. APPS RELEARN

With a scan tool select the ETC RELEARN function.

Next, erase DTCs.

Start the engine.

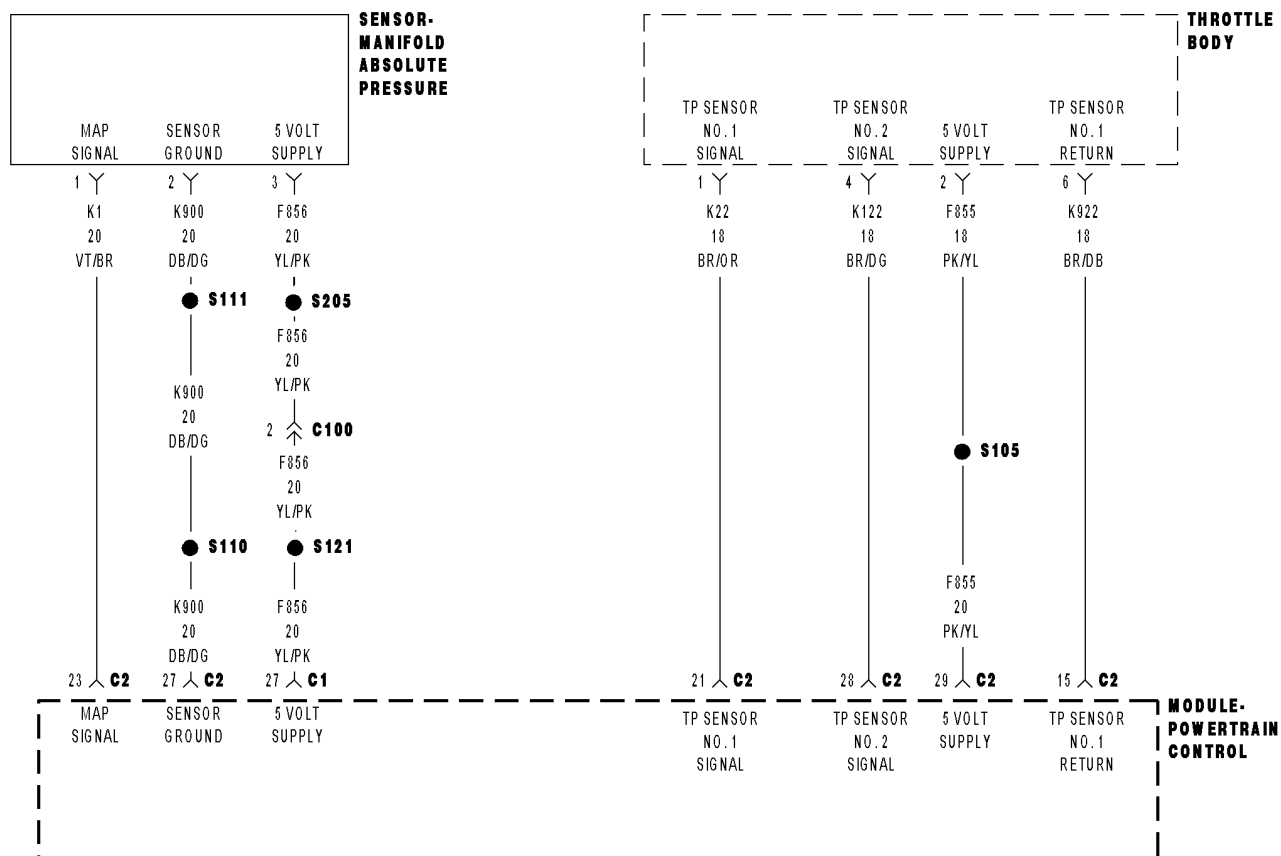

**Does the DTC return?**

**Yes** >> Replace the APPS Assembly per Service Information. After installation is complete, use a scan tool and select the ETC RELEARN function.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

# P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION)

**MODULE-  
POWERTRAIN  
CONTROL C1**

**SENSOR-  
MANIFOLD ABSOLUTE  
PRESSURE**

**THROTTLE  
BODY**

**MODULE-  
POWERTRAIN  
CONTROL C2**

## P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and engine running with no MAP Sensor DTCs.

- **Set Condition:**

A large vacuum leak has been detected or both of the TP Sensors have failed based on their position being 2.5 volts and the calculated MAP value is less than the actual MAP minus an Offset value. One trip fault and the code will set within 5 seconds. ETC light will flash.

Possible Causes
<p>VACUUM LEAK</p> <p>RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT</p> <p>(F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND</p> <p>RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT</p> <p>(K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND</p> <p>RESISTANCE IN (K900) SENSOR GROUND CIRCUIT</p> <p>RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT</p> <p>(F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND</p> <p>RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT</p> <p>TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND</p> <p>RESISTANCE IN THE (K922) TP SENSOR RETURN CIRCUIT</p> <p>MAP SENSOR</p> <p>TP SENSOR</p> <p>PCM</p>

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The most likely cause of this DTC is a vacuum leak.

**Note:** Diagnose any 5-Volt Supply, TP Sensor, Fuel System Lean or Rich, or MAP Sensor DTCs before continuing.

**Note:** The throttle plate should be free from binding and carbon build up.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****2. VACUUM LEAK**

**Note:** This code is enabled on engines with a plastic intake manifold and is intended to limit the maximum engine speed if a large crack occurs.

**Note:** A large vacuum leak is most likely the cause of this DTC.

Inspect the Intake Manifold and Throttle body for leaks and cracks.

Inspect the Power Brake Booster for any vacuum leaks.

Inspect the PCV system for proper operation or any vacuum leaks.

Inspect the MAP Sensor for proper installation.

**Were any vacuum leaks found?**

**Yes** >> Repair the vacuum leak as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. MAP SENSOR OPERATION**

Start the engine.

With a scan tool, monitor the MAP Sensor voltage.

Snap the Accelerator pedal.

**Does the MAP Sensor voltage vary from below 2.0 volts at idle to above 3.5 volts at Wide Open Throttle?**

**Yes** >> Go To 4

**No** >> Go To 11

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****4. TP SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test.

TP Sensor No.1 should start at approximately 0.8 of a volt and increase to 4.2 volts.

TP Sensor No.2 should start at approximately 4.2 volts and decrease to 0.8 of a volt.

**Is the voltage transition smooth between the appropriate values?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance above 100 ohms?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****6. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and (F855) 5-volt Supply circuit at the appropriate terminal of the special tool #8815.

**Is the resistance above 100 ohms?**

**Yes** >> Go To 7

**No** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. TP SENSOR**

Connect the PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

TP Sensor No.1 voltage should start at approximately 4.8 volts and decrease to 0.2 of a volt.

Connect a jumper wire between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

TP Sensor No.2 voltage should start at approximately 0 volts and increase to 4.8 to 5.2 volts.

**Does the TP Sensor voltage change to the appropriate voltage with the jumper wire installed?**

**Yes** >> Disconnect the Battery before replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****8. RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K22) and (K122) TP Signal circuits from the Throttle Body harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****9. TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) and (K122) TP Signal circuits at the appropriate terminal of the special tool #8815.

**Is the resistance above 100 ohms for each circuit?**

**Yes** >> Go To 10

**No** >> Repair the short to ground in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

### 10. RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 11. RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Disconnect the C1/A PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 13

**No** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**13. MAP SENSOR**

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit in the MAP Sensor harness connector.

Cycle the ignition switch from off to on.

With a scan tool, monitor the MAP Sensor voltage.

**Does the scan tool display MAP voltage from approximately 4.9 volts to below 0.5 volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 14

**Note:** Remove the jumper wire before continuing.

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****14. RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the excessive resistance in the (K1) MAP Signal circuit

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**15. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 16

**No** >> Repair the short to ground in the (K1) MAP Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2172-HIGH AIRFLOW/VACUUM LEAK DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****16. RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION)

**MODULE-POWERTRAIN CONTROL C1**

**SENSOR-MANIFOLD ABSOLUTE PRESSURE**

**THROTTLE BODY**

**MODULE-POWERTRAIN CONTROL C2**

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and engine running with no MAP Sensor DTCs.

- **Set Condition:**

A large vacuum leak has been detected or both of the TP Sensors have failed based on their position being 2.5 volts and the calculated MAP value is less than the Gas Flow Adaptation value is too high. One trip fault the code will set within 5 seconds. ETC light will flash.

Possible Causes
VACUUM LEAK RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (K900) SENSOR GROUND CIRCUIT RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K922) TP SENSOR RETURN CIRCUIT MAP SENSOR TP SENSOR PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The most likely cause of this DTC is a vacuum leak.

**Note:** Diagnose any 5-Volt Supply, TP Sensor, Oxygen Sensor, Fuel related, or MAP Sensor DTCs before continuing.

**Note:** The throttle plate should be free from binding and carbon build up.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****2. VACUUM LEAK**

**Note:** This code is enabled on engines with a plastic intake manifold and is intended to limit the maximum engine speed if a large crack occurs.

**Note:** A large vacuum leak is most likely the cause of this DTC.

Inspect the Intake Manifold and Throttle body for leaks and cracks.

Inspect the Power Brake Booster for any vacuum leaks.

Inspect the PCV system for proper operation or any vacuum leaks.

Inspect the MAP Sensor for proper installation.

**Were any vacuum leaks found?**

**Yes** >> Repair the vacuum leak as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. MAP SENSOR OPERATION**

Start the engine.

With a scan tool, monitor the MAP Sensor voltage.

Snap the Accelerator pedal.

**Does the MAP Sensor voltage vary from below 2.0 volts at idle to above 3.5 volts at Wide Open Throttle?**

**Yes** >> Go To 4

**No** >> Go To 11

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****4. TP SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test.

TP Sensor No.1 should start at approximately 0.8 of a volt and increase to 4.2 volts.

TP Sensor No.2 should start at approximately 4.2 volts and decrease to 0.8 of a volt.

**Is the voltage transition smooth between the appropriate values?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****6. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and (F855) 5-volt Supply circuit between the appropriate terminals of special tool #8815.

**Is the resistance above 100 ohms?**

**Yes** >> Go To 7

**No** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. TP SENSOR**

Connect the PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

TP Sensor No.1 voltage should start at approximately 4.8 volts and decrease to 0.2 of a volt.

Connect a jumper wire between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

TP Sensor No.2 voltage should start at approximately 0 volts and increase to 4.8 to 5.2 volts.

**Does the TP Sensor voltage change to the appropriate voltage with the jumper wire installed?**

**Yes** >> Disconnect the Battery before replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****8. RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K22) and (K122) TP Signal circuits from the Throttle Body harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****9. TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) and (K122) TP Signal circuits at the appropriate terminals of special tool #8815.

**Is the resistance above 100k ohms for each circuit?**

**Yes** >> Go To 10

**No** >> Repair the short to ground in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****10. RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**11. RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Disconnect the C1/A PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 13

**No** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**13. MAP SENSOR**

Connect the C1/A PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit in the MAP Sensor harness connector.

Cycle the ignition switch from off to on.

With a scan tool, monitor the MAP Sensor voltage.

**Does the scan tool display MAP voltage from approximately 4.9 volts to below 0.5 volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 14

**Note:** Remove the jumper wire before continuing.

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****14. RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the excessive resistance in the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**15. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K1) MAP Signal circuit at the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 16

**No** >> Repair the short to ground in the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2173-HIGH AIRFLOW/VACUUM LEAK DETECTED (SLOW ACCUMULATION) (CONTINUED)****16. RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

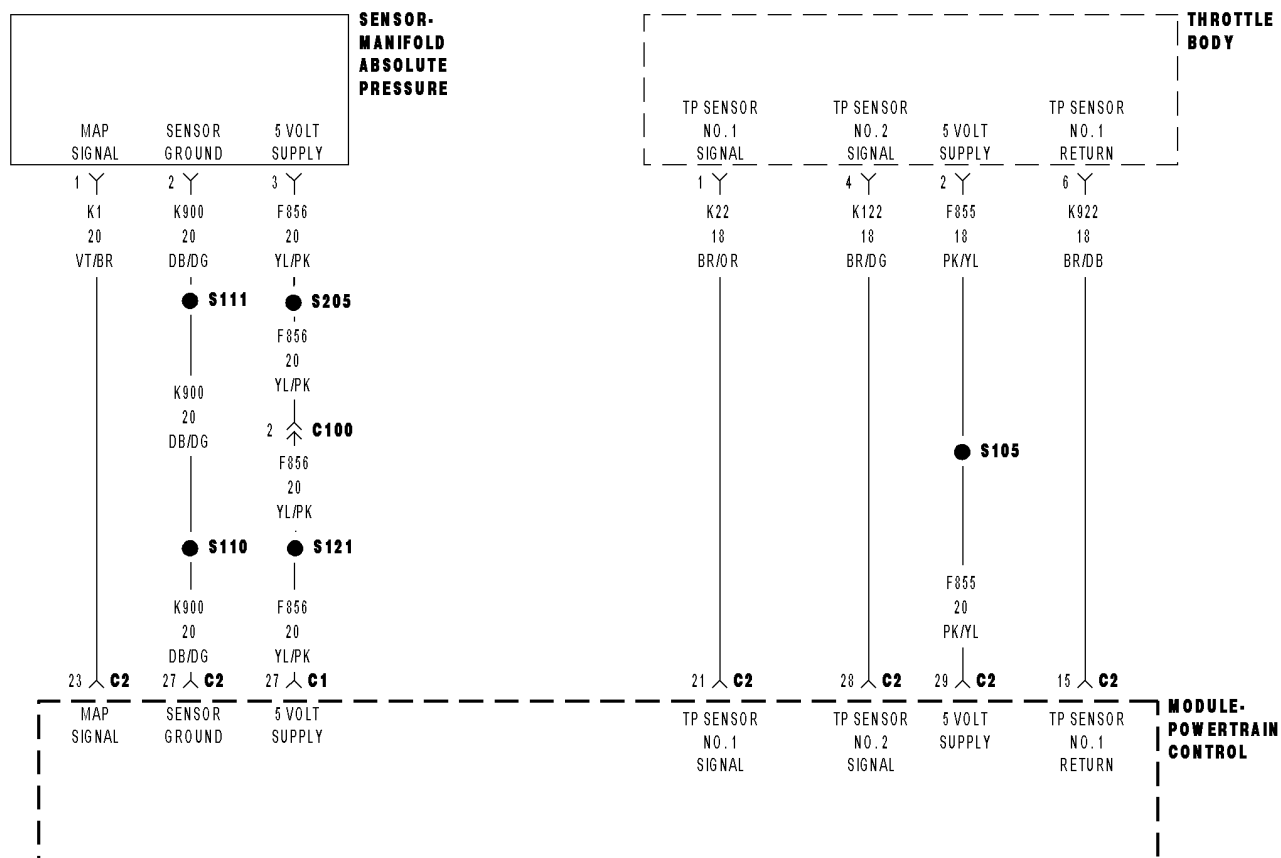

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION)

**MODULE-POWERTRAIN CONTROL C1**

**SENSOR-MANIFOLD ABSOLUTE PRESSURE**

**THROTTLE BODY**

**MODULE-POWERTRAIN CONTROL C2**

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and engine running with no MAP Sensor DTCs.

- **Set Condition:**

PCM calculated MAP value is greater than actual MAP value plus an offset value. One trip fault and the code will set within 5 seconds. Three good trips to turn of the MIL. ETC light will flash.

Possible Causes
RESTRICTED AIR INLET SYSTEM RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (K900) SENSOR GROUND CIRCUIT RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K922) TP SENSOR RETURN CIRCUIT MAP SENSOR TP SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The most likely cause of this DTC is a vacuum leak.

**Note:** Diagnose any 5-Volt Supply, TP Sensor, Fuel System Lean or Rich, or MAP Sensor DTCs before continuing.

**Note:** The throttle plate should be free from binding and carbon build up.

**Note:** Question the customer about weather conditions, as ICE build up on the blade can cause this fault when ambient is around +4 to -10 Celsius range.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****2. RESTRICTED AIR INLET SYSTEM**

Turn the ignition off.

Remove the Air Cleaner Assembly.

Remove the Air Filter.

Inspect the Throttle Body opening for signs of any foreign materials.

Check the intake tube/ air cleaner for obstructions.

**Were any restrictions found?**

**Yes** >> Repair the restriction as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. MAP SENSOR OPERATION**

Start the engine.

With a scan tool, monitor the MAP Sensor voltage.

Snap the Accelerator pedal.

**Does the MAP Sensor voltage vary from below 2.0 volts at idle to above 3.5 volts at Wide Open Throttle?**

**Yes** >> Go To 4

**No** >> Go To 11

**4. TP SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test.

TP Sensor No.1 should start at approximately 0.8 of a volt and increase to 4.2 volts.

TP Sensor No.2 should start at approximately 4.2 volts and decrease to 0.8 of a volt.

**Is the voltage transition smooth between the appropriate values?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

## P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

### 5. RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 6. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and (F855) 5-volt Supply circuit between the appropriate terminals of special tool #8815.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 7

**No** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****7. TP SENSOR**

Connect the PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

TP Sensor No.1 voltage should start at approximately 4.8 volts and decrease to 0.2 of a volt.

Connect a jumper wire between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

TP Sensor No.2 voltage should start at approximately 0 volts and increase to 4.8 to 5.2 volts.

**Does the TP Sensor voltage change to the appropriate voltage with the jumper wire installed?**

**Yes** >> Disconnect the Battery before replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

## P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

### 8. RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K22) and (K122) TP Signal circuits from the Throttle Body harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****9. TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) and (K122) TP Signal circuits at the appropriate terminals of special tool #8815.

**Is the resistance above 100 ohms for each circuit?**

**Yes** >> Go To 10

**No** >> Repair the short to ground in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

### 10. RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 11. RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Disconnect the C1/A PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 13

**No** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**13. MAP SENSOR**

Connect the C1/A PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit in the MAP Sensor harness connector.

Cycle the ignition switch from off to on.

With a scan tool, monitor the MAP Sensor voltage.

**Does the scan tool display MAP voltage from approximately 4.9 volts to below 0.5 volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 14

**Note:** Remove the jumper wire before continuing.

## P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)

### 14. RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the excessive resistance in the (K1) MAP Signal circuit

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 15. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 16

**No** >> Repair the short to ground in the (K1) MAP Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2174-LOW AIRFLOW/RESTRICTION DETECTED (INSTANTANEOUS ACCUMULATION) (CONTINUED)****16. RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

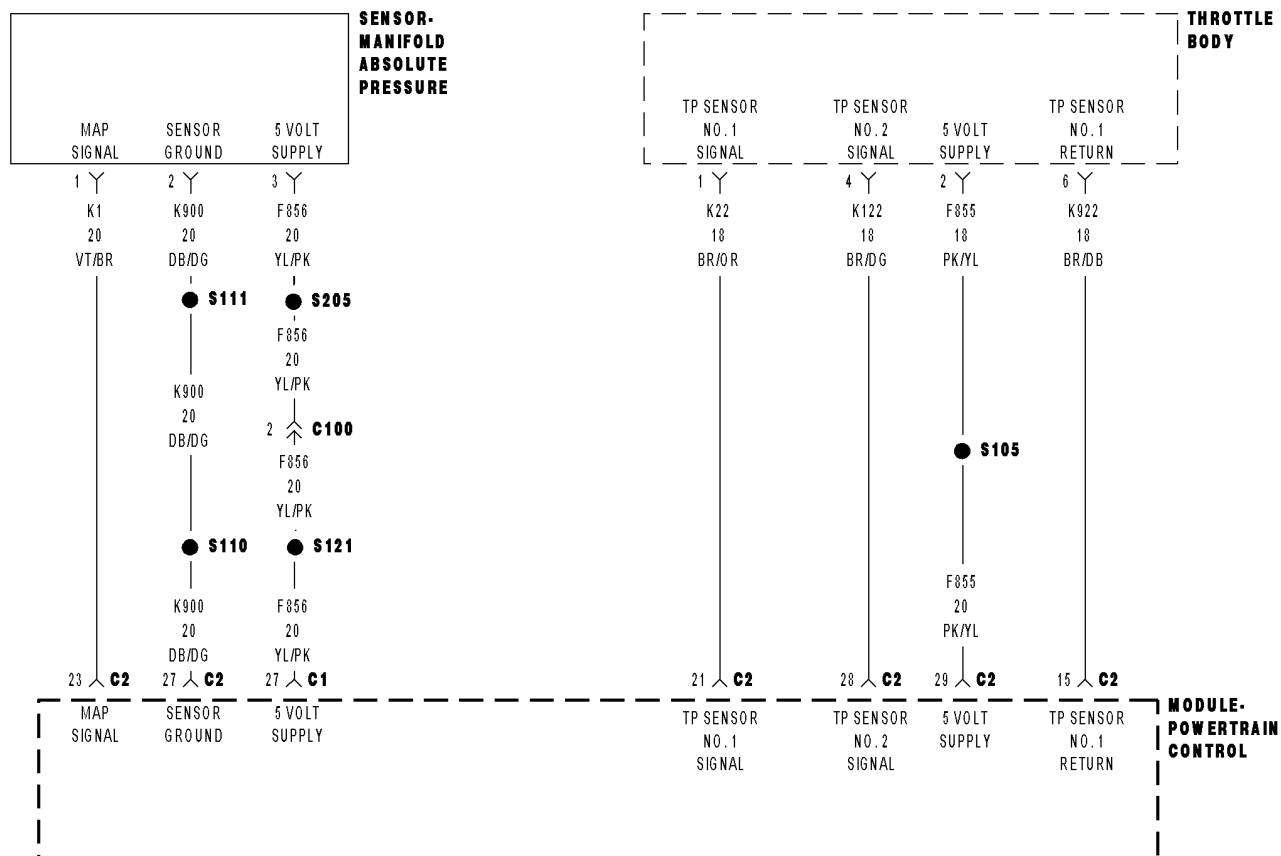

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on and engine running with no MAP Sensor DTCs.

- **Set Condition:**

PCM calculated MAP value is greater than actual MAP value plus an offset value. One trip fault and the code will set within 5 seconds. Three good trips to turn off the MIL. ETC light will flash.

Possible Causes
RESTRICTED AIR INLET SYSTEM RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN (K900) SENSOR GROUND CIRCUIT RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND RESISTANCE IN THE (K922) TP SENSOR RETURN CIRCUIT MAP SENSOR TP SENSOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** The most likely cause of this DTC is a vacuum leak.

**Note:** Diagnose any 5-Volt Supply, TP Sensor, Oxygen Sensor, Fuel related or MAP Sensor DTCs before continuing.

**Note:** The throttle plate should be free from binding and carbon build up.

**Note:** Question the customer about weather conditions, as ICE build up on the blade can cause this fault when ambient is around +4 to -10 Celsius range.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****2. RESTRICTED AIR INLET SYSTEM**

Turn the ignition off.

Remove the Air Cleaner Assembly.

Remove the Air Filter.

Inspect the Throttle Body opening for signs of any foreign materials.

Check the intake tube/ air cleaner for obstructions - include snow packing questions to customer.

**Were any restrictions found?**

**Yes** >> Repair the restriction as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. MAP SENSOR OPERATION**

Start the engine.

With a scan tool, monitor the MAP Sensor voltage.

Snap the Accelerator pedal.

**Does the MAP Sensor voltage vary from below 2.0 volts at idle to above 3.5 volts at Wide Open Throttle?**

**Yes** >> Go To 4

**No** >> Go To 11

**4. TP SENSOR OPERATION**

Ignition on, engine not running.

With a scan tool, perform the Throttle Follower Test.

TP Sensor No.1 should start at approximately 0.8 of a volt and increase to 4.2 volts.

TP Sensor No.2 should start at approximately 4.2 volts and decrease to 0.8 of a volt.

**Is the voltage transition smooth between the appropriate values?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****5. RESISTANCE IN (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Disconnect the PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**6. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and (F855) 5-volt Supply circuit between the appropriate terminals of special tool #8815.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 7

**No** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****7. TP SENSOR**

Connect the PCM harness connectors.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K922) Sensor Return circuit in the Throttle Body harness connector.

TP Sensor No.1 voltage should start at approximately 4.8 volts and decrease to 0.2 of a volt.

Connect a jumper wire between the (K122) TP Sensor No.2 Signal circuit and the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

TP Sensor No.2 voltage should start at approximately 0 volts and increase to 4.8 to 5.2 volts.

**Does the TP Sensor voltage change to the appropriate voltage with the jumper wire installed?**

**Yes** >> Disconnect the Battery before replacing the Throttle Body Assembly. Replace the Throttle Body Assembly. After installation is complete, use a scan tool and select the ETC RELEARN function

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****8. RESISTANCE IN THE TP SENSOR SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K22) and (K122) TP Signal circuits from the Throttle Body harness connector to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms for each circuit?**

**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****9. TP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K22) and (K122) TP Signal circuits at the appropriate terminals of special tool #8815.

**Is the resistance above 100k ohms for each circuit?**

**Yes** >> Go To 10

**No** >> Repair the short to ground in the (K22) or (K122) TP Sensor Signal circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)

**10. RESISTANCE IN THE (K922) SENSOR RETURN CIRCUIT**

Measure the resistance of the (K922) Sensor Return circuit from the Throttle Body harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K922) Sensor Return circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**11. RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Disconnect the C1/A PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)

### 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 13

**No** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 13. MAP SENSOR

Connect the C1/A PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit.

Cycle the ignition switch from off to on.

With a scan tool, monitor the MAP Sensor voltage.

**Does the scan tool display MAP voltage from approximately 4.9 volts to below 0.5 volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 14

**Note:** Remove the jumper wire before continuing.

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****14. RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT**

Turn the ignition off.

Disconnect the PCM harness connector.

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the excessive resistance in the (K1) MAP Signal circuit

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**15. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 16

**No** >> Repair the short to ground in the (K1) MAP Signal circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2175-LOW AIRFLOW/RESTRICTION DETECTED (SLOW ACCUMULATION) (CONTINUED)****16. RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**17. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

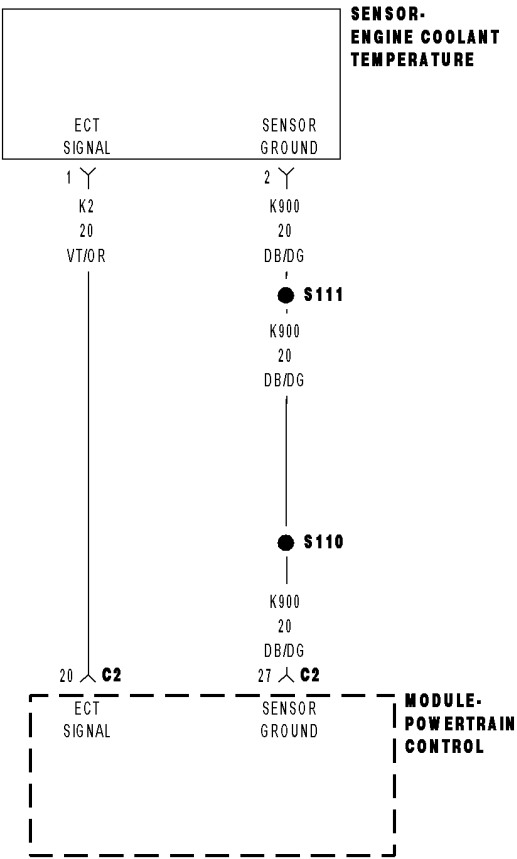

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

P2181-COOLING SYSTEM PERFORMANCE

## P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on, Engine running, and no ECT DTCs present.

- **Set Condition:**

PCM recognizes that the ECT has failed its self coherence test. The coolant temp should only change at a certain rate, if this rate is too slow or too fast this fault will set. Two trip fault. Three good trips to clear MIL. ETC light will illuminate on first trip failure.

Possible Causes
<p>LOW COOLANT LEVEL</p> <p>(K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE</p> <p>(K2) ECT SIGNAL CIRCUIT OPEN</p> <p>(K900) SENSOR GROUND CIRCUIT OPEN</p> <p>(K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND</p> <p>(K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND</p> <p>THERMOSTAT</p> <p>ECT SENSOR</p> <p>PCM</p>

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

**Note: If this code sets during extreme ambient temperatures, improper installation of a block heater could be the cause of this DTC.**

With a scan tool, read DTCs.

Diagnose all other ECT and Cooling System codes before continuing.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)****2. LOW COOLANT LEVEL**

**Note:** If a Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.

**Note:** Inspect the ECT terminals and related PCM terminals. Ensure the terminals are free from corrosion and damage.

**Note:** The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.

**Note:** Extremely cold outside ambient temperatures may have caused this DTC to set.

**Note:** Need to make sure that no Cooling System DTCs are set or changes that would make the warm up much slower or much faster: broken water pump can set this, addition of aftermarket auxiliary cooler can set this DTC.

**WARNING:** Never open the cooling system when the engine is hot. The system is under pressure. Failure to follow these instructions can result in personal injury or death. Allow the engine to cool before opening the cooling system.

Inspect the coolant system for proper level and condition.

**Is the coolant level and condition OK?**

**Yes** >> Go To 3

**No** >> Inspect the vehicle for a coolant leak and add the necessary amount of coolant.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**3. THERMOSTAT**

**Note:** This test works best if performed on a cold engine (cold soak).

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Tmp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**Note:** If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.

Start the Engine.

During engine warm-up monitor the Eng Coolant Tmp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**Note:** As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the Eng Coolant Tmp Deg on the scan tool should stay relatively close to each other.

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 4

**No** >> Replace the thermostat.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)

4. ECT SENSOR

Connect a jumper between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

Turn the ignition off.

Disconnect the ECT Sensor harness connector.

With a scan tool, read the ECT voltage.

Is the voltage below 1.0 volt?

- Yes
- >> Replace the ECT Sensor.
- Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No
- >> Go To 5

5. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.

Is the voltage above 5.2 volts?

- Yes
- >> Repair the short to battery voltage in the (K2) ECT Signal circuit.
- Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)
- No
- >> Go To 6

**P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)****6. (K2) ECT SIGNAL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K2) ECT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. (K900) SENSOR GROUND CIRCUIT OPEN**

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K900) Sensor ground circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)****8. (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 9

**9. (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT**

Measure the resistance between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K2) ECT Signal circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

**P2181-COOLING SYSTEM PERFORMANCE (CONTINUED)****10. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

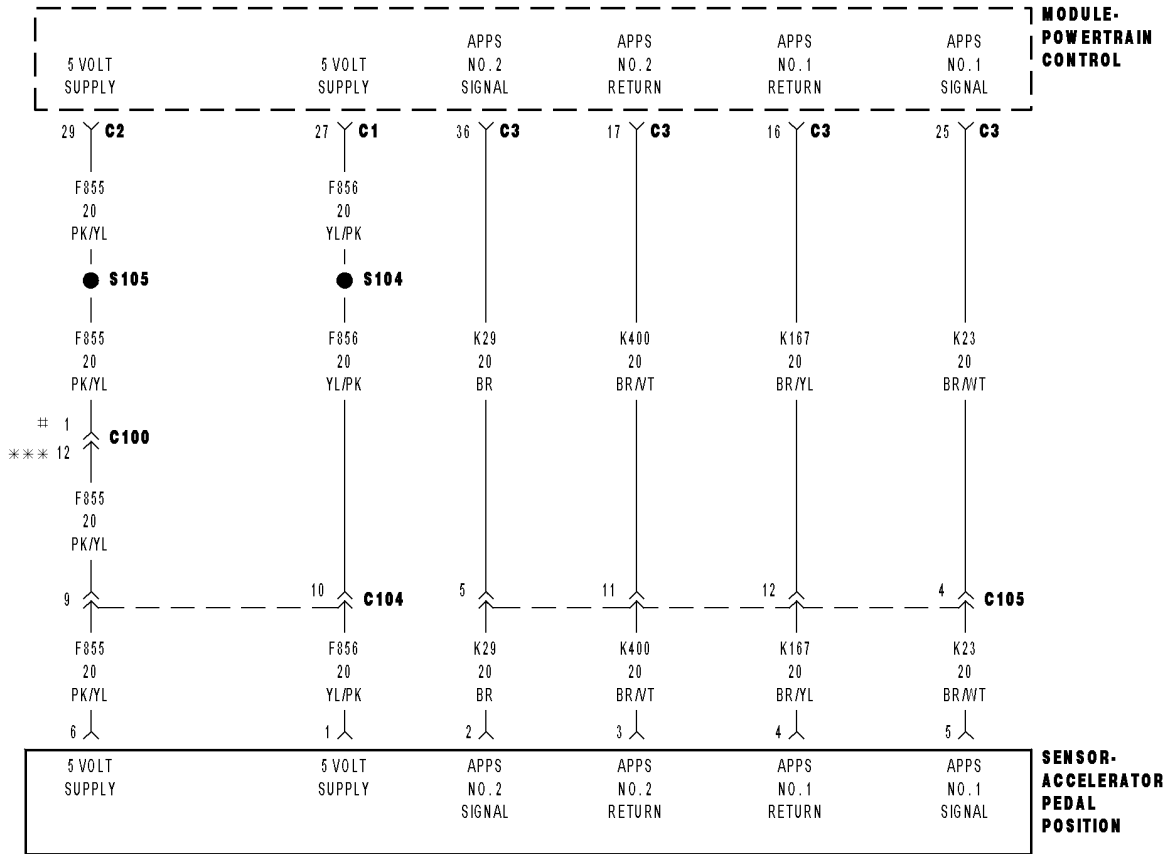

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

# P2299-BRAKE PEDAL POSITION / ACCELERATOR PEDAL POSITION INCOMPATIBLE

± 2.7L/3.5L  
\*\*\* 5.7L

**P2299-BRAKE PEDAL POSITION / ACCELERATOR PEDAL POSITION INCOMPATIBLE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on. No Break or APPS faults present.

- **Set Condition:**

The PCM recognizes a brake application following the APPS showing a fixed pedal opening. Temporary or permanent. Internally the PCM will reduce throttle opening below driver demand. One trip fault and the code will be set within 5 seconds. ETC light will illuminate, the light will only stay illuminated while DTC is active.

Possible Causes
CUSTOMER PRESSING ACCELERATOR PEDAL, THEN PRESSING BRAKE PEDAL, AND CONTINUES HOLDING THEM DOWN SIMULTANEOUSLY
STOP LAMP SWITCH
APP SENSOR

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. DTC INFORMATION

**Note:** If a pedal assembly becomes mechanically stuck the voltage output will stay fixed, if this is also followed by a long application of the brakes this code will set.

**Note:** When this code sets the pedal position in the PCM software will ramp to idle. If the Pedal voltage changes OR the brake pedal is released, the pedal position in the PCM software will ramp up to the pedal position and the ETC light will go out.

With a scan tool, read DTCs and record the related Freeze Frame data.

Diagnose all other Stop Lamp Switch and APP Sensor codes before continuing.

This code can be set by a driver who uses both feet while driving, one for the Accelerator Pedal and the other for the Brake Pedal.

**Note:** The most likely cause of this DTC is caused by the customer Brake Torquing the engine by pressing the Accelerator pedal and the pressing the Brake Pedal.

Ask the driver of the vehicle if these conditions apply to their driving habits.

**Are the listed conditions part of the customers driving habits?**

**Yes** >> Advise the customer of what caused the DTC. This is normal operation of a ETC equipped vehicle because of safety issues.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

**P2299-BRAKE PEDAL POSITION / ACCELERATOR PEDAL POSITION INCOMPATIBLE (CONTINUED)****2. STOP LAMP SWITCH OPERATION**

With a scan tool, read both Stop Lamp Switch statuses while pressing and releasing the Brake Pedal.

**Does the scan tool display the Pressed and Released while pressing and releasing the Pedal?**

**Yes** >> Go To 3

**No** >> Check the Stop Lamp Switch for proper installation and check the related circuits for opens and shorts using the appropriate wiring diagram. If OK, replace the Stop Lamp Switch assembly.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. APP SENSOR SWEEP**

Ignition on, engine not running.

With a scan tool, monitor both APP Sensor voltage readings.

Slowly press the accelerator pedal from idle until it reaches the end stop near the floor.

APPS No.1 voltage should start at approximately 0.45 of a volt and increase to approximately 4.6 volts with a smooth transition.

APPS No.2 voltage should start at approximately 0.22 of a volt and increase to approximately 2.31 volts with a smooth transition.

**Does the voltage for the appropriate sensor follow the list specification?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

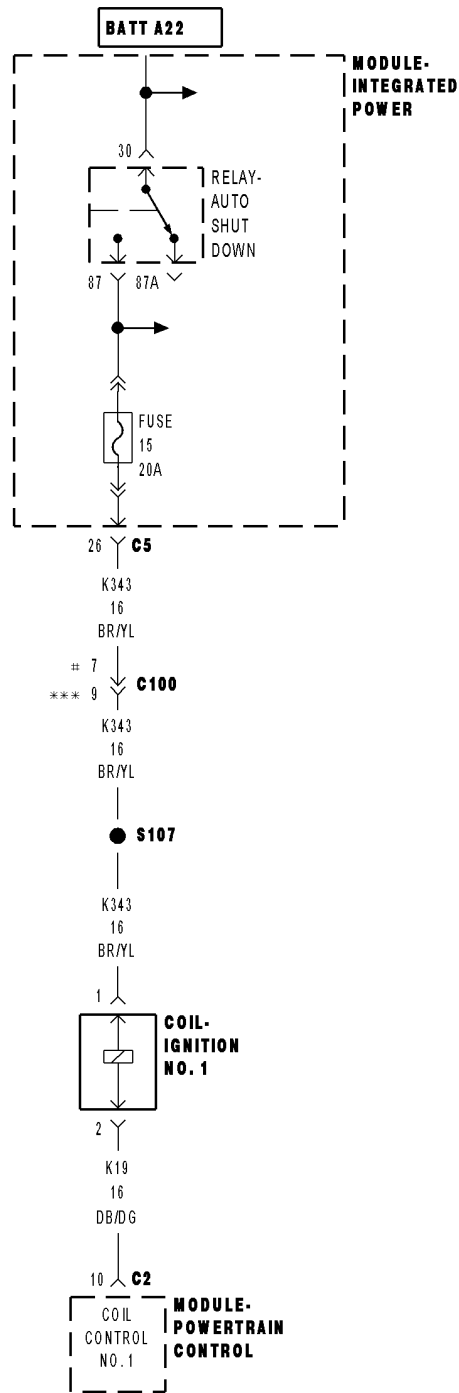

**No** >> Check the Signal and Return circuits for opens and shorts. If OK, Replace the APP Sensor Assembly per Service Information. After installation is complete, with a scan tool select the ETC RELEARN function to relearn the APPS values.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION

# 2.7L/3.5L

\*\*\* 5.7L

**P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and battery voltage greater than 10 volts.

- **Set Condition:**

If PCM detects that the secondary ignition burn time is incorrect, too short, or not present, an error is detected.  
One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT
(K19) COIL CONTROL NO.1 CIRCUIT OPEN
(K19) COIL CONTROL NO.1 CIRCUIT SHORTED TO GROUND
SPARK PLUG
COIL ON PLUG
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 9

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****2. SECONDARY SPARK**

**Note:** Inspect the ignition coil for damage, carbon tracking on the coil or a damaged spark plug insulator boot. If a problem is found, replace the ignition coil.

Turn the ignition off.

Remove the ignition coil.

Install a spark tester to the ignition coil.

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information. While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark generated?**

**Yes** >> Ensure the cylinder is operating properly. If OK, replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K343) ASD RELAY OUTPUT 2 CIRCUIT**

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Coil on Plug harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the (K343) ASD Relay Output 2 circuit between the IPM and Coil harness connector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Note:** Stop All Actuations.

**P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****4. IGNITION COIL RESISTANCE**

Turn the ignition off.

**Note:** The following resistance measurement should be taken at 70°-80° F.

Measure the resistance of the Ignition Coil.

**Is the resistance between 0.55 to 1.5 ohms at 77°F (25°C) for the Ignition Coil being tested?**

**Yes** >> Go To 5

**No** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. IGNITION COIL**

Using a 12-volt test light connected to a 12-volt source, probe the (K19) Coil Control No.1 circuit.

Crank the engine for 5 seconds while observing the test light.

**What is the condition of the test light while cranking the engine?**

**Brightly blinking.**

Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**ON constantly.**

Go To 6

**OFF constantly.**

Go To 7

**P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****6. (K19) COIL CONTROL NO.1 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K19) Coil Control No.1 circuit in the Ignition Coil harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K19) Coil Control No.1 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**7. (K19) COIL CONTROL NO.1 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K19) Coil Control No.1 circuit from the Ignition Coil harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K19) Coil Control No.1 circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**9. VISUAL AND PHYSICAL INSPECTION**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broken electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

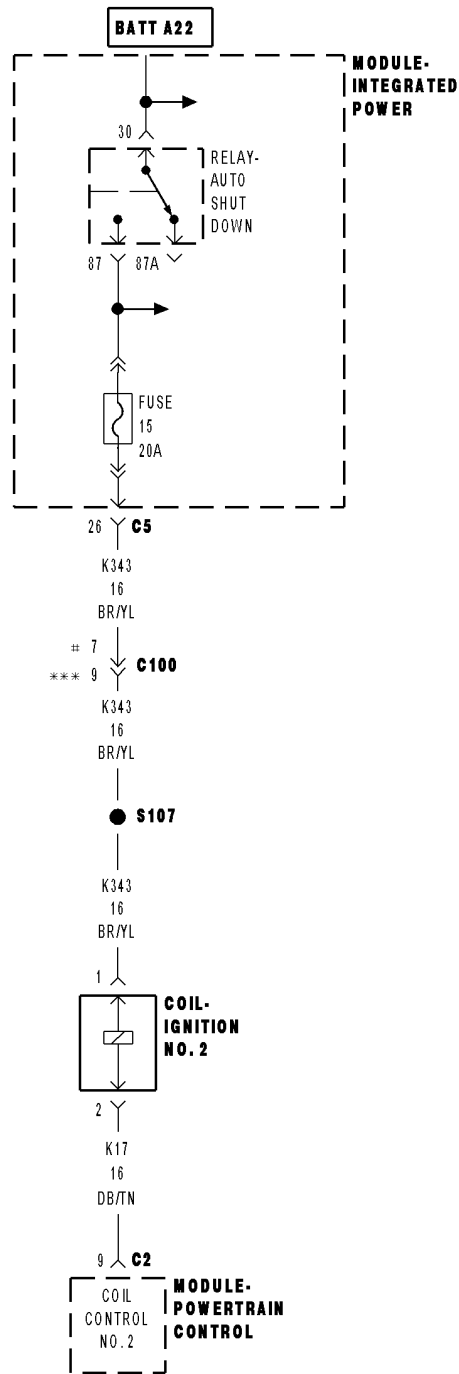

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Refer to the INTERMITTENT CONDITION symptom in the Driveability category.

---

## P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION

# 2.7L/3.5L

\*\*\* 5.7L

**P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and battery voltage greater than 10 volts.

- **Set Condition:**

If PCM detects that the secondary ignition burn time is incorrect, too short, or not present, an error is detected.  
One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT
(K17) COIL CONTROL NO.2 CIRCUIT OPEN
(K17) COIL CONTROL NO.2 CIRCUIT SHORTED TO GROUND
SPARK PLUG
COIL ON PLUG
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 9

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****2. SECONDARY SPARK**

**Note:** Inspect the ignition coil for damage, carbon tracking on the coil or a damaged spark plug insulator boot. If a problem is found, replace the ignition coil.

Turn the ignition off.

Remove the ignition coil.

Install a spark tester to the ignition coil.

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information. While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark generated?**

**Yes** >> Ensure the cylinder is operating properly. If OK, replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K343) ASD RELAY OUTPUT2 CIRCUIT**

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Coil on Plug harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the (K343) ASD Relay Output 2 circuit between the IPM and Coil harness connector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Note:** Stop All Actuations.

**P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****4. IGNITION COIL RESISTANCE**

Turn the ignition off.

**Note:** The following resistance measurement should be taken at 70°-80° F.

Measure the resistance of the Ignition Coil.

**Is the resistance between .55 to 1.5 ohms at 77°F (25°C) for the Ignition Coil being tested?**

**Yes** >> Go To 5

**No** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. IGNITION COIL**

Using a 12-volt test light connected to a 12-volt source, probe the (K17) Coil Control No.2 circuit.

Crank the engine for 5 seconds while observing the test light.

**What is the condition of the test light while cranking the engine?**

**Brightly blinking.**

Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**ON constantly.**

Go To 6

**OFF constantly.**

Go To 7

**P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****6. (K17) COIL CONTROL NO.2 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K17) Coil Control No.2 circuit in the Ignition Coil harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K17) Coil Control No.2 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**7. (K17) COIL CONTROL NO.2 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K17) Coil Control No.2 circuit from the Ignition Coil harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K17) Coil Control No.2 circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**9. Visual and Physical Inspection**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broken electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

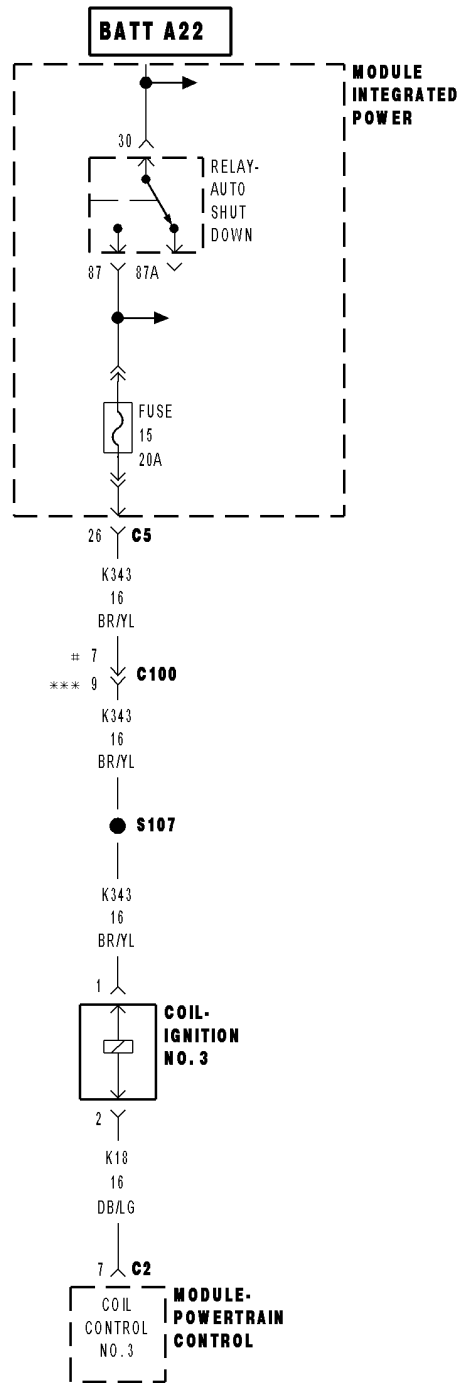

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Refer to the INTERMITTENT CONDITION symptom in the Driveability category.

---

## P2308-IGNITION COIL 3 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION

# 2.7L/3.5L

\*\*\* 5.7L

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2314-IGNITION COIL 5 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****9. Visual and Physical Inspection**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broken electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

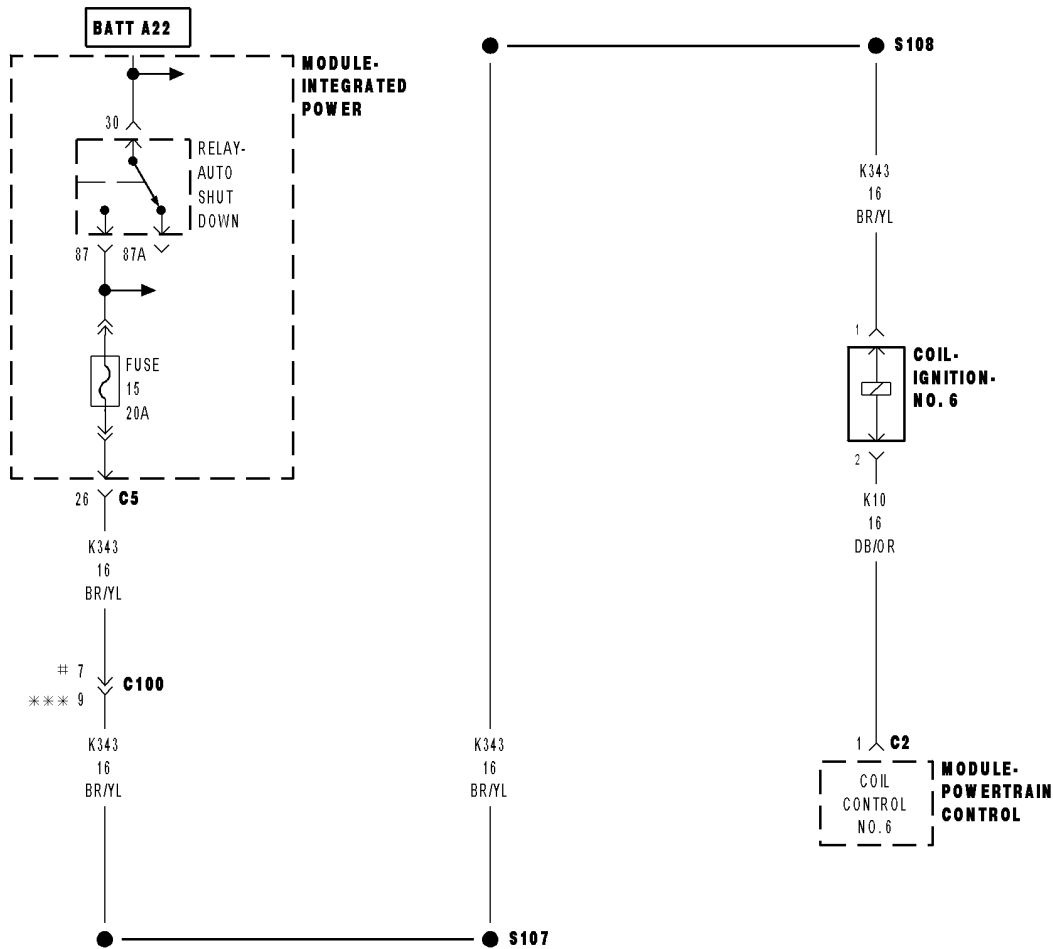

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Refer to the INTERMITTENT CONDITION symptom in the Driveability category.

---

## P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION

≠ 2.7L/3.5L  
\*\*\* 5.7L

**P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Engine running and battery voltage greater than 10 volts.

- **Set Condition:**

If PCM detects that the secondary ignition burn time is incorrect, too short, or not present, an error is detected.  
One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT
(K10) COIL CONTROL NO.6 CIRCUIT OPEN
(K10) COIL CONTROL NO.6 CIRCUIT SHORTED TO GROUND
SPARK PLUG
COIL ON PLUG
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 9

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****2. Secondary Spark**

**Note:** Inspect the ignition coil for damage, carbon tracking on the coil or a damaged spark plug insulator boot. If a problem is found, replace the ignition coil.

Turn the ignition off.

Remove the ignition coil.

Install a spark tester to the ignition coil.

**Note:** On the 2.7 and 3.5L engines, cylinders 1, 3 and 5, it is necessary to remove the upper intake to access the ignition coils. Once the ignition coil has been removed from the cylinder head, the intake must be reinstalled to be able to crank the engine. Move the ignition coil harness connector through the slots in the upper intake and then connect the coil to the harness connector. Secure the upper intake to the lower intake in accordance with the service information. While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark generated?**

**Yes** >> Ensure the cylinder is operating properly. If OK, replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K343) ASD RELAY OUTPUT2 CIRCUIT**

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Coil on Plug harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the (K343) ASD Relay Output 2 circuit between the IPM and Coil harness connector.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**Note:** Stop All Actuations.

**P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****4. IGNITION COIL RESISTANCE**

Turn the ignition off.

**Note:** The following resistance measurement should be taken at 70°-80° F.

Measure the resistance of the Ignition Coil.

**Is the resistance between .55 to 1.5 ohms at 77°F (25°C) for the Ignition Coil being tested?**

**Yes** >> Go To 5

**No** >> Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. IGNITION COIL**

Using a 12-volt test light connected to a 12-volt source, probe the (K10) Coil Control No.6 circuit.

Crank the engine for 5 seconds while observing the test light.

**What is the condition of the test light while cranking the engine?**

**Brightly blinking.**

Replace the Ignition Coil.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**ON constantly.**

Go To 6

**OFF constantly.**

Go To 7

**P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****6. (K10) COIL CONTROL NO.6 CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K10) Coil Control No.6 circuit in the Ignition Coil harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K10) Coil Control No.6 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**7. (K10) COIL CONTROL NO.6 CIRCUIT OPEN**

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K10) Coil Control No.6 circuit from the Ignition Coil harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K10) Coil Control No.6 circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****8. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

**9. Visual and Physical Inspection**

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broken electrode

**Note:** Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.

**Were any of the above conditions present?**

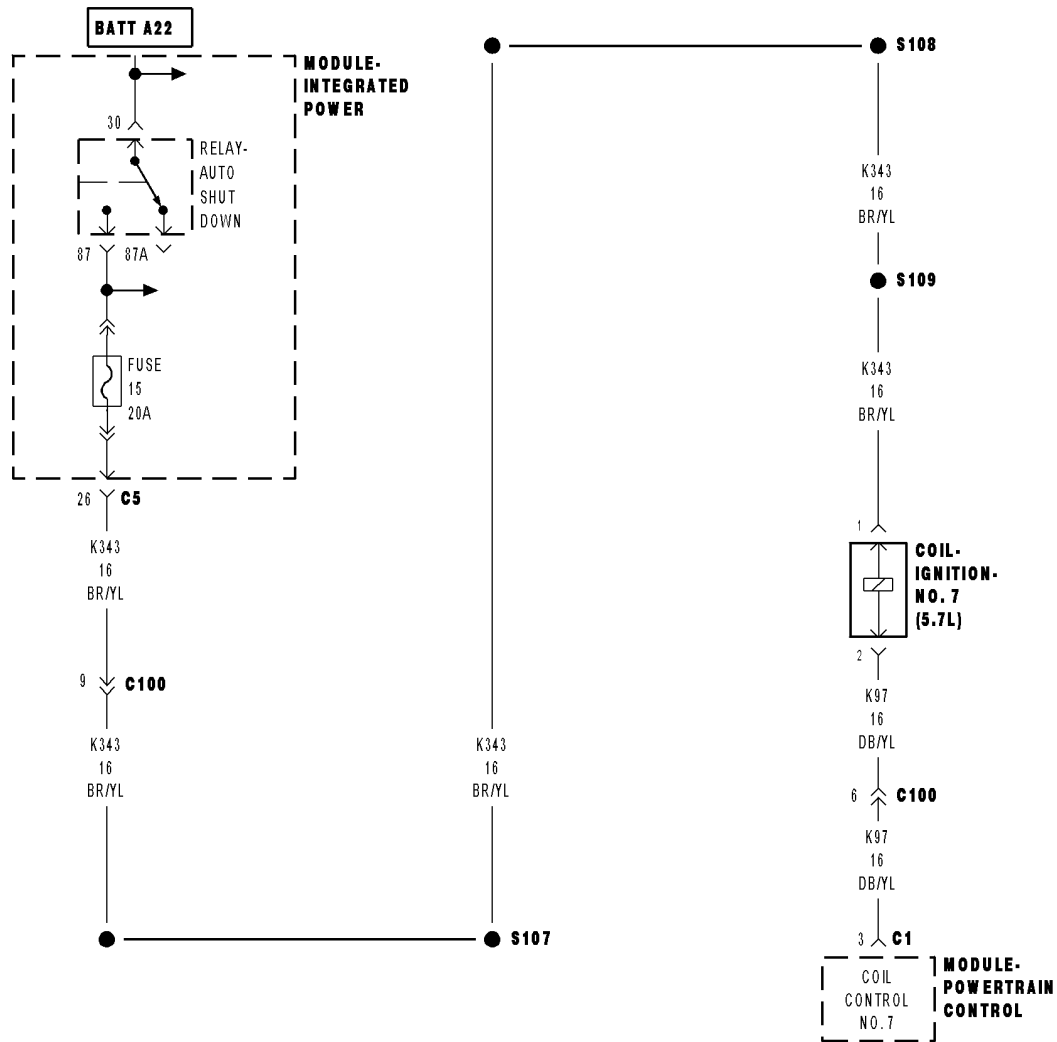

**Yes** >> Replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Refer to the INTERMITTENT CONDITION symptom in the Driveability category.

---

## P2320-IGNITION COIL 7 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION

**P2320-IGNITION COIL 7 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Engine running and battery voltage greater than 10 volts.
- **Set Condition:**  
If PCM detects that the secondary ignition burn time is incorrect, too short, or not present, an error is detected.  
One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
(K343) ASD RELAY OUTPUT 2 CIRCUIT (K97) COIL CONTROL NO.7 CIRCUIT OPEN (K97) COIL CONTROL NO.7 CIRCUIT SHORTED TO GROUND SPARK PLUG COIL ON PLUG PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 9

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2320-IGNITION COIL 7 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION (CONTINUED)****2. Secondary Spark**

**Note:** Inspect the ignition coil for damage, carbon tracking on the coil or a damaged spark plug insulator boot. If a problem is found, replace the ignition coil.

Turn the ignition off.

Remove the ignition coil.

Install a spark tester to the ignition coil.

While cranking the engine observe the spark coming from the spark tester.

**Note:** A crisp blue spark that is able to jump the gap of the spark tester should be generated.

**Is good spark generated?**

**Yes** >> Ensure the cylinder is operating properly. If OK, replace the Spark Plug.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (K343) ASD RELAY OUTPUT2 CIRCUIT**

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (K343) ASD Relay Output 2 circuit in the Coil on Plug harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the (K343) ASD Relay Output 2 circuit between the IPM and Coil harness connector.

## P2503-CHARGING SYSTEM OUTPUT LOW

**P2503-CHARGING SYSTEM OUTPUT LOW (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

The engine running. The engine speed greater than 1157 RPM.

- **Set Condition:**

The battery sensed voltage is 1 volt below the charging goal for 13.47 seconds. The PCM senses the battery voltage turns off the field driver and senses the battery voltage again. If the voltages are the same, the code is set. One Trip Fault. Three good trips to turn off the MIL.

Possible Causes
EXCESSIVE RESISTANCE IN THE BATTERY POSITIVE CIRCUIT EXCESSIVE RESISTANCE IN THE CASE GROUND (K20) GEN FIELD CONTROL CIRCUIT SHORTED TO VOLTAGE (K20) GEN FIELD CONTROL CIRCUIT OPEN (K20) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND (Z904) GEN GROUND CIRCUIT OPEN GENERATOR PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Inspect the vehicle for aftermarket accessories that may exceed the Generator System output.

Ignition on, engine not running.

**Note:** The battery must be fully charged.

**Note:** The Generator belt tension and condition must be checked before continuing.

With a scan tool, read DTCs.

With a scan tool, erase DTCs.

Start the engine.

Allow the idle to stabilize.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2503-CHARGING SYSTEM OUTPUT LOW (CONTINUED)****2. FUSED B+ CIRCUIT HIGH RESISTANCE**

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Ignition on, engine not running.

**Note:** Make sure all wires are clear of the engine's moving parts.

Measure the voltage between the Generator B+ Output Terminal and the Battery+ Post.

Start the engine.

**Is the voltage above 0.4 of a volt?**

**Yes** >> Repair the excessive resistance in the battery positive circuit between the Generator and Battery.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. EXCESSIVE RESISTANCE IN THE CASE GROUND**

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Start the engine.

Warm the engine to operating temperature.

**Note:** Make sure all wires are clear of the engine's moving parts.

Measure the voltage between the Generator Case and Battery ground post.

**Is the voltage above 0.1 of a volt?**

**Yes** >> Repair the excessive resistance in the Generator Case Ground.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

**4. GENERATOR OPERATION**

Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump across the Generator Field harness connector.

Ignition on, engine not running.

With a scan tool, actuate the Generator Field Driver.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**P2503-CHARGING SYSTEM OUTPUT LOW (CONTINUED)****5. (K20) GEN FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Ignition on, engine not running.

Measure the voltage on the (K20) Gen Field Control circuit in the Generator Field harness connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K20) Gen Field Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**6. (K20) FIELD CONTROL CIRCUIT OPEN**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K20) Gen Field Control circuit from the Generator Field harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K20) Gen Field Control circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P2503-CHARGING SYSTEM OUTPUT LOW (CONTINUED)****7. (K20) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND**

Measure the resistance between ground and the (K20) Gen Field Control circuit in the Generator Field harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K20) Gen Field Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. (Z904) GROUND CIRCUIT OPEN**

Using a 12-volt test light connected to battery voltage, probe the (Z904) Ground circuit in the Generator Field harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 9

**No** >> Repair the open in the (Z904) Generator Ground circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**9. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P3400-MDS RATIONALITY BANK 1

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

### Theory of Operation

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
O2 sensor readings on Bank 1 side indicate a lean condition while in 4 cylinder mode.

Possible Causes
INSUFFICIENT OIL PRESSURE ACTING ON THE LIFTER LOCKING PINS
OIL PASSAGES RESTRICTED
LIFTER
MDS SOLENOID

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note: Diagnose any Oil Pressure DTCs before continuing.**

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3400-MDS RATIONALITY BANK 1 (CONTINUED)****2. MDS SOLENOID 1**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 1.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 3

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 1. If the passages are not clogged with debris, replace the MDS Solenoid 1.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. MDS SOLENOID 7**

With the scan tool actuate the MDS Solenoid 7.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 4

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are restricted, clean the passages and replace the MDS Solenoid 7. If the passages are not clogged with debris, replace the MDS Solenoid 7.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3400-MDS RATIONALITY BANK 1 (CONTINUED)****4. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 1 of the engine block.

Remove the Bank 1 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

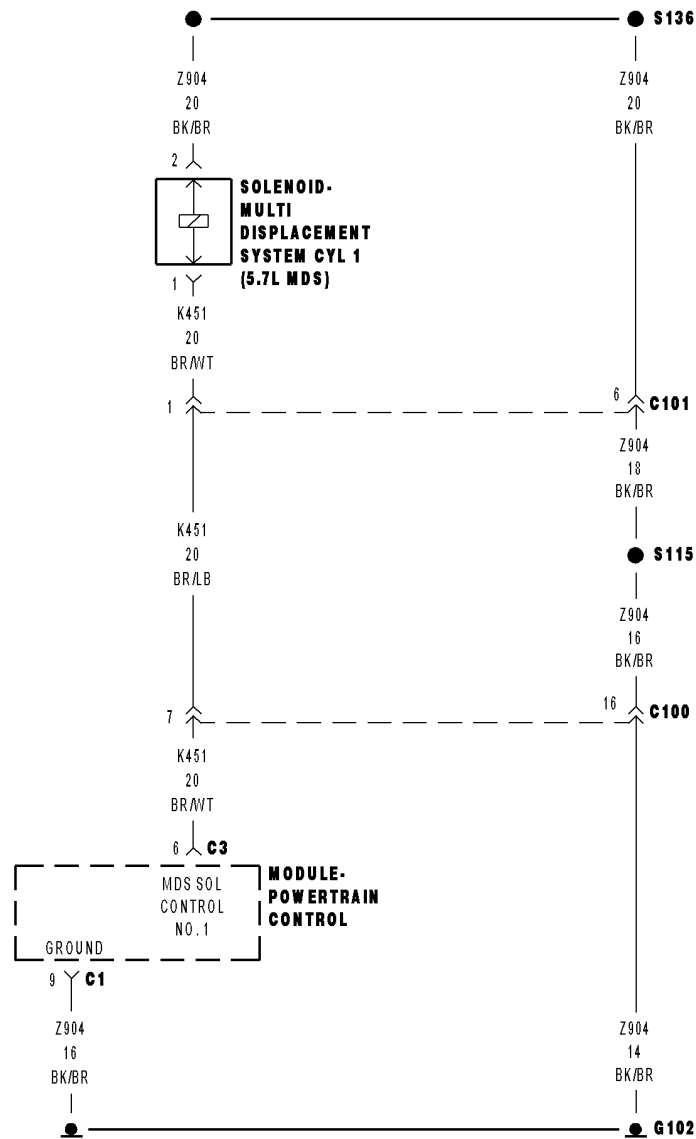

**No** >> Replace both sets of lifters if no other possible causes remain.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

---

## P3401-MDS SOLENOID 1 CIRCUIT

**P3401-MDS SOLENOID 1 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
When the PCM recognizes a problem with the Solenoid Control circuit.

Possible Causes
(K451) MDS SOLENOID NO.1 CONTROL SHORT TO BATTERY VOLTAGE
(K451) MDS SOLENOID NO.1 CONTROL SHORT TO GROUND
(K451) MDS SOLENOID NO.1 CONTROL OPEN
(Z904) GROUND CIRCUIT OPEN
MDS SOLENOID NO.1
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3401-MDS SOLENOID 1 CIRCUIT (CONTINUED)****2. MDS SOLENOID NO.1**

Turn the ignition off.

Gain access to the MDS Solenoid No.1..

Disconnect the MDS Solenoid No.1 harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to the (Z904) Ground circuit, probe the (K451) MDS Solenoid No.1 Control circuit.

With a scan tool, actuate the MDS Solenoid 1.

**Does the 12-volt test light flash on and off?**

**Yes** >> Replace the MDS Solenoid No.1.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (Z904) GROUND CIRCUIT OPEN**

Turn the ignition off.

Using a 12-volt test light connected to the 12-volts, probe the (Z904) Ground circuit in the MDS Solenoid No.1 harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open in the (Z904) Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3401-MDS SOLENOID 1 CIRCUIT (CONTINUED)****4. (K451) MDS SOLENOID NO.1 CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Disconnect the PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K451) MDS Solenoid No.1 Control circuit in the MDS Solenoid No.1 connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K451) MDS Solenoid No.1 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K451) MDS SOLENOID NO.1 CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Measure the resistance between ground and the (K451) MDS Solenoid No.1 Control circuit in the MDS Solenoid No.1 harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K451) MDS Solenoid No.1 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P3401-MDS SOLENOID 1 CIRCUIT (CONTINUED)****6. (K451) MDS SOLENOID NO.1 CONTROL CIRCUIT OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K451) MDS Solenoid No.1 Control circuit from the MDS Solenoid No.1 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K451) MDS Solenoid No.1 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

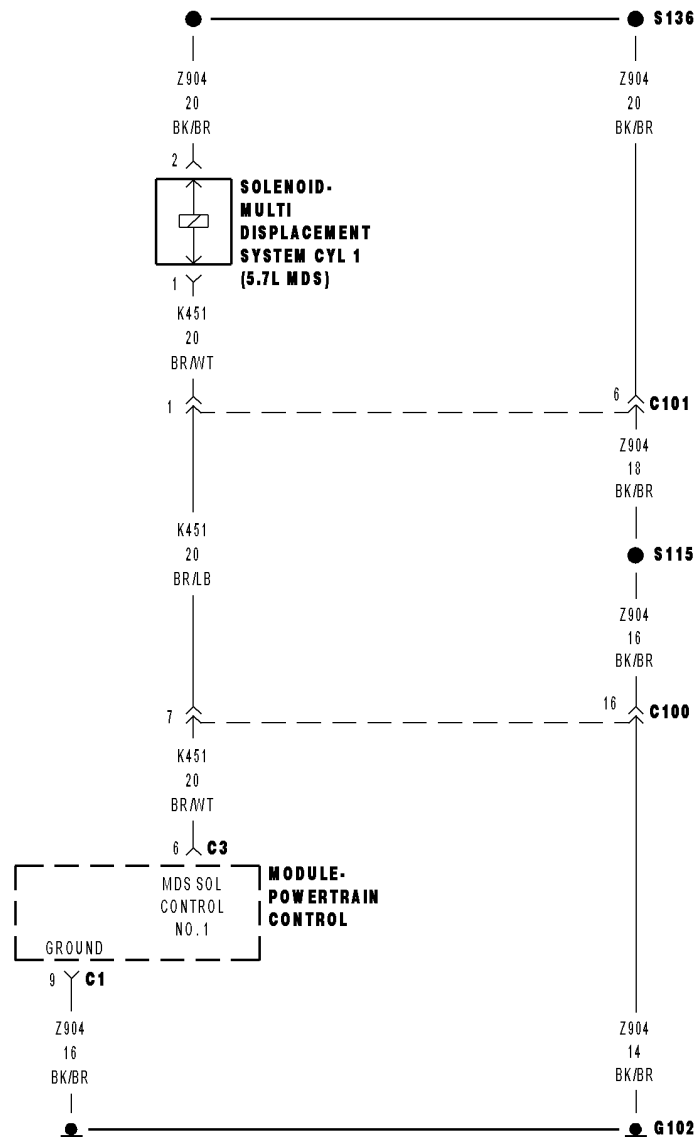

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P3402-CYLINDER 1 DEACTIVATION CONTROL PERFORMANCE

**P3402-CYLINDER 1 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
The MDS fails to disengage for cylinder 1.

Possible Causes
(K451) MDS SOLENOID NO.1 CONTROL SHORT TO VOLTAGE OIL PASSAGES RESTRICTED LIFTER MDS SOLENOID NO.1 PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3402-CYLINDER 1 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)****2. MDS SOLENOID NO.1 CONTROL CIRCUIT**

Turn the ignition off.

Disconnect the MDS Solenoid No.1 harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to ground, probe the (K451) MDS Solenoid No.1 Control circuit.

**Does the 12-volt test light illuminate?**

**Yes** >> Go To 3

**No** >> Go To 4

**3. (K451) MDS SOLENOID NO.1 CONTROL CIRCUIT SHORTED TO VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Turn the ignition on.

Measure the voltage on (K451) MDS Solenoid No.1 Control circuit in the MDS Solenoid No.1 harness connector.

**Is voltage present?**

**Yes** >> Repair the short to voltage in the (K451) MDS Solenoid No.1 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >>

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3402-CYLINDER 1 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)****4. MDS SOLENOID 1**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 1.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 5

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 1. If the passages are not clogged with debris, replace the MDS Solenoid 1.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 1 of the engine block.

Remove the Bank 1 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace both sets of lifters if no other possible causes remain.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3425-MDS SOLENOID 4 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

Disconnect the PCM harness connectors.

Turn the ignition on.

Measure the voltage of the (K453) MDS Solenoid No.6 Control circuit in the MDS Solenoid No.6 harness connector.

**Is voltage present?**

**Yes** >> Repair the short to voltage in the (K453) MDS Solenoid No.6 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >>

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3442-CYLINDER 6 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)****4. MDS SOLENOID 6**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 6.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 5

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 6. If the passages are not clogged with debris, replace the MDS Solenoid 6.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 2 of the engine block.

Remove the Bank 2 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

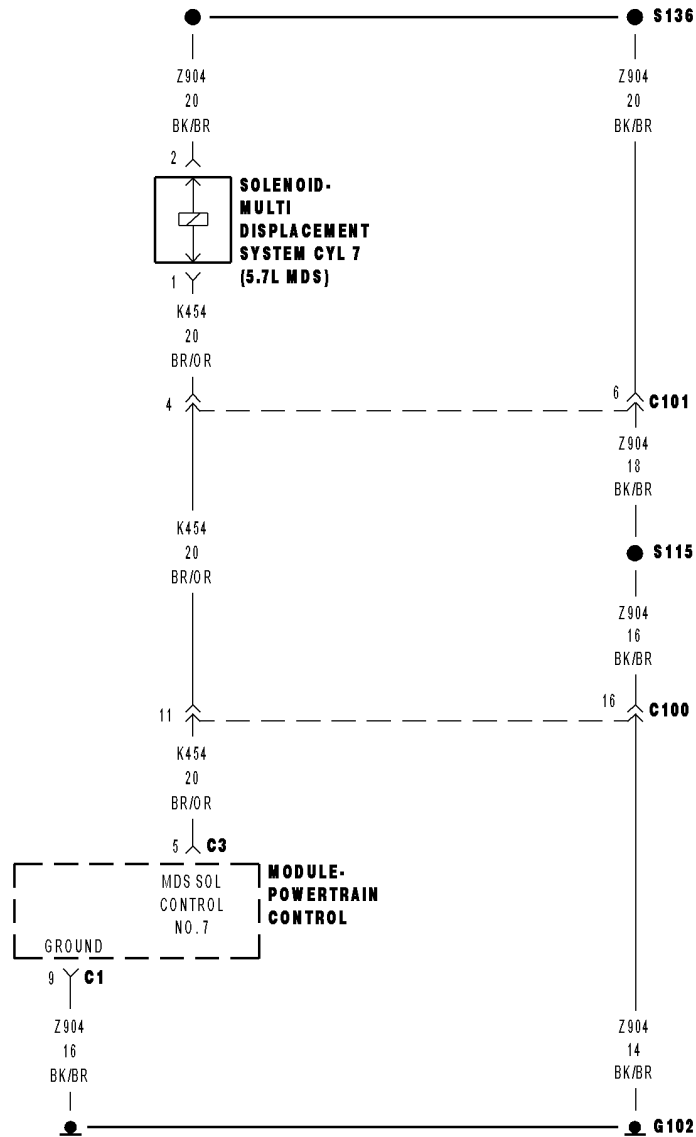

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace both sets of lifters if no other possible causes remain.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P3449-MDS SOLENOID 7 CIRCUIT

**P3449-MDS SOLENOID 7 CIRCUIT (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
When the PCM recognizes a problem with the Solenoid Control circuit.

**Possible Causes**

(K454) MDS SOLENOID NO.7 CONTROL SHORT TO BATTERY VOLTAGE  
(K454) MDS SOLENOID NO.7 CONTROL SHORT TO GROUND  
(K454) MDS SOLENOID NO.7 CONTROL OPEN  
(Z904) GROUND CIRCUIT OPEN  
MDS SOLENOID NO.7  
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3449-MDS SOLENOID 7 CIRCUIT (CONTINUED)****2. MDS SOLENOID NO.7**

Turn the ignition off.

Gain access to the MDS Solenoid No.7.

Disconnect the MDS Solenoid No.7 harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to the (Z904) Ground circuit, probe the (K454) MDS Solenoid No.7 Control circuit.

With a scan tool, actuate the MDS Solenoid No.7.

**Does the 12-volt test light flash on and off?**

**Yes** >> Replace the MDS Solenoid No.7.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. (Z904) GROUND CIRCUIT OPEN**

Turn the ignition off.

Using a 12-volt test light connected to the 12-volts, probe the (Z904) Ground circuit in the MDS Solenoid No.7 harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open in the (Z904) Ground circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3449-MDS SOLENOID 7 CIRCUIT (CONTINUED)****4. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE**

Disconnect the PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K454) MDS Solenoid No.7 Control circuit in the MDS Solenoid No.7 harness connector.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

**5. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Measure the resistance between ground and the (K454) MDS Solenoid No.7 Control circuit in the MDS Solenoid No.7 harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 6

**P3449-MDS SOLENOID 7 CIRCUIT (CONTINUED)****6. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT OPEN**

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Measure the resistance of the (K454) MDS Solenoid No.7 Control circuit from the MDS Solenoid No.7 harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**7. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

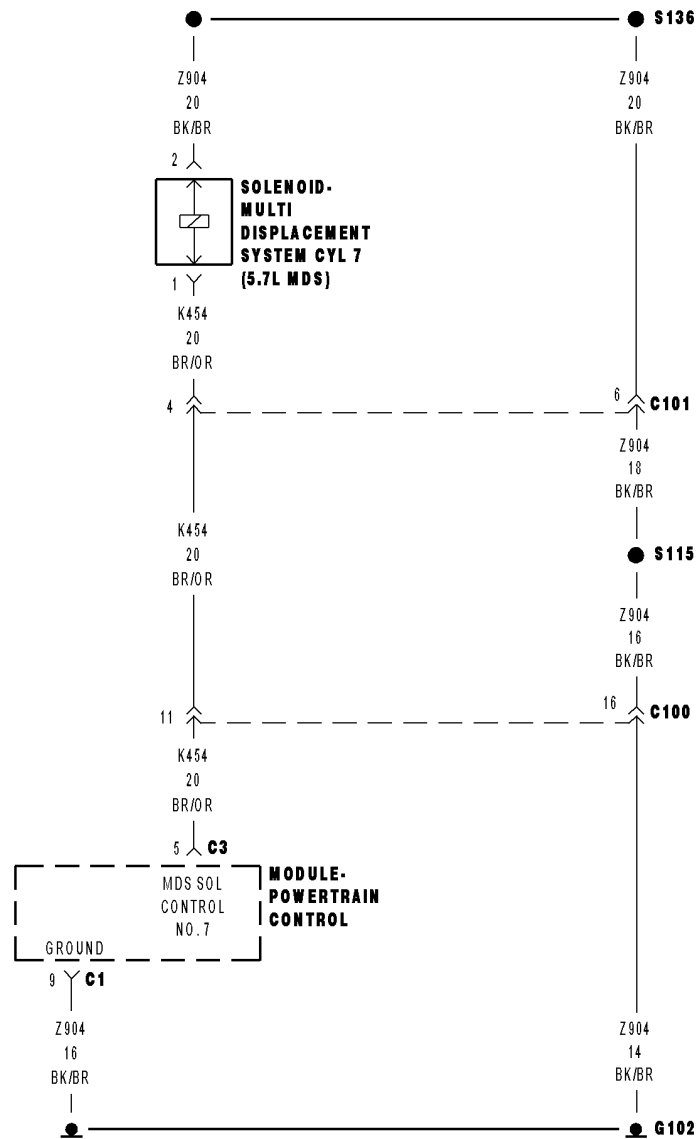

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## P3450—CYLINDER 7 DEACTIVATION CONTROL PERFORMANCE

**P3450-CYLINDER 7 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

**Theory of Operation**

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
The MDS fails to disengage for cylinder 7.

Possible Causes
(K451) MDS SOLENOID NO.1 CONTROL SHORT TO VOLTAGE OIL PASSAGES RESTRICTED LIFTER MDS SOLENOID NO.1 PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
 Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3450-CYLINDER 7 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)****2. MDS SOLENOID NO.7 CONTROL CIRCUIT**

Turn the ignition off.

Disconnect the MDS Solenoid No.7 harness connector.

Ignition on, engine not running.

Turn off all accessories.

Using a 12-volt test light connected to ground, probe the (K454) MDS Solenoid No.7 Control circuit.

**Does the 12-volt test light illuminate?**

**Yes** >> Go To 3

**No** >> Go To 4

**3. (K454) MDS SOLENOID NO.7 CONTROL CIRCUIT SHORTED TO VOLTAGE**

Turn the ignition off.

Disconnect the PCM harness connectors.

Turn the ignition on.

Measure the voltage of the (K454) MDS Solenoid No.7 Control circuit in the MDS Solenoid No.7 harness connector.

**Is voltage present?**

**Yes** >> Repair the short to voltage in the (K454) MDS Solenoid No.7 Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >>

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3450-CYLINDER 7 DEACTIVATION CONTROL PERFORMANCE (CONTINUED)****4. MDS SOLENOID 7**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Turn the ignition on.

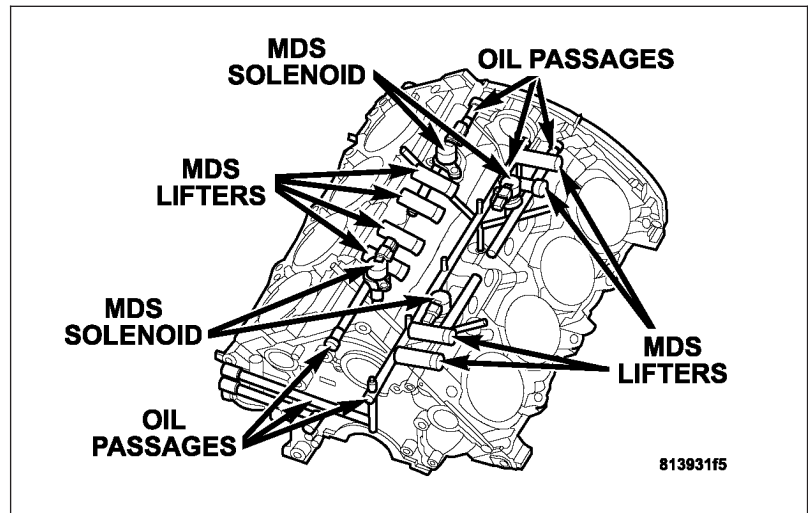

With the scan tool actuate the MDS Solenoid 7.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 5

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 7. If the passages are not clogged with debris, replace the MDS Solenoid 7.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**5. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 1 of the engine block.

Remove the Bank 1 Cylinder Head per Service Information.

Remove the Lifters from the left engine bank.

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace both sets of lifters if no other possible causes remain.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

P3497-MDS RATIONALITY BANK 2

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Theory of Operation

When all criteria has been met, power is supplied to each MDS Solenoid when the engine is making a transition from 8 cylinder mode to 4 cylinder mode. By actuating the solenoid, oil pressure is raised to the pair of lifters that coincide with each particular solenoid. The oil pressure pushes in the locking pins that allows the lifter to collapse, decoupling the valves and camshaft.

- **When Monitored:**  
Transition from 8 to 4 cylinder mode.
- **Set Condition:**  
O2 sensor readings on Bank 2 side indicate a lean condition while in 4 cylinder mode.

Possible Causes
INSUFFICIENT OIL PRESSURE ACTING ON THE LIFTER LOCKING PINS
OIL PASSAGES RESTRICTED
LIFTER
MDS SOLENOID

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Note:** Diagnose any Oil Pressure DTCs before continuing.

- Is the DTC active at this time?
- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3497-MDS RATIONALITY BANK 2 (CONTINUED)****2. MDS SOLENOID 4**

Turn the ignition off.

Remove the Intake Manifold per Service Information.

Turn the ignition on.

With the scan tool actuate the MDS Solenoid 4.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 3

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are clogged, clean the passages and replace the MDS Solenoid 4. If the passages are not clogged with debris, replace the MDS Solenoid 4.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**3. MDS SOLENOID 6**

With the scan tool actuate the MDS Solenoid 6.

**Can you feel and hear the Solenoid Actuating?**

**Yes** >> Go To 4

**No** >> Remove the Solenoid and check for any debris that may be blocking the oil passages to the Solenoid. If the passages are restricted, clean the passages and replace the MDS Solenoid 6. If the passages are unable to be cleaned out, replacing the engine block may be necessary. If the passages are not clogged with debris, replace the MDS Solenoid 6.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**P3497-MDS RATIONALITY BANK 2 (CONTINUED)****4. OIL PASSAGES RESTRICTED**

Turn the ignition off.

Remove both Solenoids on Bank 2 of the engine block.

Remove the Bank 2 Cylinder Head per Service Information.

Remove the each pair of lifters for Cylinders 4 and 6.

Inspect the oil passages to the Solenoids and from the Solenoids to the lifters.

**Are the passages blocked?**

**Yes** >> Clean the oil passages as necessary. If the entire engine is restricted disassembly of the entire engine block may be necessary.

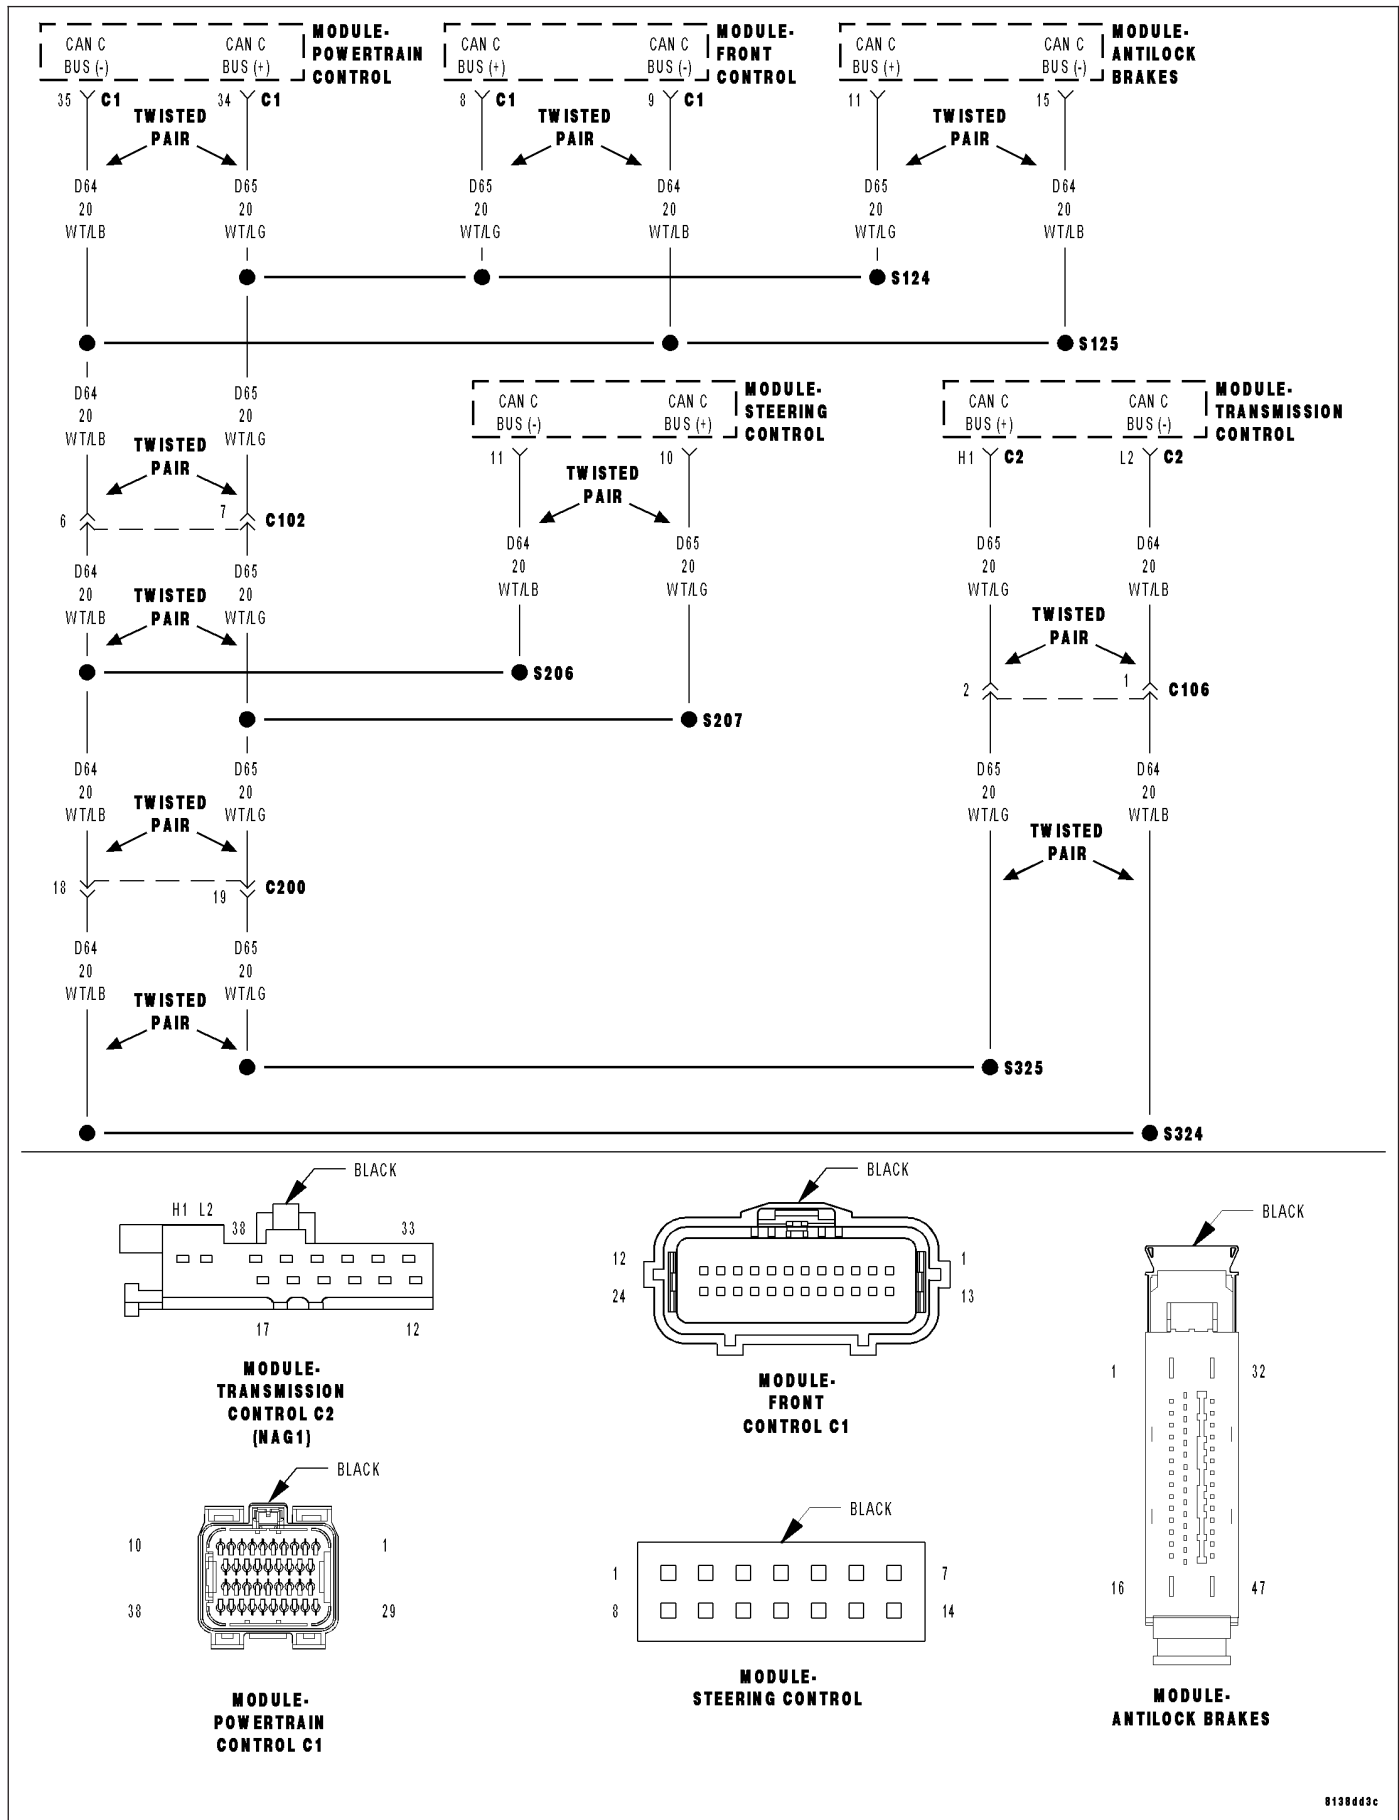

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace both sets of lifters if no other possible causes remain.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

# U0001-CAN C BUS

U0001-CAN C BUS (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.
- **Set Condition:**  
The PCM loses communication over the CAN C Bus circuit. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.

Diagnostic Test

1. ACTIVE DTC

Ignition on, engine not running.  
With a scan tool, read FCM DTCs.

- Is the DTC active at this time?
- Yes**    >> Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.
- No**    >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.

## U0101-LOST COMMUNICATION WITH TCM

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.
- **Set Condition:**  
The PCM doesn't receive a Bus Message from the Transmission Control Module for 7 consecutive seconds. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION PCM

Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.

### Diagnostic Test

#### 1. ACTIVE DTC

Ignition on, engine not running.

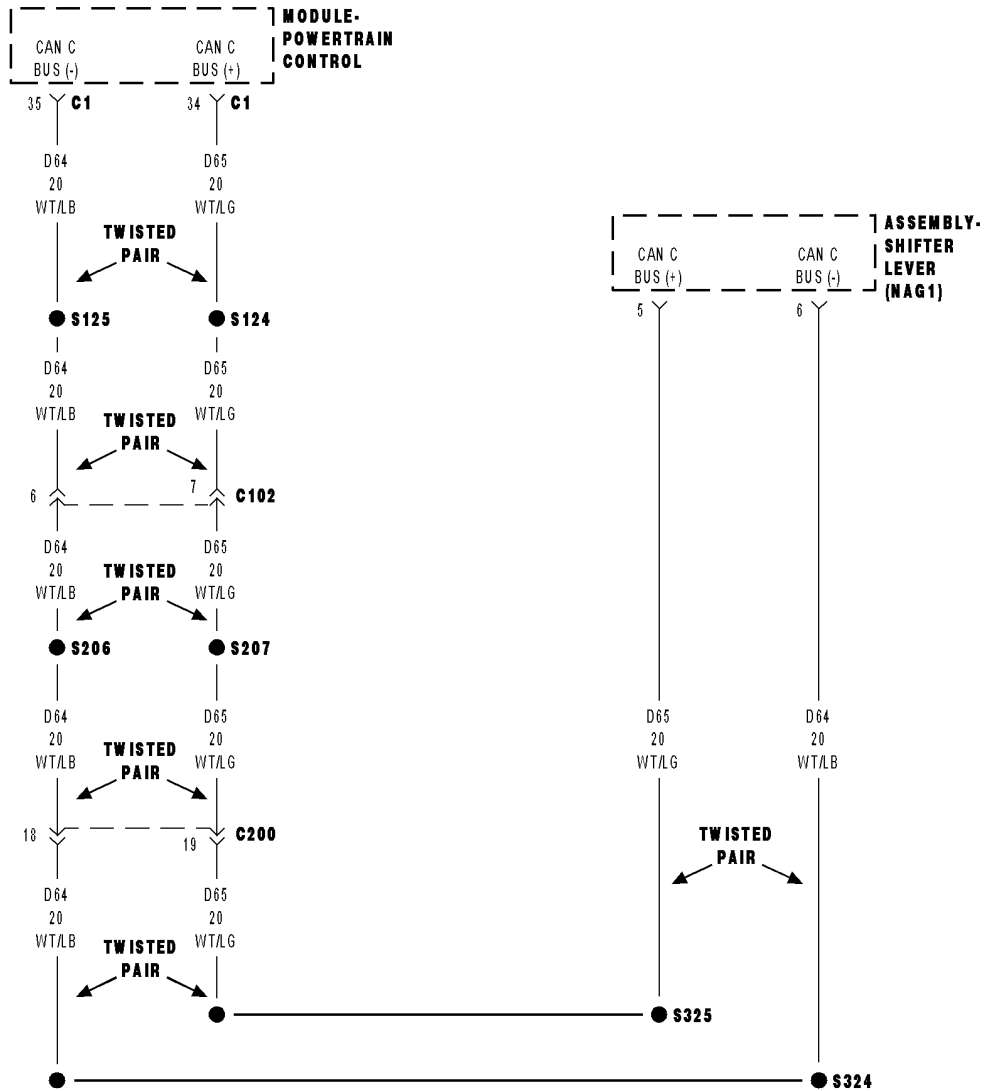

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

- Yes** >> Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 3.

## U0103-LOST COMMUNICATION WITH ELECTRIC GEAR SHIFT MODULE

**ASSEMBLY-SHIFTER LEVER (NAG1)**

**MODULE-POWERTRAIN CONTROL C1**

**U0103-LOST COMMUNICATION WITH ELECTRIC GEAR SHIFT MODULE (CONTINUED)**

For a complete wiring diagram Refer to **Section 8W**.

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.

- **Set Condition:**

The PCM doesn't receive a Electric Gear Shift Module message over the CAN C circuit. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION
ELECTRIC GEAR SHIFT MODULE
PCM

Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

- Yes** >> Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.
- No** >> Refer to the **INTERMITTENT CONDITION** Diagnostic Procedure.  
Perform (NGC) **POWERTRAIN VERIFICATION TEST VER - 5**.

U0121-LOST COMMUNICATION WITH ANTI-LOCK BRAKE MODULE

**U0121-LOST COMMUNICATION WITH ANTI-LOCK BRAKE MODULE (CONTINUED)**

For a complete wiring diagram Refer to **Section 8W**.

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.

- **Set Condition:**

The PCM doesn't receive an ABS message over the CAN C circuit for 7 consecutive seconds. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION ABS MODULE PCM

Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

**Yes** >> Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

**No** >> Refer to the **INTERMITTENT CONDITION** Diagnostic Procedure.  
Perform (NGC) **POWERTRAIN VERIFICATION TEST VER - 5**.

## U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE

**U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE (CONTINUED)**

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts.

- **Set Condition:**

The PCM doesn't receive a FCM message over the CAN C circuit for 7 consecutive seconds. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION FRONT CONTROL MODULE PCM

**Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

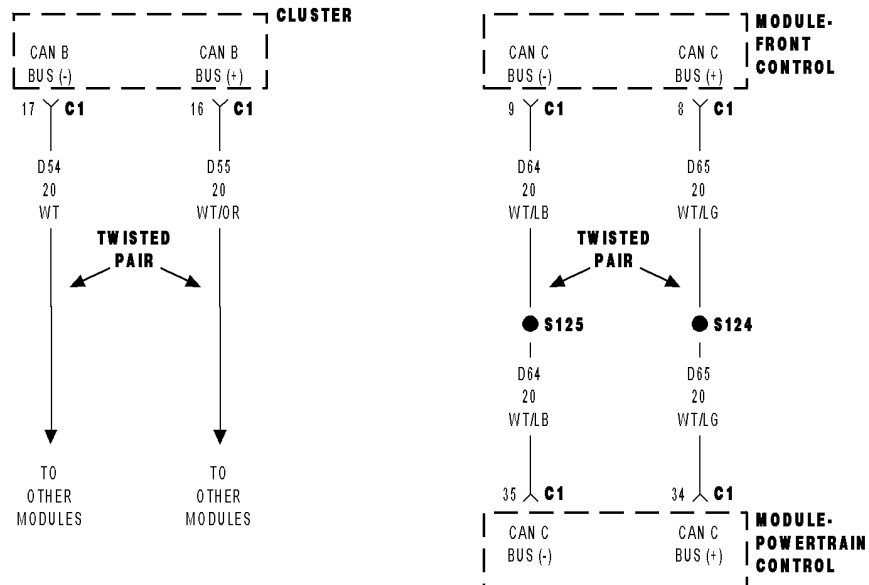

**Yes** >> Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

## U0155-LOST COMMUNICATION WITH CLUSTER/CCN

**MODULE-  
POWERTRAIN  
CONTROL C1****CLUSTER C1****MODULE-  
FRONT  
CONTROL C1**

**U0155-LOST COMMUNICATION WITH CLUSTER/CCN (CONTINUED)**

For a complete wiring diagram Refer to **Section 8W**.

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.

- **Set Condition:**

The PCM doesn't receive a Cluster message over the CAN C circuit. The circuit is continuously monitored.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION CLUSTER/CCN PCM

Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

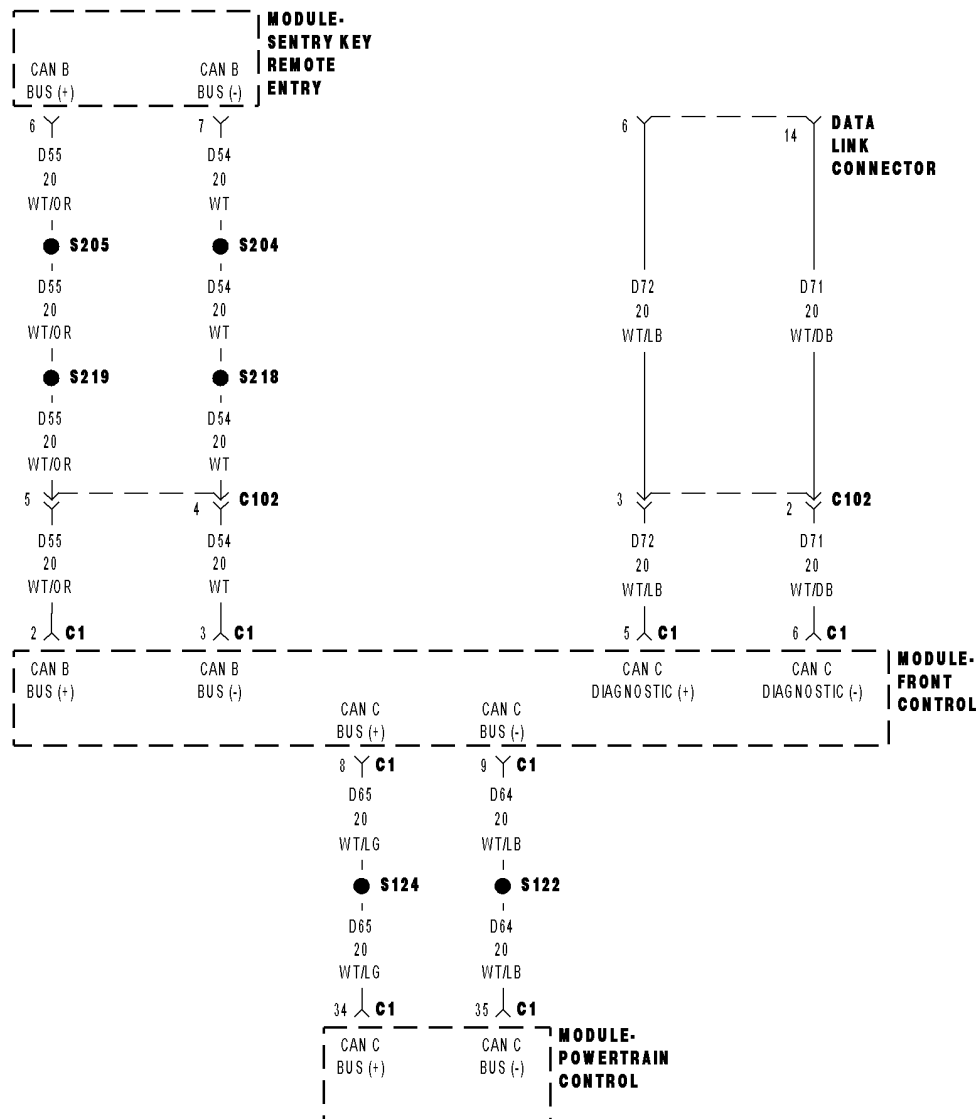

**Yes** >> Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

**No** >> Refer to the **INTERMITTENT CONDITION** Diagnostic Procedure.

Perform (NGC) **POWERTRAIN VERIFICATION TEST VER - 5**.

# U0168-LOST COMMUNICATION WITH VEHICLE SECURITY CONTROL MODULE (SKREEM/WCM)

**MODULE-FRONT CONTROL C1**

**MODULE-POWERTRAIN CONTROL C1**

**MODULE-SENTRY KEY REMOTE ENTRY**

**U0168-LOST COMMUNICATION WITH VEHICLE SECURITY CONTROL MODULE  
(SKREEM/WCM) (CONTINUED)**

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.

- **Set Condition:**

Bus messages not received from the Sentry Key Remote Entry Module (WCM) for approximately 2 to 5 seconds.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION SKREEM (WCW) PCM

Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

**Yes** >> Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for diagnostic procedures and for further possible causes.

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

The diagram illustrates the CAN C network architecture. It shows four main modules: Module-Powertrain Control, Module-Steering Control, Data Link Connector, and Module-Front Control. The network is composed of twisted pairs (WT/LB, WT/LG, WT/DB) and signal relays (S122, S124, S206, S207). The connections are as follows:

- Module-Powertrain Control:** CAN C BUS (-) (35) and CAN C BUS (+) (34) are connected to twisted pairs D64 (20) WT/LB and D65 (20) WT/LG. These are connected to signal relays S122 and S124.
- Module-Steering Control:** CAN C BUS (-) (11) and CAN C BUS (+) (10) are connected to twisted pairs D64 (20) WT/LB and D65 (20) WT/LG. These are connected to signal relays S206 and S207.
- Data Link Connector:** Twisted pairs D72 (20) WT/LB and D71 (20) WT/DB are connected to twisted pairs D72 (20) WT/LB and D71 (20) WT/DB. These are connected to signal relays S122 and S124.
- Module-Front Control:** CAN C BUS (+) (8), CAN C BUS (-) (9), CAN C DIAGNOSTIC (+) (5), and CAN C DIAGNOSTIC (-) (6) are connected to twisted pairs D65 (20) WT/LG, D64 (20) WT/LB, D72 (20) WT/LB, and D71 (20) WT/DB. These are connected to signal relays S122 and S124.

The diagram also shows the physical layout of the connectors and the location of the signal relays (S122, S124, S206, S207) within the vehicle's wiring harness.

**U110A-LOST COMMUNICATION WITH SCCM - CAN - C (CONTINUED)**

For a complete wiring diagram Refer to **Section 8W**.

- **When Monitored:**

Ignition run time is greater than 1 second. Battery voltage between 9 and 16 volts. Engine run time greater than 3 seconds.

- **Set Condition:**

Bus messages not received from the SCCM for approximately 2 to 5 seconds.

Possible Causes
CAN C BUS FAILURE OPEN OR SHORTED CONDITION
SCCM
PCM

Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With a scan tool, read PCM DTCs.

**Is the DTC active at this time?**

**Yes** >> Refer to **8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING** for diagnostic procedures and for further possible causes.

**No** >> Refer to the **INTERMITTENT CONDITION** Diagnostic Procedure.

Perform (NGC) **POWERTRAIN VERIFICATION TEST VER - 5**.

[illegible]

**U110C-NO FUEL LEVEL BUS MESSAGE RECEIVED (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

When the PCM does not receive a fuel level signal from the FCM over the CAN C circuit. The circuit is constantly monitored.

Possible Causes
CAN C BUS CIRCUIT OPEN OR SHORTED
FRONT CONTROL MODULE
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Theory of Operation

The fuel level signal is a direct input to the Cluster. The fuel level signal is sent to the FCM over the CAN B bus circuit. The NGC receives the fuel level signal from the FCM over the CAN C bus circuit.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

### 2. U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE ALSO ACTIVE

With the scan tool read DTCs.

**Is the U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE also set?**

**Yes** >> Follow the diagnostics for U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

## U110E-LOST AMBIENT TEMPERATURE MESSAGE

**U110E-LOST AMBIENT TEMPERATURE MESSAGE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

The PCM doesn't receive the ambient temperature signal over the CAN C bus from the FCM. The circuit is continuously monitored.

Possible Causes
CAN C BUS CIRCUIT OPEN OR SHORTED
FRONT CONTROL MODULE
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ambient temperature sensor signal is a direct input to the FCM. The FCM sends the PCM the ambient temperature signal over the CAN C bus.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

### 2. U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE ALSO ACTIVE

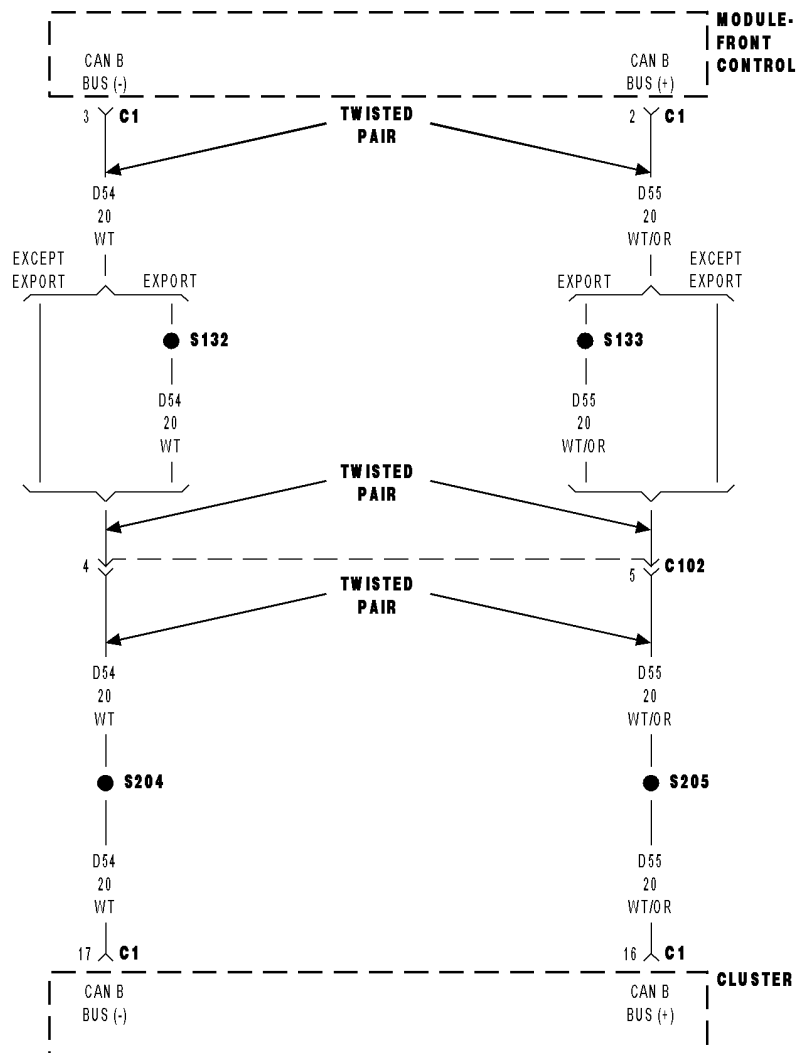

With the scan tool read DTCs.

**Is the U0141-NO BUS MESSAGE RECEIVED FROM THE FCM also set?**

**Yes** >> Follow the diagnostics for U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

## U110F-LOST FUEL VOLUME MESSAGE

**U110F-LOST FUEL VOLUME MESSAGE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
When the PCM does not receive a fuel volume signal from the FCM over the CAN C circuit. The circuit is constantly monitored.

Possible Causes
CAN C BUS CIRCUIT OPEN OR SHORTED FRONT CONTROL MODULE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Theory of Operation**

The fuel level signal is a direct input to the Cluster. The fuel level signal is sent to the FCM over the CAN B bus circuit. The NGC receives the fuel level signal from the FCM over the CAN C bus circuit.

**Diagnostic Test****1. ACTIVE DTC**

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**2. U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE ALSO ACTIVE**

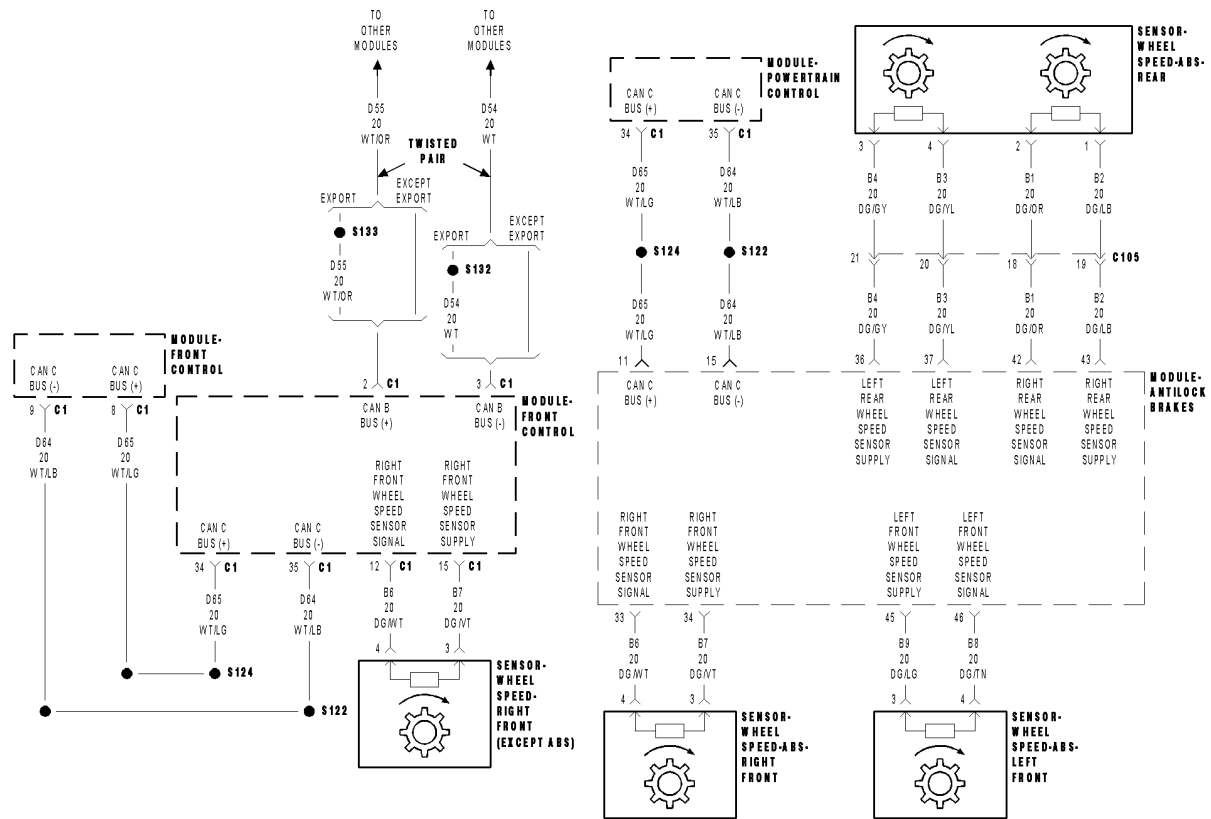

With the scan tool read DTCs.

**Is the U0141-NO BUS MESSAGE RECEIVED FROM THE FCM also set?**

**Yes** >> Follow the diagnostics for U0141-LOST COMMUNICATION WITH FRONT CONTROL MODULE  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

## U1110-LOST VEHICLE SPEED MESSAGE

**U1110-LOST VEHICLE SPEED MESSAGE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

The PCM doesn't receive a vehicle speed signal from the Anti-lock brake Module or FCM (NON-ABS) over the CAN C bus.

Possible Causes
CAN C BUS CIRCUIT OPEN OR SHORTED
ANTI-LOCK BRAKE MODULE
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Theory of Operation

The PCM receives the vehicle speed signal over the CAN C bus from the Anti-lock Brake Module or FCM (NON-ABS).

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**U1110-LOST VEHICLE SPEED MESSAGE (CONTINUED)**

**2. U0121-LOST COMMUNICATION WITH ABS MODULE/P0141-LOST COMMUNICATION WITH FCM ALSO SET**

**Note:** If the vehicle is not equipped with ABS the VSS signal will come from the FCM.

With the scan tool, read the appropriate module for DTCs.

**Is the U0121-LOST COMMUNICATION WITH ABS MODULE/P0141-Lost Communicate With FCM also set?**

**Yes** >> Perform the appropriate diagnostic test.

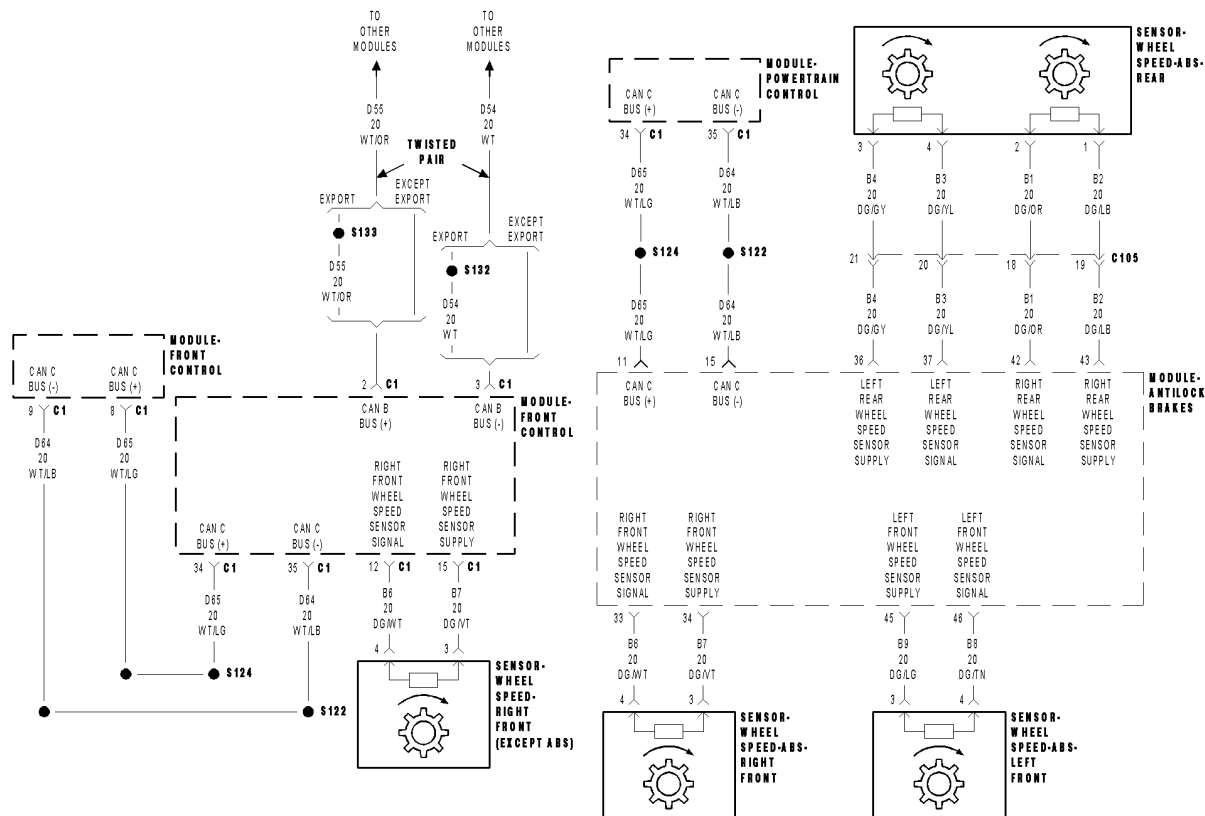

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

---

# U1120-LOST WHEEL DISTANCE MESSAGE

**U1120-LOST WHEEL DISTANCE MESSAGE (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

The PCM doesn't receive a wheel distance message from the Anti-lock brake Module or FCM (NON-ABS) over the CAN C bus.

Possible Causes
CAN C BUS CIRCUIT OPEN OR SHORTED ANTI-LOCK BRAKE MODULE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The PCM receives the vehicle speed signal over the CAN C bus from the Anti-lock Brake Module or FCM (NON-ABS).

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**U1120-LOST WHEEL DISTANCE MESSAGE (CONTINUED)****2. U0121-LOST COMMUNICATION WITH ABS MODULE/P0141-LOST COMMUNICATION WITH FCM ALSO SET**

**Note:** If the vehicle is not equipped with ABS the VSS signal will come from the FCM.

With the scan tool, read the appropriate module for DTCs.

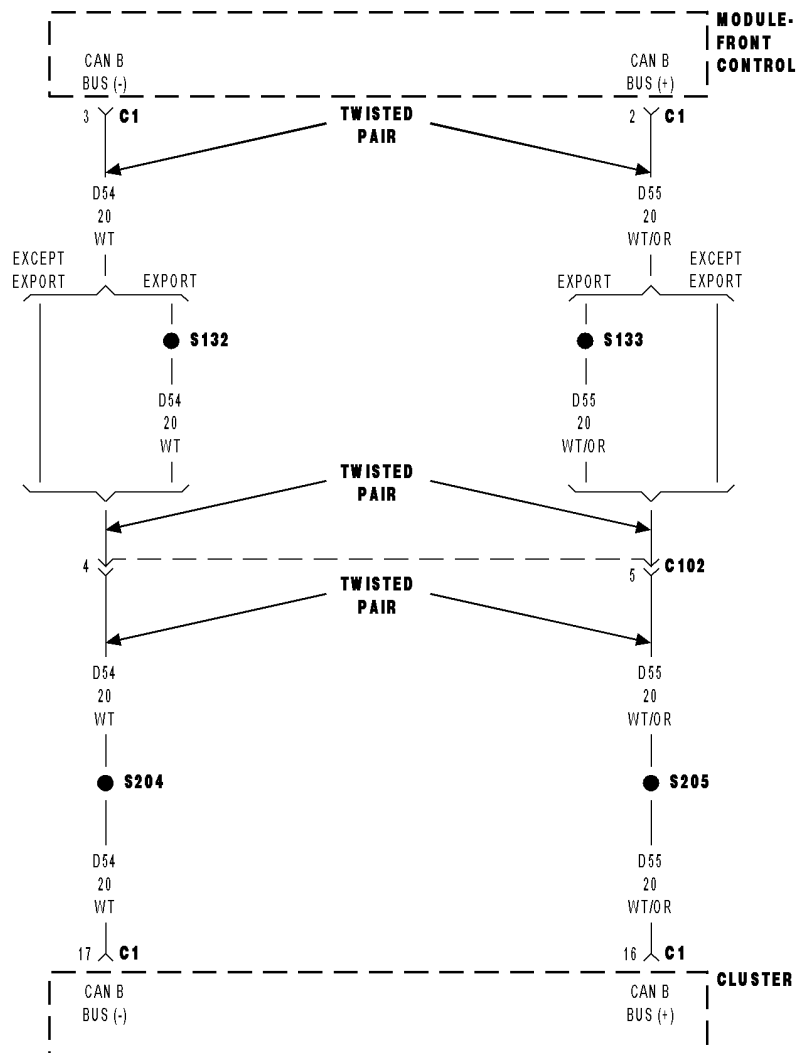

**Is the U0121-LOST COMMUNICATION WITH ABS MODULE/P0141-Lost Communicate With FCM also set?**

**Yes** >> Perform the appropriate diagnostic test.Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

---

## U1403-IMPLAUSIBLE FUEL LEVEL SIGNAL

**U1403-IMPLAUSIBLE FUEL LEVEL SIGNAL (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The fuel level message that the PCM is receiving is implausible. The circuit is continuously monitored.

Possible Causes
CAN B OPEN OR SHORTED CLUSTER MODULE FRONT CONTROL MODULE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Theory of Operation**

The Front Control Module receives a fuel level signal over CAN B from the Cluster Module. Once the message is received from the FCM, it passages the fuel level message via CAN C to the PCM.

**Diagnostic Test****1. ACTIVE DTC**

**Note:** Diagnose all CAN B and C communication failures before continuing.

Ignition on, engine not running.

With a scan tool read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

## U1403-IMPLAUSIBLE FUEL LEVEL SIGNAL (CONTINUED)

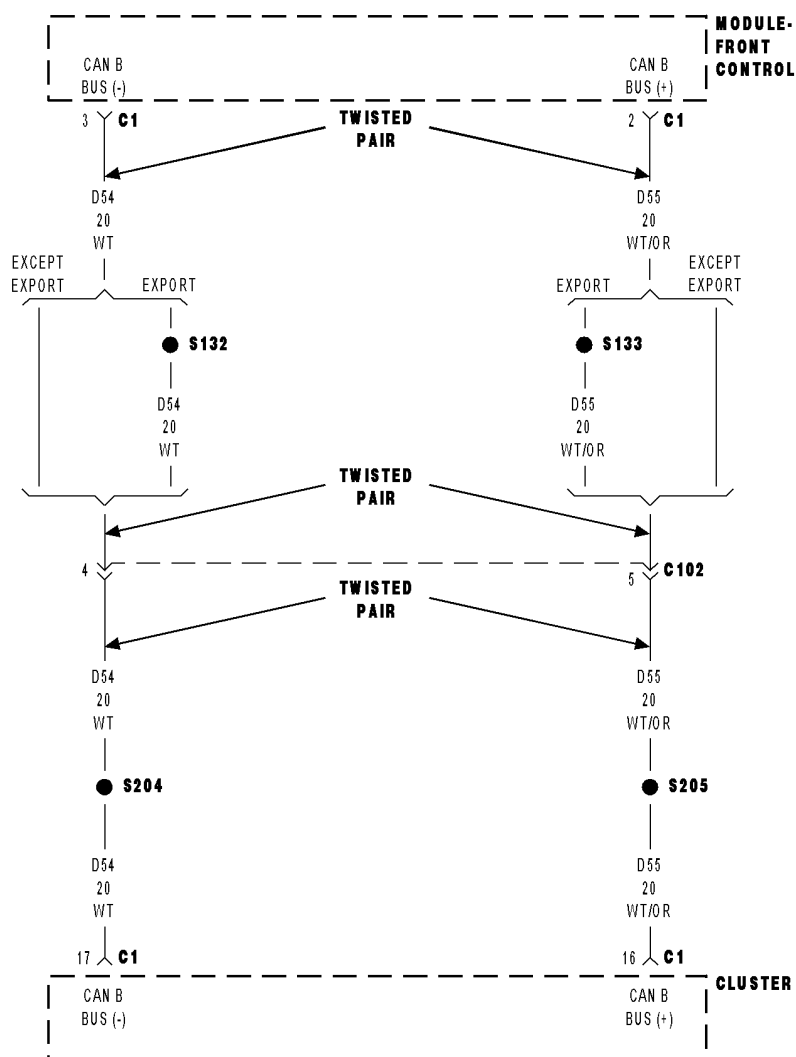

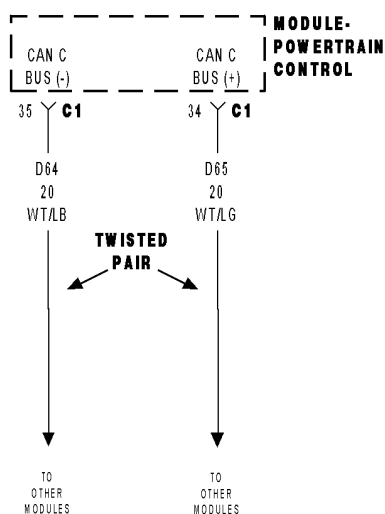

### 2. U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT ALSO ACTIVE

With a scan tool check for DTCs in the FCM.

**Is the U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT active at this time?**

- Yes** >> Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING for the U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
-

# U1411-IMPLAUSIBLE FUEL VOLUME SIGNAL RECEIVED

**U1411-IMPLAUSIBLE FUEL VOLUME SIGNAL RECEIVED (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The fuel volume message that the PCM is receiving is implausible. The circuit is continuously monitored.

Possible Causes
CAN B OPEN OR SHORTED CLUSTER MODULE FRONT CONTROL MODULE PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Theory of Operation**

The Front Control Module receives a fuel volume signal over CAN B from the Cluster Module. Once the message is received from the FCM, it passages the fuel level message via CAN C to the PCM.

**Diagnostic Test****1. ACTIVE DTC**

**Note: Diagnose all CAN B and C communication failures before continuing.**

Ignition on, engine not running.

With a scan tool read DTCs.

**Is the DTC active at this time?**

- Yes** >> Go To 2
- No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**U1411-IMPLAUSIBLE FUEL VOLUME SIGNAL RECEIVED (CONTINUED)****2. U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT ALSO ACTIVE**

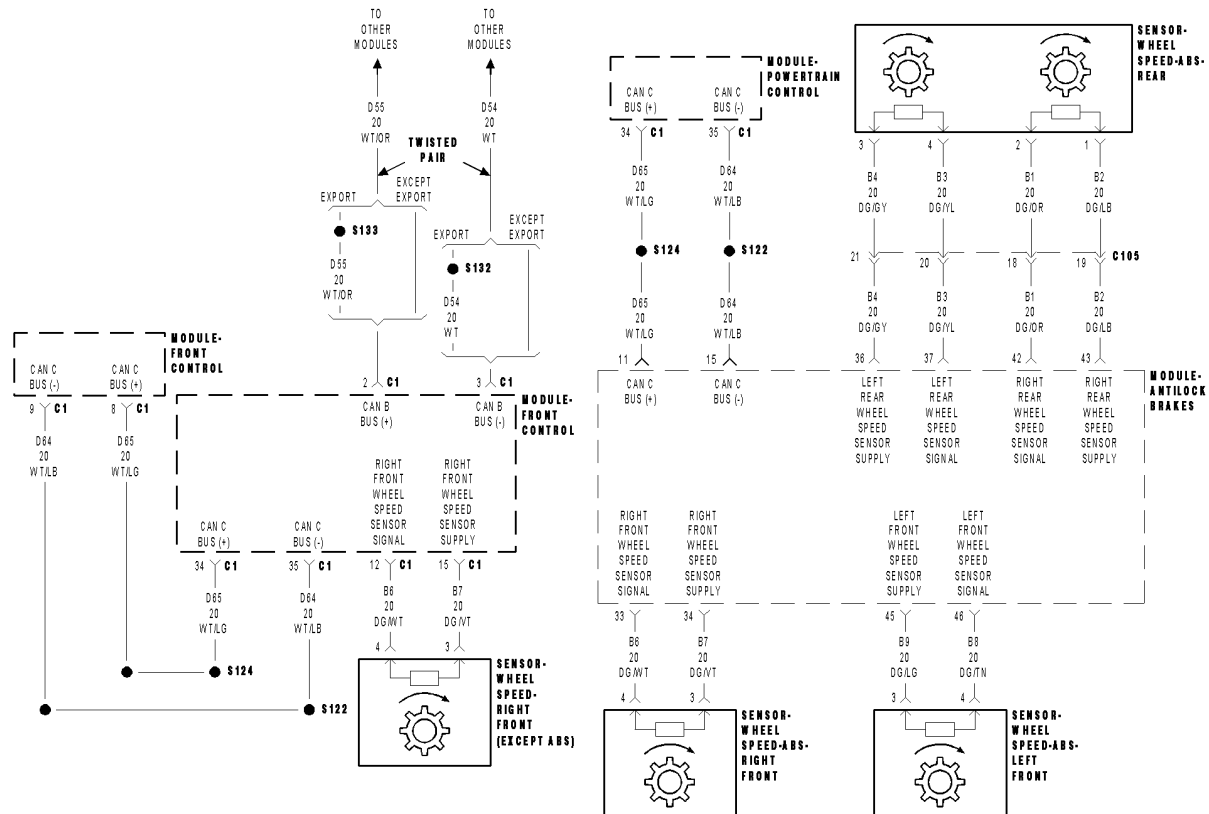

With a scan tool check for DTCs in the FCM.

**Is the U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT active at this time?**

- Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the U0019-NO COMMUNICATION ON THE CAN B BUS CIRCUIT diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.
- No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.
-

## U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED

**U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM gets an implausible signal over the CAN C circuit from the ABS Module or FCM (NON-ABS). The circuit is continuously monitored.

Possible Causes
CAN C BUS CIRCUIT SHORTED
CAN C BUS CIRCUIT OPEN
ABS MODULE
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

**Theory of Operation**

The ABS Module or FCM (NON-ABS) sends vehicle speed information over the CAN C Bus circuit to the PCM.

**Diagnostic Test****1. ACTIVE DTC**

**Note:** Diagnose all CAN B and C communication failures before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**2. U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT IS ACTIVE**

Continue reading DTCs.

**Is the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT ACTIVE at this time?**

**Yes** >> Refer to the Diagnostic Procedure for the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT.

**No** >> Go To 3

**U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED (CONTINUED)****3. ABS MODULE IS ACTIVE ON THE CAN C BUS**

With the scan tool, select ECU View.

Verify that the ABS Module is active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

---

**4. ACTIVE DTCS IN THE FCM**

With the scan tool, select ECU View and select FCM.

With the scan tool, read active DTCs.

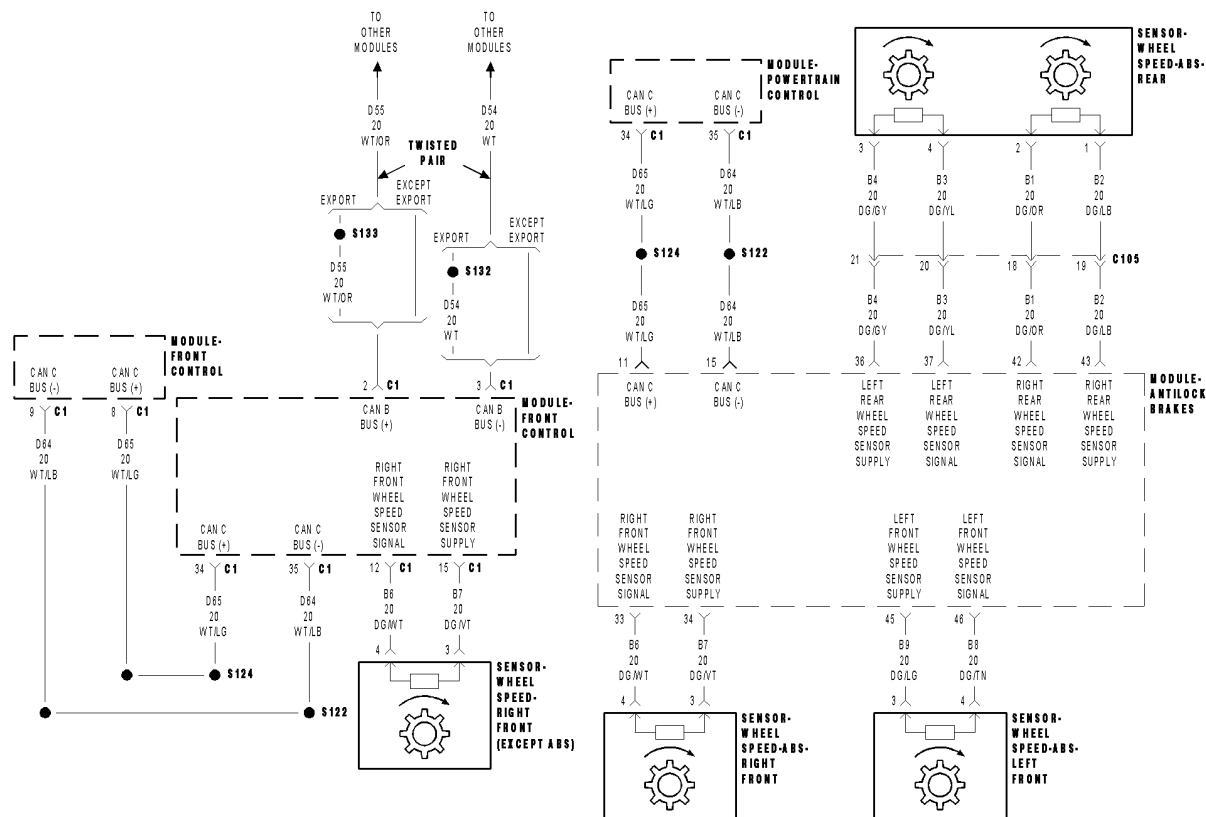

**Is the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT ACTIVE in the FCM at this time?**

**Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for U0001 diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform POWERTRAIN VERIFICATION TEST – VER 5.

---

## U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED

U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED (CONTINUED)

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram Refer to Section 8W.

- **When Monitored:**  
Ignition on.
- **Set Condition:**  
The PCM gets an implausible signal over the CAN C circuit from the ABS Module or FCM (NON-ABS). The circuit is continuously monitored.

Possible Causes
VEHICLE SPEED SENSOR FAULT ACTIVE IN ANTI-LOCK BRAKE MODULE
CAN C BUS CIRCUIT SHORTED
CAN C BUS CIRCUIT OPEN
ABS MODULE
PCM

Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

Theory of Operation

The ABS Module or FCM (NON-ABS) sends an implausible distance signal over the CAN C Bus circuit to the PCM.

Diagnostic Test

1. ACTIVE DTC

**Note:** Diagnose all CAN B and C communication failures before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

Is the U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED active at this time?

- Yes

>> Go To 2
- No

>> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED (CONTINUED)****2. ABS MODULE IS ACTIVE ON THE CAN C BUS**

With the scan tool, select ECU View.

Verify that the ABS Module active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 3

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

---

**3. DTCS STORED OR ACTIVE IN THE ABS MODULE**

Check for wheel speed DTCs in the ABS Module or FCM (NON-ABS).

**Are any DTCs active or stored in the ABS Module/FCM?**

**Yes** >> Refer to the appropriate section and perform the diagnostics for the DTCs.  
Perform VERIFICATION TEST – VER

**No** >> Go to 4

---

**4. ACTIVE DTCS IN THE FCM**

With the scan tool, select ECU View and select FCM.

With the scan tool, read active DTCs.

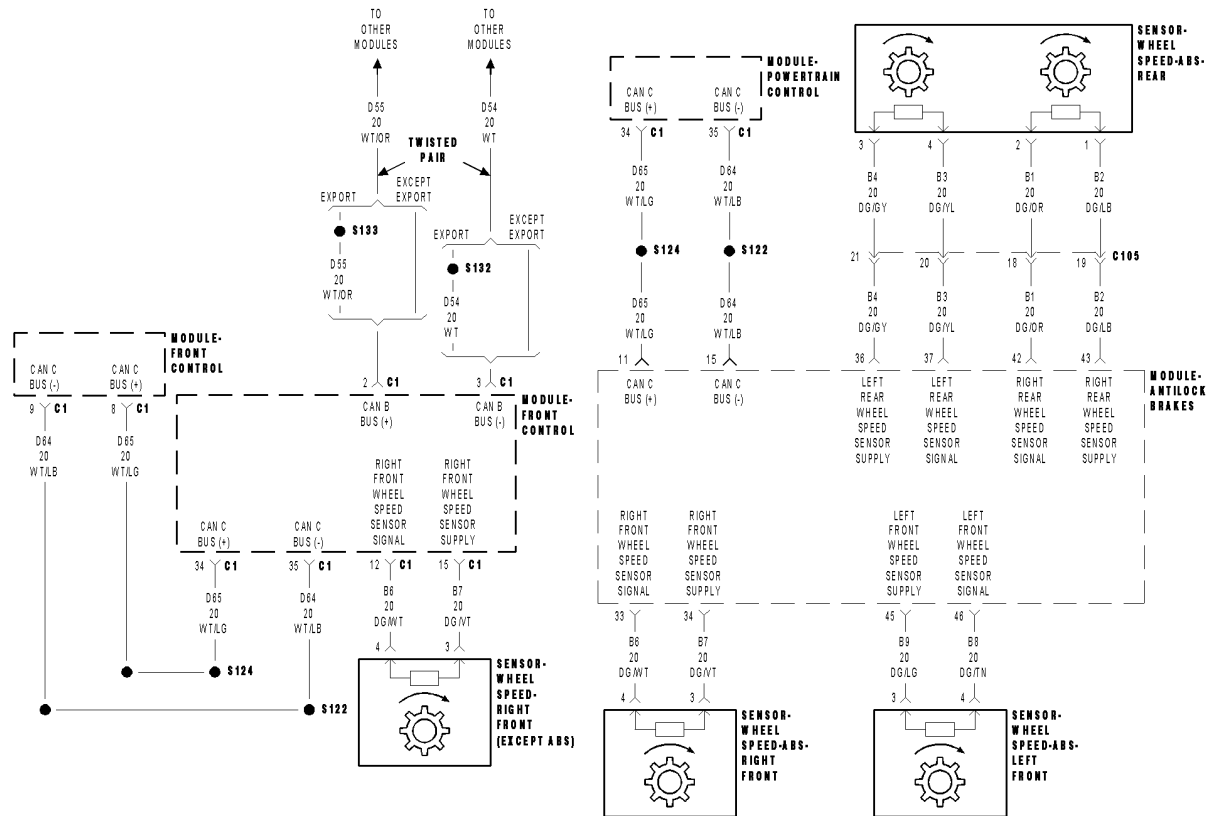

**Are any Communication DTCs active in the FCM relating to the ABS System?**

**Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform POWERTRAIN VERIFICATION TEST – VER 5.

---

## U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED

**U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

- **When Monitored:**

Ignition on.

- **Set Condition:**

The PCM gets an implausible signal over the CAN C circuit from the ABS Module or FCM (NON-ABS). The circuit is continuously monitored.

Possible Causes
VEHICLE SPEED SENSOR FAULT ACTIVE IN ANTI-LOCK BRAKE MODULE
CAN C BUS CIRCUIT SHORTED
CAN C BUS CIRCUIT OPEN
ABS MODULE
PCM

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ABS Module or FCM (NON-ABS) sends an implausible distance signal over the CAN C Bus circuit to the PCM.

## Diagnostic Test

### 1. ACTIVE DTC

**Note:** Diagnose all CAN B and C communication failures before continuing.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5.

**U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED (CONTINUED)****2. ABS MODULE IS ACTIVE ON THE CAN C BUS**

With the scan tool, select ECU View.

Verify that the ABS Module active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 3

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

---

**3. DTCS STORED OR ACTIVE IN THE ABS MODULE/FCM (NON-ABS)**

Check for wheel speed DTCs in the ABS Module or FCM (NON-ABS).

**Are any DTCs active or stored in the ABS Module/FCM?**

**Yes** >> Refer to the appropriate section and perform the diagnostics for the DTCs.  
Perform VERIFICATION TEST – VER

**No** >> Go to 4

---

**4. ACTIVE DTCS IN THE FCM**

With the scan tool, select ECU View and select FCM.

With the scan tool, read active DTCs.

**Are any Communication DTCs active in the FCM relating to the ABS System?**

**Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the diagnostic procedures.  
Perform BODY VERIFICATION TEST – VER 1.

**No** >> Replace and program the Powertrain Control Module per Service Information.  
Perform POWERTRAIN VERIFICATION TEST – VER 5.

---

**\*5.7L INTERMITTENT NO CRANK CONDITION**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
ETC STARTER INHIBIT

**Diagnostic Test****1. ETC STARTER INHIBIT**

**Note:** ETC equipped engines will try to relearn ETC position when the key is left in the on position for an extended period of time and will not allow the starter to crank during this procedure. This procedure can take up to 2.5 seconds.

To verify the cause of the no crank condition or delayed crank use the scan tool, and read the ETC Starter Inhibit mileage.

The controller will store the mileage at which the no start condition occurred because of the ETC testing procedure.

This is considered normal operation for a vehicle equipped with an Electronic Throttle Control System and no repairs are necessary.

**Is a mileage stored under the ETC Starter Inhibit?**

**Yes** >> Test Complete.

**No** >> Refer to the diagnostic procedure for \*No Crank Condition for further assistance.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER -2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

## \*CHECKING THE FUEL DELIVERY SYSTEM

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
RESTRICTED FUEL SUPPLY LINE FUEL PUMP INLET STRAINER PLUGGED (N1) FUEL PUMP RELAY OUTPUT CIRCUIT OPEN FUEL PUMP RELAY FUEL PUMP

### Diagnostic Test

#### 1. FUEL PUMP OPERATION

Ignition on, engine not running.

With a scan tool, actuate the Fuel System test.

**Note:** It may be necessary to use a mechanics stethoscope in the next step.

Listen for fuel pump operation at the fuel tank.

**CAUTION: Stop All Actuations.**

**Does the Fuel Pump operate?**

**Yes** >> Go To 2

**No** >> Go To 6

---

#### 2. FUEL PRESSURE

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge at the engine.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note:** **NOTE:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

**CAUTION: Stop All Actuations.**

**Choose a conclusion that best matches your fuel pressure reading.**

**Below Specification**

Go To 3

**Within Specification**

Test Complete.

**Above Specification**

Replace the fuel filter/fuel pressure regulator.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*CHECKING THE FUEL DELIVERY SYSTEM (CONTINUED)****3. RESTRICTED FUEL SUPPLY LINE**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure even with the engine off. Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16") or #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**CAUTION: Stop All Actuations.**

**Is the fuel pressure within specification now?**

**Yes** >> Repair/replace fuel supply line as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 4

---

**4. CHECKING FUEL TANK SIPHON HOSE AND FUEL LINE**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Gain access to the Fuel Pump Module and the Fuel Tank Module.

Inspect the following fuel components:

- Fuel line and siphon hose between the Fuel Pump Module and the Fuel Tank Module. Look for disconnected and/or damaged lines or hoses
- Fuel Pressure Regulator not properly seated in the module.
- Debris near or in the modules fuel pick up.

**Were the above items in good working condition?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*CHECKING THE FUEL DELIVERY SYSTEM (CONTINUED)****5. FUEL PRESSURE REGULATOR**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove the Fuel Tank Module.

Replace the Fuel Pressure Regulator.

Install the Fuel Pump Module and the Fuel Tank Module in accordance with the service information.

Retest the fuel pressure.

**Is the fuel pressure within specification?**

**Yes** >> Test complete.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**6. FUEL PUMP RELAY FUSED B+ CIRCUIT OPEN**

Turn the ignition off.

Remove the Fuel Pump Relay from the IPM.

Using a 12 volt test light connected to ground, probe the (A35) Fused B+ circuit at the relay connector.

**Does the test illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (A35) Fused B+ circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. (N1) FUEL PUMP RELAY OUTPUT CIRCUIT OPEN**

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Measure the resistance of the (N1) Fuel Pump Relay Output circuit from the relay connector to the fuel pump module connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the Fuel Pump Relay.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Repair the open in the (N1) Fuel Pump Relay Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*HARD START FUEL SYSTEM**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
FUEL CONTAMINATION RESTRICTED FUEL SUPPLY LINE FUEL PUMP INLET STRAINER PLUGGED FUEL PUMP MODULE FAULTY FUEL PUMP MODULE FUEL INJECTOR(S)

**Diagnostic Test****1. CHECKING FUEL PRESSURE**

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install a fuel pressure gauge at the engine.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: NOTE:** Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Choose a conclusion that best matches your fuel pressure reading.

**Below Specification**

Go To 2

**Within Specification**

Go To 4

---

**\*HARD START FUEL SYSTEM (CONTINUED)****2. RESTRICTED FUEL SUPPLY LINE**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel supply line at the fuel pump module.

Install special tool #6539 (5/16") #6631(3/8") fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**Note: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Visually and physically inspect the fuel supply lines between the fuel tank and the fuel rail. Repair/replace as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**3. CHECKING THE FUEL INLET STRAINER**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace the Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*HARD START FUEL SYSTEM (CONTINUED)****4. FUEL PUMP MODULE**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi)

**Does the fuel pressure drop?**

**Yes** >> Replace Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 5

---

**5. FUEL INJECTOR(S)**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove special tool #C4390.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and fuel pump module.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi)

**Does the fuel pressure drop?**

**Yes** >> Replace the leaking fuel injectors.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Check the fuel for contaminants.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*ENGINE CRANKS BUT DOES NOT START**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
NO START PRE-TEST POWERTRAIN FUSES OPEN SECONDARY INDICATORS PRESENT ENGINE MECHANICAL PROBLEM ASD RELAY OUTPUT CIRCUIT OPEN FUEL CONTAMINATION

**Diagnostic Test****1. NO START PRE-TEST**

**Note:** The following list of items must be checked before continuing with any no start tests.

The battery must be fully charged and in good condition. A low charged battery may produce invalid test results. If the battery is low, charge the battery and then attempt to start the vehicle by cranking the engine for 15 seconds, 3 consecutive times.

This will allow any DTCs to set that may have been erased due to a dead battery.

Try to communicate with PCM if not able to communicate check fuses.

Make sure the Powers and Ground to the PCM are OK.

Make sure the PCM communicates with the scan tool and that there are no DTCs stored in the PCM memory. If the PCM reports a No Response condition, refer to section 8 Electrical Electronic Control Module Electrical Diagnostics for the proper tests.

Read the PCM DTCs with the scan tool. If any DTCs are present, they must be repaired before continuing with any other No Start diagnostic tests. Refer to the Table of Contents for the related P-code that is reported by the PCM.

Make sure that the Bus is functional. Attempt to communicate with the Instrument Cluster and VTSS, If you are unable to establish communications refer to 8 Electrical Electronic Control Module Electrical Diagnostics for the proper Diagnostic procedures.

The Sentry Key Immobilizer System must be operating properly. Check for proper communication with the scan tool and check for DTCs that may be stored in the Sentry Key Immobilizer Module (SCREEM). Repair the DTC(s) before continuing.

If no DTCs are found, using the scan tool, select Clear PCM (BATT Disconnect).

Crank the engine several times. Using the scan tool, read DTCs. If a DTC is present perform the DTC diagnostics before continuing.

**Were any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 2

---

**\*ENGINE CRANKS BUT DOES NOT START (CONTINUED)****2. OPEN FUSE**

Check for any open fuses in both IPM (PDC) or Junction Block that may be related to the No Start condition.

**Are any of the fuses open?**

- Yes** >> Replace the open fuse and check the related circuit(s) for a short to ground.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 3
- 

**3. SECONDARY INDICATORS PRESENT**

Ignition on, engine not running.

With the scan tool, under DTCs & Related Functions, read the Secondary Indicators while cranking the engine.

**Are there any Secondary Indicators present while cranking the engine?**

- Yes** >> Refer to the Engine Electrical Diagnostics group and perform the tests related to the secondary indicator that is reported by the scan tool.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 4
- 

**4. POSSIBLE MECHANICAL PROBLEMS**

Check for any of the following conditions/mechanical problems.

ENGINE VALVE TIMING - must be within specifications, check for broken timing components

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

**Are there any engine mechanical problems?**

- Yes** >> Repair as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)
- No** >> Go To 5
-

**\*ENGINE CRANKS BUT DOES NOT START (CONTINUED)****5. (K542) ASD RELAY OUTPUT CIRCUIT OPEN**

Turn the ignition off.

Remove the ASD relay from the IPM.

Disconnect the PCM harness connectors.

Verify the ASD Relay is getting voltage on the Fused B+ circuits before continuing.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the ASD Relay Output circuit from the ASD Relay connector to the appropriate terminals of special tool #8815, Ignition coil, and the fuel injectors.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K542) ASD Relay Output circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**6. FUEL PUMP DELIVERY**

Verify that the Fuel tank is not empty before continuing.

Follow the diagnostics for Checking Fuel Delivery in the Driveability section of this manual.

**Was the No Start condition solved after following the above diagnostic test?**

**Yes** >> Test Complete.

**No** >> Check for contamination/water in the fuel. Make sure the fuel being used in this vehicle meets manufactures Fuel Requirement, refer to the service manual.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*FUEL PRESSURE LEAK DOWN**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
FUEL PUMP MODULE
FUEL INJECTOR(S)

**Diagnostic Test****1. FUEL PUMP MODULE**

**Note:** Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.

Turn the ignition off.

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Install special tool #6539 (5/16") or #6631 (3/8") fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note:** Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note:** The pressure should not fall below 241 KPa (35 psi)

**Does the fuel pressure drop?**

**Yes** >> Replace Fuel Pump Module.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 2

---

**\*FUEL PRESSURE LEAK DOWN (CONTINUED)****2. FUEL INJECTOR(S)**

**WARNING:** The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.

Remove special tool #C4390.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**Note: NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and fuel pump module.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**Note: The pressure should not fall below 241 KPa (35 psi)**

**Does the fuel pressure drop?**

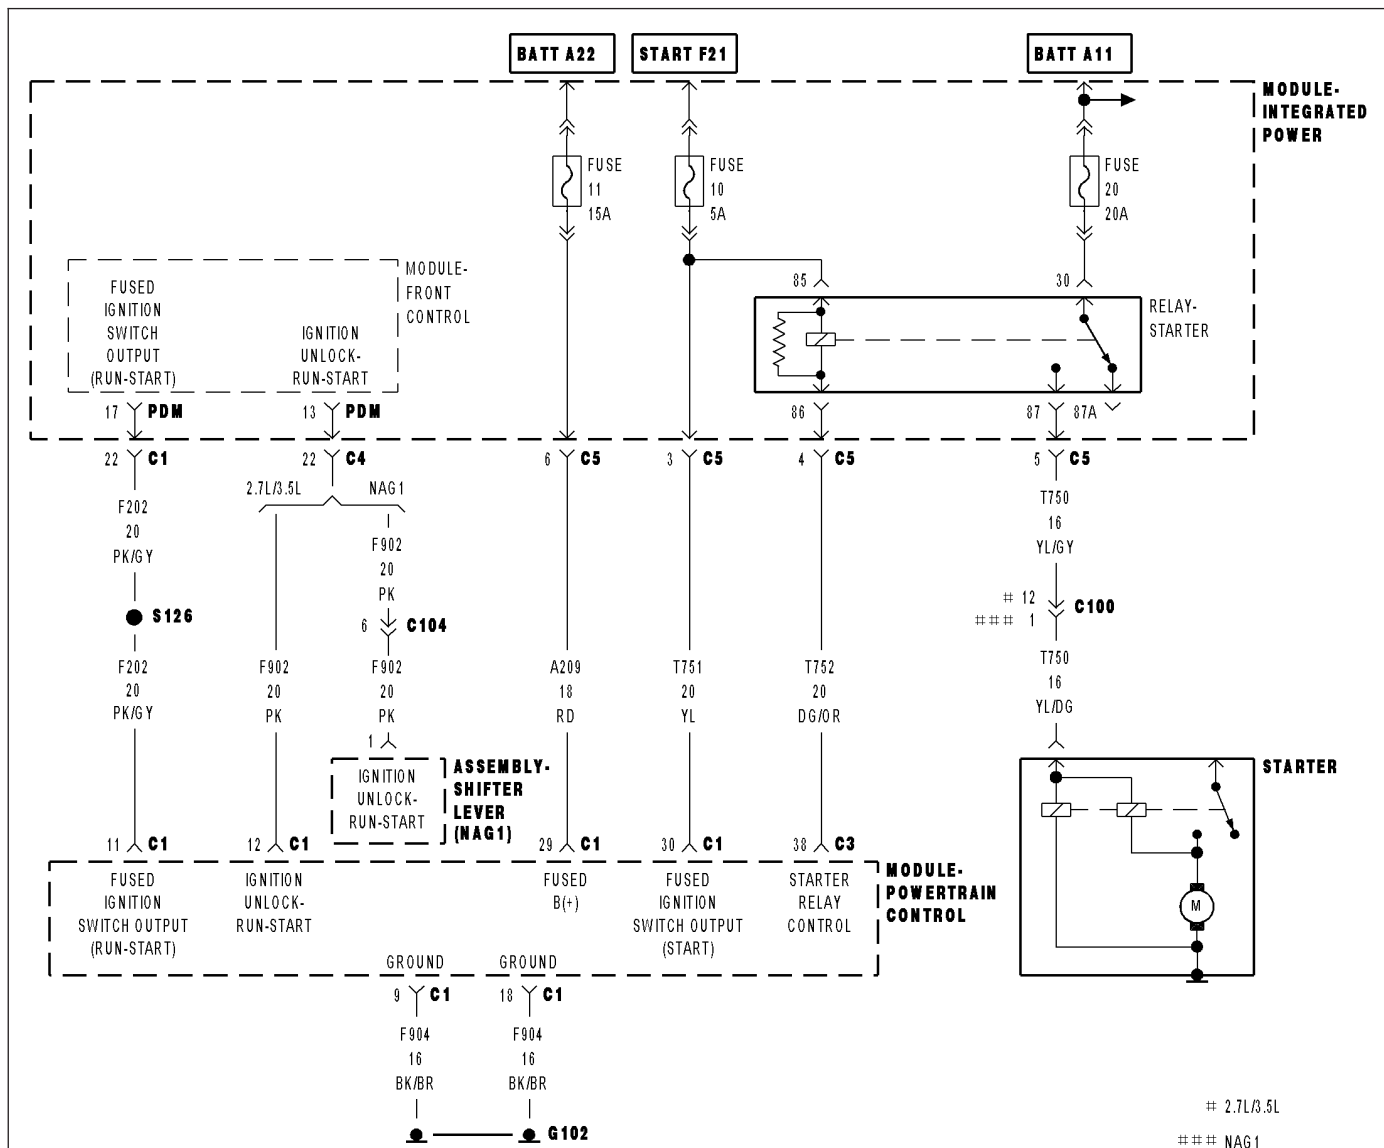

**Yes** >> Replace the leaking fuel injectors.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 2.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Test Complete.

---

**\*NO CRANK CONDITION**

**\*NO CRANK CONDITION (CONTINUED)**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
MECHANICAL CONDITION BATTERY CIRCUIT RESISTANCE TOO HIGH FUSED IGNITION SWITCH OUTPUT CIRCUITS FUSED B+ CIRCUIT OPEN (T752) STARTER RELAY CONTROL CIRCUIT OPEN (T750) STARTER RELAY OUTPUT CIRCUIT OPEN TRANSMISSION RANGE SENSOR STARTER RELAY STARTER

**Diagnostic Test****1. MECHANICAL CONDITION**

**Note:** Verify the battery is fully charged and capable of passing a load test before continuing.

**WARNING:** Make sure the battery is disconnected, then wait two minutes before proceeding. Failure to do so may result in personal injury or possible death.

Turn the engine over by hand to make sure the engine is not seized.

**Is the engine able to turn over?**

**Yes** >> Go To 2

**No** >> Repair the mechanical condition preventing the starter motor from cranking.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**2. EXCESSIVE RESISTANCE IN THE BATTERY CIRCUIT**

Turn the ignition off.

Check the Battery Cables for excessive resistance using the service information procedure.

**Did either Battery Cable have a voltage drop greater than 0.2 of a volt?**

**Yes** >> Repair the excessive resistance in the Battery circuit.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

---

**\*NO CRANK CONDITION (CONTINUED)****3. STARTER RELAY**

Turn ignition off.

Remove the Starter Relay from IPM.

**CAUTION:** The Parking Brake must be on and the Transmission must be in park for a vehicle equipped with an automatic transmission.

**WARNING:** When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.

Briefly connect a jumper wire between Fused B+ circuit and the (T750) Starter Relay Output circuit.

**Did the Starter Motor crank the engine?**

**Yes** >> Go To 4

**No** >> Go To 6

---

**4. (T751) FUSED IGNITION SWITCH OUTPUT CIRCUIT**

Ignition on, engine not running.

Using a 12-volt test light, probe the (T751) Fused Ignition Switch Output circuit in the Starter Relay connector.

While observing 12-volt test light, hold ignition key in the start position.

**Does the test light illuminate brightly?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (T751) Fused Ignition Switch Output circuit. Inspect related fuses and repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**5. (T752) STARTER RELAY CONTROL CIRCUIT OPEN**

Turn the ignition off.

Disconnect the PCM harness connectors.

Measure the resistance in the (T752) Starter Relay Control circuit from the Relay terminal to the appropriate terminals of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the Starter Motor Relay.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Repair the open in the (T752) Starter Relay Control circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*NO CRANK CONDITION (CONTINUED)****6. FUSED B+ CIRCUIT OPEN**

Turn the ignition off.

Using a 12-volt test light connected to ground, probe the Fused B+ circuit at the Starter Relay terminal.

**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the excessive resistance in the Fused B+ circuit. Inspect related fuses and repair as necessary. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**7. (T750) STARTER RELAY OUTPUT CIRCUIT OPEN**

Disconnect the Starter Relay Output connector from the Starter Solenoid.

Measure the resistance of the (T750) Starter Relay Output circuit between the Relay and the Solenoid harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (T750) Starter Relay Output circuit. Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**8. STARTER**

**If there are no other possible causes remaining, review repair.**

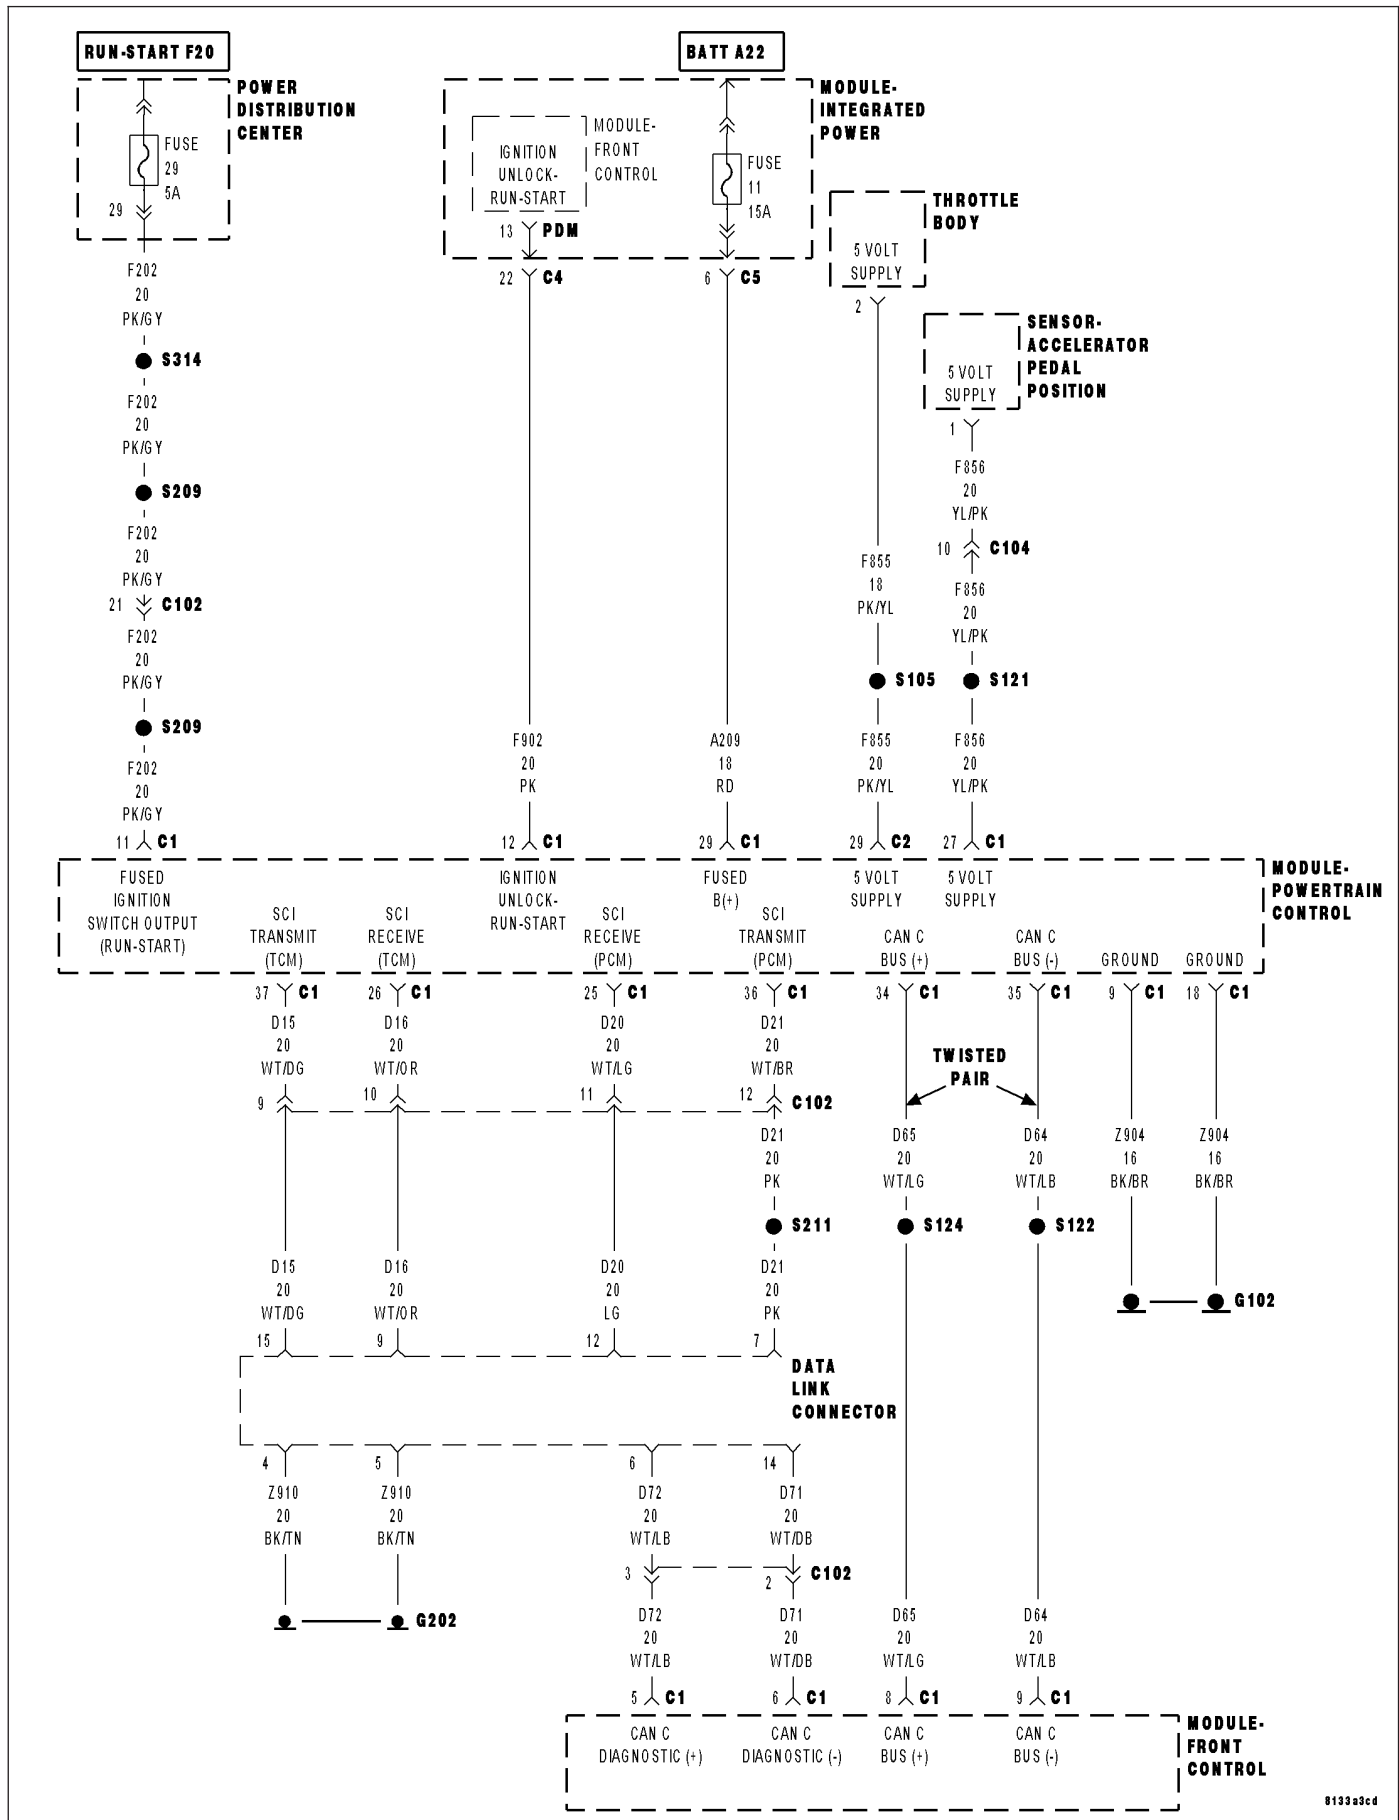

**Repair**

Replace the Starter.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

# \*NO RESPONSE WITH A NO START CONDITION

**\*NO RESPONSE WITH A NO START CONDITION (CONTINUED)**  
For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).  
For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
(A209) PCM FUSED B+ CIRCUIT PCM NO RESPONSE (F202) (F902) PCM FUSED IGNITION SWITCH OUTPUT CIRCUITS (Z904) PCM GROUND CIRCUITS CRANKSHAFT POSITION SENSOR (F855) 5-VOLT SENSOR OPEN/SHORTED (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND PCM

Diagnostic Test

1. (A209) PCM FUSED B+ CIRCUIT

**Note:** The scan tool and cable must be operating properly for the results of this test to be valid.

**Note:** Make sure the ignition switch was on while trying to communicate with the PCM.

Turn the ignition off.  
Disconnect the PCM harness connectors.

**CAUTION:** Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.

Using a 12-volt test light connected to ground probe the appropriate terminal of special tool #8815.

Does the test light illuminate brightly?

- Yes    >> Go To 2
- No    >> Repair the open or short to ground in the (A209) Fused B+ circuit. Inspect and replace fuses as necessary.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**\*NO RESPONSE WITH A NO START CONDITION (CONTINUED)****2. (F202) (F902) PCM FUSED IGNITION SWITCH CIRCUITS**

Using a 12-volt test light connected to ground, probe the PCM Fused Ignition Switch Output circuit in the appropriate terminals of special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the (F202) and (F902) Ignition Switch Output circuits. Inspect and replace fuses as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**3. (Z904) PCM GROUND CIRCUITS**

Using a 12-volt test light connected to battery voltage, probe the (Z904) PCM ground circuits in the appropriate terminals of special tool #8815.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the PCM ground circuits.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**\*NO RESPONSE WITH A NO START CONDITION (CONTINUED)****4. (F855) 5-VOLT SUPPLY CIRCUIT**

Turn the ignition off.

Connect the PCM harness connectors.

Disconnect the Crankshaft Position Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Go To 6

**5. CKP SENSOR**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the Throttle Body harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> If communication is available with a PCM on a like vehicle, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace the Crankshaft Position Sensor.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**\*NO RESPONSE WITH A NO START CONDITION (CONTINUED)****6. (F855) 5-VOLT SENSOR OPEN/SHORTED**

Turn the ignition off.

Disconnect the Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit.

Disconnect all the sensors that use the (F855) 5-volt Supply circuit.

**Did the voltage return to 4.5 to 5.2 volts when disconnecting any of the sensors.**

**Yes** >> Replace the sensor that is pulling down the (F855) 5-volt supply.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

**7. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Turn the ignition off.

Disconnect PCM harness connectors.

Disconnect all the sensors that share the (F855) 5-volt Supply circuit.

Measure the resistance between ground and the (F855) 5-volt Supply circuit at one of the sensor harness connectors.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 8

**8. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND**

Disconnect all the sensors that share the (F856) 5-volt Supply circuit.

Measure the resistance between ground and the (F856) 5-volt Supply circuit at one of the sensor harness connectors.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 9

**\*NO RESPONSE WITH A NO START CONDITION (CONTINUED)****9. PCM**

**Note:** Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**\*START AND STALL CONDITION**

For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W.**

Possible Causes
CURRENT PCM DTCS
CURRENT SKIM DTCS
THROTTLE POSITION SENSOR SWEEP
TP SENSOR NO.1 VOLTAGE GREATER THAN 0.92 VOLTS WITH THROTTLE CLOSED
ECT SENSOR
OTHER POSSIBLE CAUSES FOR START AND STALL CONDITON
FUEL CONTAMINATION

**Diagnostic Test****1. CHECKING DTCS**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Are any DTCs present?**

**Yes** >> Refer to the appropriate Diagnostic Procedure.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.

**No** >> Go To 2

**2. CHECKING SKIM DTCS**

**Note:** If you are unable to communicate with the SKIM/SKREEM, refer to the VEHICLE THEFT AND SECURITY ELECTRICAL DIAGNOSTICS in Section 8 and perform the appropriate diagnostics.

With the scan tool, read the SKIM codes.

**Are there any SKIM DTCs?**

**Yes** >> Refer to the Sentry Key Vehicle Theft Security Electrical Diagnostics in Section 8.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 3

**3. TP SENSOR SWEEP**

Ignition on, engine not running.

Using a scan tool, perform the pedal follower test and monitor both TP Sensor voltage readings.

**Was the voltage change smooth for both sensors?**

**Yes** >> Go To 4

**No** >> Replace the Throttle Body Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**\*START AND STALL CONDITION (CONTINUED)****4. TP SENSOR NO.1 VOLTAGE GREATER THAN 0.92 VOLTS WITH THROTTLE CLOSED**

With the scan tool, read Throttle Position Sensor No.1 voltage.

Throttle must be against its stop.

**Is the voltage 0.92 or less with the Throttle closed?**

**Yes** >> Go To 5

**No** >> Check for a binding throttle condition. If OK, replace the Throttle Body Assembly.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**5. ECT SENSOR OPERATION**

**Note:** For this test to be valid, the thermostat must be operating correctly.

**Note:** This test works best if performed on a cold engine (cold soaked).

**Note:** If the vehicle was allowed to sit over night with no engine start, coolant temperature should be near ambient temperatures.

Ignition on, engine not running.

With the scan tool, read the ECT value.

**Note:** If engine coolant temperature is above 82° C (180° F), allow the engine to cool until 65° C (150° F) is reached.

Start the engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temperature value change should be a smooth transition from start up to normal operating temp 82° C (180° F). The value should reach at least 82° C (180° F).

**Did the Engine Temperature value increase smoothly and did it reach at least 82° C (180° F)?**

**Yes** >> Go To 6

**No** >> Replace the Engine Coolant Temperature Sensor.  
Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

---

**6. OTHER POSSIBLE CAUSES OF START AND STALL CONDITION**

The following additional items should be checked as a possible cause for a start and stall condition.

Refer to any Technical Service Bulletins (TSBs) that may apply to the symptom.

The exhaust system must be free of any restrictions.

The engine compression must be within specifications.

The engine valve timing must be within specifications.

The engine must be free from vacuum leaks.

The throttle body must be free of carbon buildup and dirt.

**Do any of the above conditions exist?**

**Yes** >> Repair as necessary.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

**No** >> Go To 7

---

**\*START AND STALL CONDITION (CONTINUED)****7. FUEL PUMP DELIVERY**

Verify that the Fuel tank is not empty before continuing.

Follow the diagnostics for Checking Fuel Delivery in this manual.

**Was the No Start condition solved after following the above diagnostic test?**

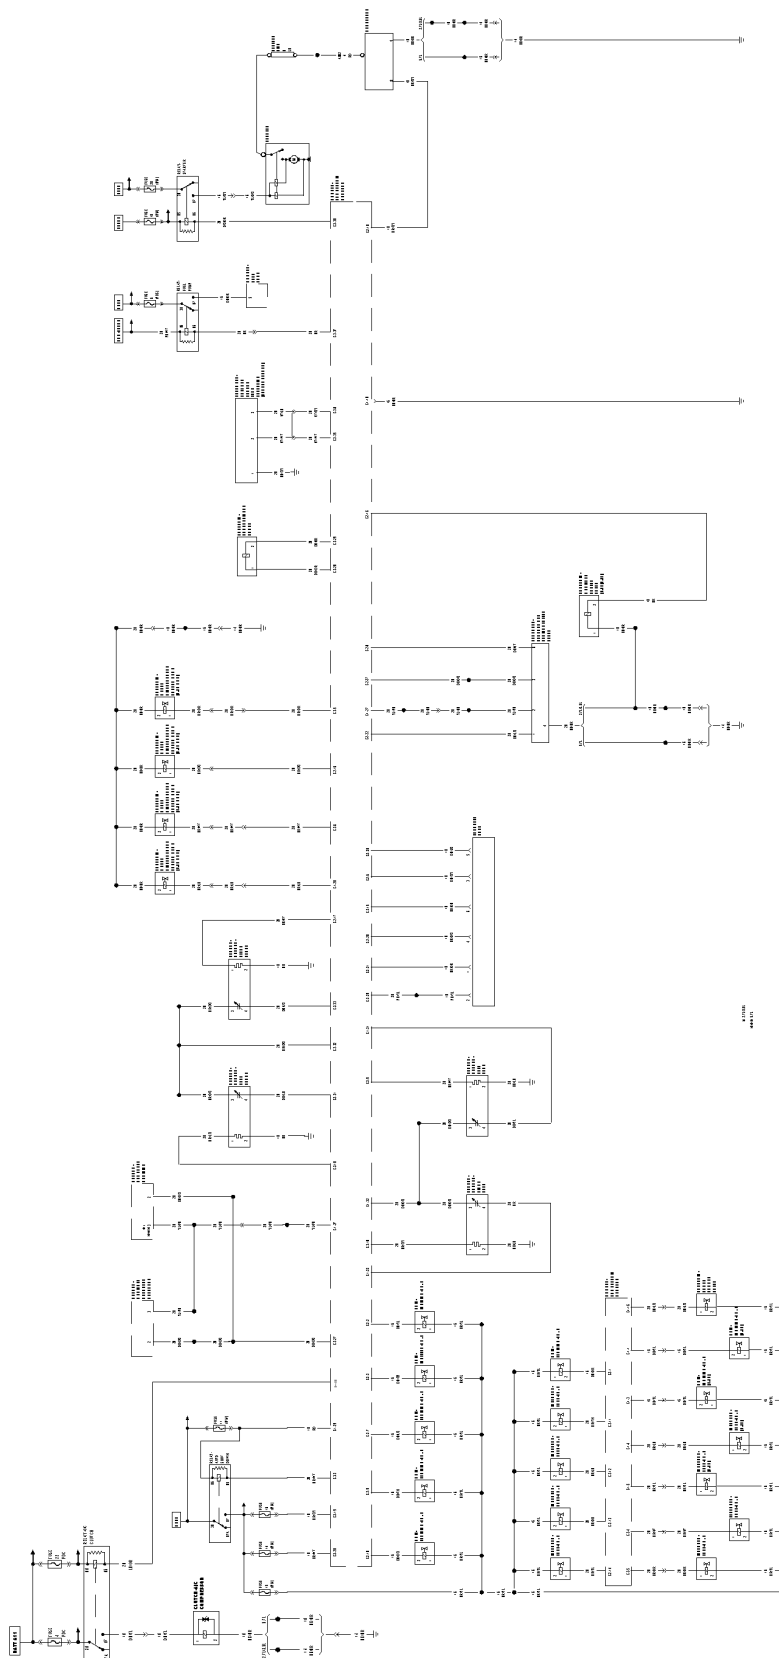

**Yes** >> Test Complete.

**No** >> Check for contamination/water in the fuel. Ensure the fuel being used in this vehicle meets OEM Fuel Requirement, refer to the service manual.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 1.(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE -DIAGNOSIS AND TESTING)

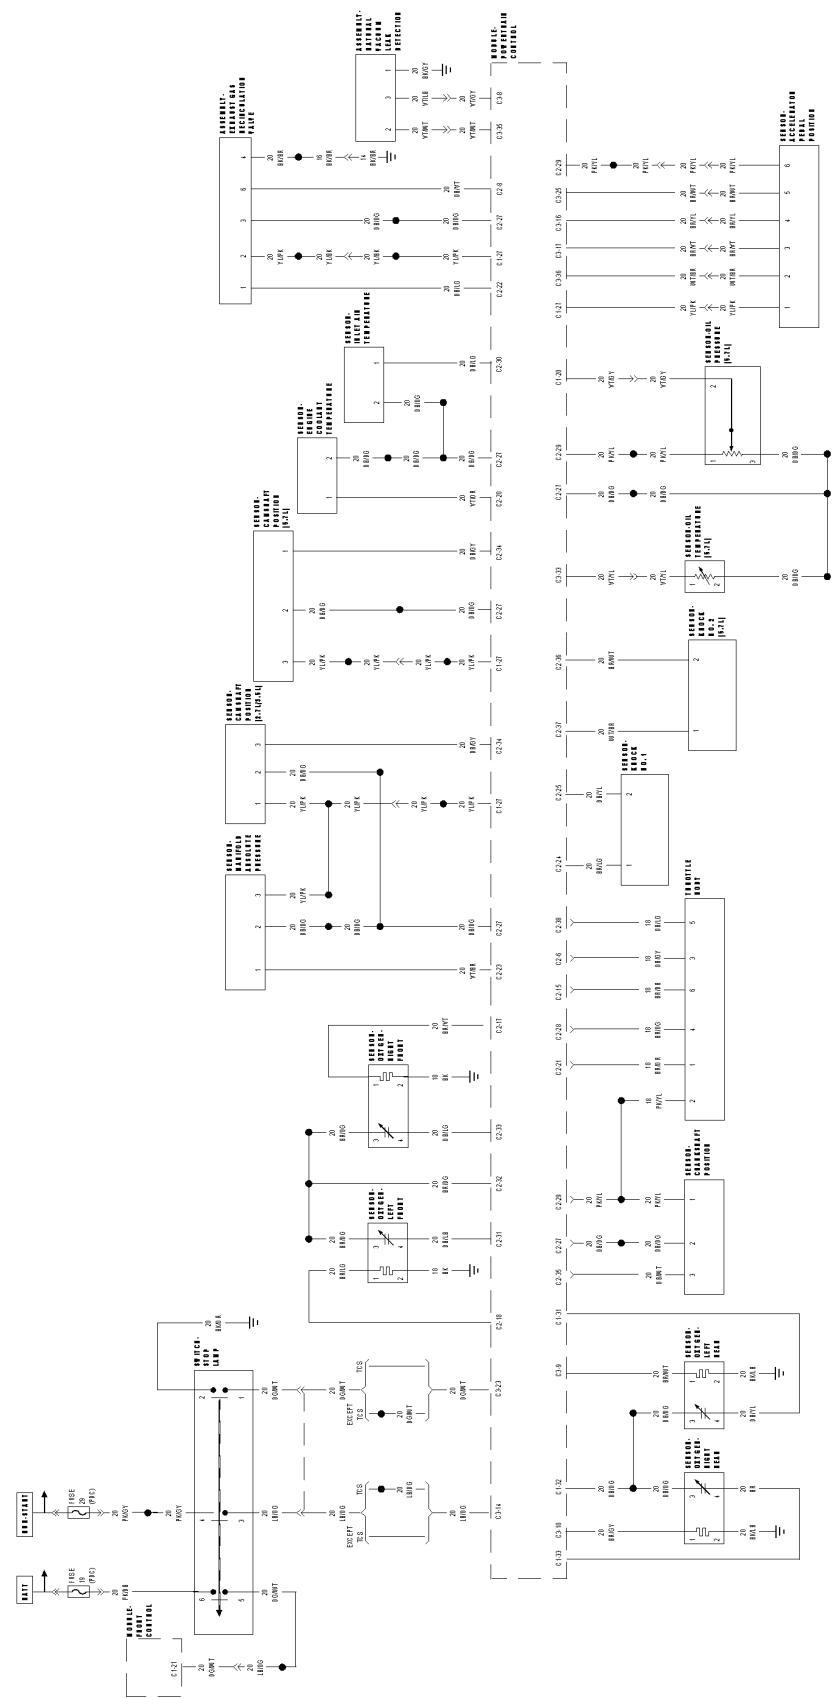

---
